

CCDAK Valid Test Sims, CCDAK Hot Spot Questions

Answer: E

Explanation: One of the benefits of using Apache Kafka for real-time data streaming is its fault-tolerance and high availability. Kafka is designed to provide durability, fault tolerance, and high availability of data streams. It can handle large volumes of data and offers high scalability and throughput. Kafka also allows for centralized message storage and processing, enabling real-time processing of data from multiple sources.

Question: 356

Which of the following is NOT a valid deployment option for Kafka?

- A. On-premises deployment
- B. Cloud deployment (e.g., AWS, Azure)
- C. Containerized deployment (e.g., Docker)
- D. Mobile deployment (e.g., Android, iOS)

Answer: D

Explanation: Mobile deployment (e.g., Android, iOS) is not a valid deployment option for Kafka. Kafka is typically deployed in server or cloud environments to handle high-throughput and real-time data streaming. It is commonly deployed on servers in on-premises data centers or in the cloud, such as AWS (Amazon Web Services) or Azure. Kafka can also be containerized using technologies like Docker and deployed in container orchestration platforms like Kubernetes. However, deploying Kafka on mobile platforms like Android or iOS is not a typical use case. Kafka is designed for server-side data processing and messaging, and it is not optimized for mobile devices.

You will notice the above features in the Confluent CCDAK Web-based format too. But the difference is that it is suitable for all operating systems. There is no need to go through time-taking installations or agitating plugins to use this format. It will lead to your convenience while preparing for the Confluent Certified Developer for Apache Kafka Certification Examination (CCDAK) certification test. Above all, it operates on all browsers.

Confluent Certified Developer for Apache Kafka (CCDAK) Certification Examination is designed for developers who wish to demonstrate their expertise in developing Apache Kafka-based applications using Confluent's platform. Confluent is a leading provider of Apache Kafka-based solutions, and the CCDAK certification confirms that developers have the necessary skills to design, develop, and troubleshoot Kafka-based applications using Confluent's platform.

Confluent CCDAK certification exam is a rigorous examination that requires candidates to pass a series of comprehensive tests. Confluent Certified Developer for Apache Kafka Certification Examination certification is intended for developers who have a deep understanding of Kafka and have experience with it. CCDAK Exam is designed to test the knowledge and skills of developers in Kafka and related technologies, and it is recognized globally as a standard for Kafka developers.

The CCDAK exam is a hands-on assessment that tests the candidate's ability to design, develop, and deploy Kafka-based applications using different programming languages, such as Java, Scala, and Python. CCDAK exam covers a wide range of topics, including Kafka architecture, data serialization and deserialization, producer and consumer APIs, stream processing, and Kafka Connect. CCDAK exam also evaluates the candidate's ability to troubleshoot common Kafka issues and optimize Kafka performance.

Confluent CCDAK Hot Spot Questions & Reliable CCDAK Test Dumps

The Confluent Certified Developer for Apache Kafka Certification Examination certification provides beginners and professionals with multiple great career opportunities. The Confluent Exam CCDAK examination is one of the most demanding Confluent tests. There are multiple benefits you can get after cracking the CCDAK test. The top-listed benefits include skill verification, high-paying jobs, bonuses, and promotions in your current organizations. All these benefits of earning the CCDAK certificate help you level up your career in the tech sector.

Confluent Certified Developer for Apache Kafka Certification Examination Sample Questions (Q123-Q128):

NEW QUESTION # 123

In Kafka Streams, by what value are internal topics prefixed by?

- **A. application.id**
- B. group.id
- C. kafka-streams-
- D. tasks-<number>

Answer: A

Explanation:

In Kafka Streams, the application.id is also the underlying group.id for your consumers, and the prefix for all internal topics (repartition and state)

NEW QUESTION # 124

Which of the following is a push query?

- A.

```
SELECT *  
FROM NUMBER_OF_TESTS  
WHERE ID='10';
```
- **B.

```
SELECT windowstart, windowend, item_id, SUM(quantity)  
FROM orders  
WINDOW TUMBLING (SIZE 20 SECONDS)  
GROUP BY item_id  
EMIT CHANGES;
```**
- C.

```
CREATE TABLE LEFT_TABLE (ID BIGINT PRIMARY KEY, NAME varchar, VALUE bigint) WITH  
(kafka_topic='left_topic', value_format='JSON', partitions=4);
```
- D.

```
CREATE STREAM STUDENTS (ID STRING KEY, SCORE INT)  
WITH (kafka_topic='students_topic', value_format='JSON', partitions=4);
```

Answer: B

NEW QUESTION # 125

Select the Kafka Streams joins that are always windowed joins.

- A. KStream-GlobalKTable
- **B. KStream-KStream join**
- C. KTable-KTable join
- D. KStream-KTable join

Answer: B

Explanation:

See <https://docs.confluent.io/current/streams/developer-guide/dsl-api.html#joining>

NEW QUESTION # 126

You need to collect logs from a host and write them to a Kafka topic named 'logs-topic'. You decide to use Kafka Connect File Source connector for this task.

What is the preferred deployment mode for this connector?

- A. SingleCluster mode
- **B. Standalone mode**
- C. Distributed mode
- D. Parallel mode

Answer: B

Explanation:

Kafka Connect can run in standalone mode or distributed mode. For simple tasks like reading logs from a file on a single host, standalone mode is recommended.

From Kafka Connect User Guide:

"Standalone mode is useful when running connectors on a single machine (e.g., for development or simple deployments like log collection from a local file)." Distributed mode is preferred for scalability and fault tolerance but overkill for this use case.

Reference: Kafka Connect User Guide > Deployment Modes

NEW QUESTION # 127

How do you create a topic named test with 3 partitions and 3 replicas using the Kafka CLI?

- A. bin/kafka-topics-create.sh --zookeeper localhost:9092 --replication-factor 3 --partitions 3 --topic test
- **B. bin/kafka-topics.sh --create --bootstrap-server localhost:9092 --replication-factor 3 --partitions 3 --topic test**
- C. bin/kafka-topics.sh --create --bootstrap-server localhost:2181 --replication-factor 3 --partitions 3 --topic test
- D. bin/kafka-topics.sh --create --broker-list localhost:9092 --replication-factor 3 --partitions 3 --topic test

Answer: B

Explanation:

As of Kafka 2.3, the kafka-topics.sh command can take --bootstrap-server localhost:9092 as an argument. You could also use the (now deprecated) option of --zookeeper localhost:2181.

NEW QUESTION # 128

.....

For everyone, time is money and life. Are you still hesitant about selecting what kind of CCDAK exam materials? We have a high reputation on the career to help our customers pass their exams and get their desired certifications. There is no exaggeration to say that you can pass the CCDAK Exam with ease after studying with our CCDAK practice guide for 20 to 30 hours. Numerous of the candidates have been benefited from our exam torrent and they obtained the achievements just as they wanted.
