

# 2V0-13.25 Exam Braindumps - 2V0-13.25 Quiz Torrent & 2V0-13.25 Exam Quiz

[Pass VMware 2V0-13.25 Exam | Latest 2V0-13.25 Dumps & Practice Exams - Cert007](#)

1.Which Broadcom solutions are essential for achieving high-speed storage access in VMware?

- A. vSAN
- B. Broadcom RAID Controller
- C. Broadcom 25GbE Ethernet Adapter
- D. Broadcom NVMe SSD

**Answer:** B, D

**Explanation:**

Broadcom RAID Controllers and NVMe SSDs are essential for high-speed storage access in VMware environments.

2.Which Broadcom components are needed to ensure optimal storage reliability in VMware environments?

- A. Broadcom RAID Controller
- B. vSAN
- C. VMware Fault Tolerance
- D. Broadcom NVMe SSD

**Answer:** A

**Explanation:**

Broadcom RAID Controllers are necessary for ensuring optimal storage reliability in VMware environments.

3.Which Broadcom products are used to ensure high availability in VMware Cloud Foundation environments?

- A. Broadcom Ethernet adapters
- B. Broadcom Fibre Channel HBAs
- C. Broadcom RAID controllers
- D. Broadcom NVMe SSDs

**Answer:** B, C

**Explanation:**

Broadcom RAID controllers and Fibre Channel HBAs enhance high availability in VMware Cloud Foundation.

4.Which Broadcom components should be prioritized when planning a VMware cloud infrastructure that needs high scalability?

- A. vSAN
- B. vSphere HA
- C. Broadcom 25GbE Ethernet Adapter
- D. Broadcom NVMe SSD

**Answer:** A, C, D

**Explanation:**

Broadcom 25GbE Ethernet Adapters, vSAN, and NVMe SSDs contribute to building a scalable VMware cloud infrastructure.

5.Which Broadcom products are essential for enhancing network performance in VMware Cloud

2 / 8

The desktop-based practice exam software is the first format that 2V0-13.25 provides to its customers. It allows candidates to track their progress from start to finish and provides an easily accessible progress report. This VMware 2V0-13.25 Practice Questions is customizable and mimics the real exam's format. It is user-friendly on Windows-based computers, and the product support staff is available to assist with any issues that may arise.

After a series of investigations and studies, we found that those students who wish to pass the 2V0-13.25 exam through their own in-depth study of the textbooks are often slack in their learning. Some students may even feel headaches when they read the content that difficult to understand in the textbooks. Our 2V0-13.25 Study Materials are excellent examination review products composed by senior industry experts that focuses on researching the mock examination products which simulate the real 2V0-13.25 test environment. And you will be more confident to pass the 2V0-13.25 exam.

**>> 2V0-13.25 Detailed Study Plan <<**

## Study 2V0-13.25 Plan & 2V0-13.25 Reliable Test Review

For this task, you need to update VMware 2V0-13.25 preparation material to get success. If applicants fail to find reliable material, they fail the VMware 2V0-13.25 examination. Failure leads to loss of money and time. You just need to rely on Itcerttest to avoid these losses. Itcerttest has launched three formats of real VMware 2V0-13.25 Exam Dumps.

## VMware 2V0-13.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>VMware Products and Solutions: This section of the exam evaluates the knowledge of VMware Solution Specialists and focuses on VMware Cloud Foundation (VCF). Candidates must be able to identify and differentiate between various VCF architecture options in given scenarios. The emphasis is on understanding the key products and how they integrate into enterprise design choices.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Plan and Design the VMware Solution: This section measures the skills of Cloud Infrastructure Designers. It focuses on gathering and analyzing business requirements and then transforming them into conceptual, logical, and physical models of VMware Cloud Foundation. Candidates are expected to identify prerequisites and make design decisions across fleet topologies, networking, management domains, workload domains, automation, and operations. The section also includes designing for availability within and across zones, creating strategies for manageability such as lifecycle, scalability, and capacity, and ensuring performance and recoverability through BCDR strategies. Additional emphasis is given to designing secure environments, workload migration strategies, and creating consumption, automation, and monitoring strategies to support modern applications and governance.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Install, Configure, Administrate the VMware Solution: This section of the exam is relevant to System Administrators. Although it has no directly testable objectives, it underlines the expectation that candidates are familiar with installation, configuration, and administration tasks that form the foundation for VMware Cloud Foundation solutions.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Troubleshoot and Optimize the VMware Solution: This section of the exam measures the skills of Operations Engineers. There are no explicitly testable objectives provided in this domain, but candidates are expected to understand troubleshooting and optimization principles to maintain the VMware environment effectively in real-world deployments.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>IT Architectures, Technologies, Standards: This section of the exam measures the skills of IT Architects and covers the ability to distinguish business requirements from technical ones. It expects candidates to understand the differences between conceptual, logical, and physical designs while also differentiating requirements, assumptions, constraints, and risks. Core concepts of availability, manageability, performance, recoverability, and security (AMPRS) are tested. Learners also need to document risk mitigation strategies, design decisions, and create a validation strategy that ties requirements to practical implementation.</li> </ul>

## VMware Cloud Foundation 9.0 Architect Sample Questions (Q90-Q95):

### NEW QUESTION # 90

An architect responsible for creating the automation design for a VMware Cloud Foundation (VCF) Private Cloud is reviewing the notes from a customer design workshop. The customer has provided the following information:

\* The customer's existing fleet management instance will be upgraded to maintain the existing process for virtual machine deployments.

\* The customer would like to limit the total active resource consumption per VCF Automation user.

\* The customer would like to ensure requests meet company requirements prior to deployment for certain users.

A combination of which two VCF Automation policies should the architect recommend to meet the customer's stated requirements? (Choose two.)

- A. Approval Policy
- B. Deployment Limit Policy
- C. IaaS Policy
- D. Lease Policy
- E. Resource Quota Policy

**Answer: A,E**

Explanation:

In VMware Cloud Foundation 9.0.4, automation and governance are enforced through VCF Automation policies built on VMware

Aria Automation Service Broker.

Two policies directly address the customer's requirements:

\* Resource Quota Policy - Controls total active resource consumption by defining limits on CPU, memory, and storage at the organization, project, or user level.

"Resource quota policies control the amount of resources that are available to your users. You define these policies to limit the resources consumed by each user, project, or the organization."

\* Approval Policy - Ensures governance and validation before resource deployment or modification.

"Approval policies are used to control deployment and day-2 action requests before they are executed.

Requests are evaluated and approved by designated users or roles to ensure they meet organizational policies." Deployment Limit Policies (option D) apply to per-deployment limits but do not govern total user-level resource consumption. Therefore, the correct combination of policies that satisfy both governance and consumption control requirements is Resource Quota Policy and Approval Policy.

References (VMware Cloud Foundation documents):

\* VMware Cloud Foundation 9.0.4 Architecture and Design Guide - Automation Governance: Resource Quota Policies and Approval Policies.

\* VMware Cloud Foundation 9.0.4 Operations Guide - Policy Configuration in VCF Automation for All Apps.

\* VMware Cloud Foundation 9.0.4 Policy Enforcement Reference - Approval Policy Enforcement Examples.

## NEW QUESTION # 91

Requirements:

\* Workloads across multiple datacenters (DC01, DC02)

\* Support two-factor authentication (2FA)

\* Reduce operational overhead

Which two design decisions should be documented for the VCF Single Sign-On (SSO) architecture?

- A. Configure all additional VCF instances in the same private cloud to point to the VIDB in the first VCF instance at DC01.
- B. Configure all additional VCF instances in the same region to point to the VIDB in the first VCF instance at DC02.
- C. Deploy VIDB in the first VCF instance management domain at DC01.
- D. Deploy VIDB in the management domain of every VCF instance in all sites.
- E. Deploy VIDB in the management domain of each VCF instance at DC02.

Answer: A,C

Explanation:

The VCF Identity Broker (VIDB) enables integration with enterprise identity systems and supports MFA.

To reduce operational overhead:

\* Deploy VIDB once in the first VCF instance at DC01.

\* Point all additional VCF instances in the same private cloud to this VIDB.

This avoids deploying and managing multiple VIDB instances, reducing lifecycle overhead while still enabling 2FA.

Options A/B introduce unnecessary duplication. Option C centralizes in DC02, but requirement specifies DC01 is primary.

## NEW QUESTION # 92

Which Broadcom solutions support the creation of a highly scalable VMware environment?

- A. Broadcom 25GbE Ethernet Adapter
- B. Broadcom NVMe SSD
- C. vSAN
- D. vSphere DRS

Answer: A,B,C

Explanation:

Broadcom 25GbE Ethernet Adapters, vSAN, and NVMe SSDs support scaling in VMware environments by improving network speed, storage capacity, and performance.

## NEW QUESTION # 93

An architect is designing a VMware Cloud Foundation (VCF)-based private cloud solution for a customer. During the requirements gathering workshop, the customer provided the following requirement:  
All SSL certificates should be provided by the company's certificate authority.  
When creating the design, how should the architect classify this stated requirement?

- A. Manageability
- B. Availability
- C. Recoverability
- D. Security

**Answer: D**

Explanation:

In VMware Cloud Foundation (VCF) 5.2, requirements are classified using design qualities as defined in VMware's architectural methodology: Availability, Manageability, Performance, Recoverability, and Security. These qualities help architects align customer needs with technical solutions. The requirement specifies that "all SSL certificates should be provided by the company's certificate authority," which involves encryption, identity verification, and trust management. Let's classify it:

Option A: Recoverability

Recoverability focuses on restoring services after failures, such as disaster recovery (DR) or failover (e.g., RTO, RPO). SSL certificates relate to securing communication, not recovery processes. The VMware Cloud Foundation 5.2 Architectural Guide defines Recoverability as pertaining to system restoration, not certificate management, making this incorrect.

Option B: Security

Security encompasses protecting the system from threats, ensuring data confidentiality, integrity, and authenticity. Requiring SSL certificates from the company's certificate authority (CA) directly relates to securing VCF components (e.g., vCenter, NSX, SDDC Manager) by enforcing trusted, organization-specific encryption and authentication. The VMware Cloud Foundation 5.2 Design Guide classifies certificate usage under Security, as it mitigates risks like man-in-the-middle attacks and aligns with compliance standards (e.g., PCI-DSS, if applicable). This is the correct classification.

Option C: Availability

Availability ensures system uptime and fault tolerance (e.g., HA, redundancy). While SSL certificates enable secure access, they don't directly influence uptime or failover. The VCF 5.2 Architectural Guide ties Availability to resilience mechanisms (e.g., clustered deployments), not security controls like certificates.

Option D: Manageability

Manageability focuses on operational ease (e.g., monitoring, automation). Using a company CA involves certificate deployment and renewal, which could relate to management processes. However, the primary intent is securing communication, not simplifying administration. VMware documentation distinguishes certificate-related requirements as Security, not Manageability, unless explicitly about operational workflows.

Conclusion:

The requirement is best classified as Security (B), as it addresses the secure configuration of SSL certificates, a core security concern in VCF 5.2.

VMware Cloud Foundation 5.2 Administration Guide ([docs.vmware.com](https://docs.vmware.com)): SSL Certificate Configuration.

## NEW QUESTION # 94

Which features of VMware vSphere are supported by Broadcom's network solutions?

- A. VMware vSphere HA
- B. VMware vSphere DRS
- C. VMware NSX
- D. VMware vSphere vMotion

**Answer: A,B,C,D**

Explanation:

Broadcom network solutions support vMotion, HA, DRS, and NSX by ensuring low-latency, high-throughput, and reliable networking.

## NEW QUESTION # 95

.....

Itcerttest is a website to provide VMware certification exam training tool for people who attend VMware certification exam examinee. Itcerttest's training tool has strong pertinence, which can help you save a lot of valuable time and energy to pass 2V0-13.25 certification exam. Our exercises and answers and are very close true 2V0-13.25 examination questions. IN a short time of using Itcerttest's simulation test, you can 100% pass the exam. So spending a small amount of time and money in exchange for such a good result is worthwhile. Please add Itcerttest's training tool in your shopping cart now.
