CrowdStrike Falcon Administrator Sample Questions (Q45-Q50):

NEW QUESTION # 45
What command should be run to verify if a Windows sensor is running?

- A. ps -ef | grep falcon
- B. sc query csagent
- C. netstat -f
- D. regedit myfile.reg

Answer: B

Explanation:
The command that should be run to verify if a Windows sensor is running is sc query csagent.
This command will display the status and information of the csagent service, which is the Falcon sensor service. The other commands are either incorrect or not applicable to Windows sensors.

NEW QUESTION # 46
Which is the correct order for manually installing a Falcon Package on a macOS system?

- A. Install the Falcon package, then register the Falcon Sensor via the registration package
- B. Register the Falcon Sensor via command line, then install the Falcon package
- C. Register the Falcon Sensor via the registration package, then install the Falcon package
- D. Install the Falcon package, then register the Falcon Sensor via command line

Answer: D

Explanation:
The correct order for manually installing a Falcon Package on a macOS system is to install the Falcon package, then register the Falcon Sensor via command line. The Falcon package contains the sensor binary and the kernel extension, while the registration package contains the customer ID and the sensor group ID. The registration package is not required for macOS systems, as the registration information can be provided via command line after installing the Falcon package.

NEW QUESTION # 47
Custom IOA rules are defined using which syntax?

- A. PowerShell
- B. Yara
- C. Glob
- D. Regex

Answer: D

NEW QUESTION # 48
Which of the following best describes what the Uninstall and Maintenance Protection setting controls within your Sensor Update Policy?

- A. Prevents modification of sensor update policy
- B. Prevents automatic updates of the sensor
- C. Prevents unauthorized uninstallation of the sensor
- D. Prevents the sensor from entering Reduced Functionality Mode

Answer: C

Explanation:
The option that best describes what the Uninstall and Maintenance Protection setting controls within your Sensor Update Policy is that it prevents unauthorized uninstallation of the sensor. The Uninstall and Maintenance Protection setting is a feature that adds an extra layer of security to the sensor by requiring a maintenance token to uninstall or update the sensor manually. The maintenance token is a unique code that can be generated by a Falcon Administrator or a Real Time Response - Administrator in the Falcon console. Without a valid maintenance token, the sensor cannot be uninstalled or updated by anyone, including local administrators or malware.

NEW QUESTION # 49

Which of the following controls the speed in which your sensors will receive automatic sensor updates?

- A. Sensor Update Throttling
- B. Sensor Update Policy
- C. Channel File Update Throttling
- D. Maintenance Tokens

Answer: A

Explanation:
The option that controls the speed in which your sensors will receive automatic sensor updates is Sensor Update Throttling. Sensor Update Throttling allows you to limit the number of sensors that can download a new sensor version per hour. This way, you can avoid network congestion or bandwidth issues caused by simultaneous sensor updates. You can configure the Sensor Update Throttling setting in the Sensor Update Policy for each platform.

NEW QUESTION # 50

......

Failure makes people depressed especially for working engineers. If your test score effects your work and you make mistakes, it is lost than gained. The best method for working people is to purchase valid CrowdStrike CCFA-200b test questions and answers. It only takes you a little money to solve a big difficult for you.
