

# CCRN-Pediatric Certification Exam Dumps | CCRN-Pediatric Sample Questions Pdf

## CCRN PRACTICE QUESTIONS WITH 100% CORRECT ANSWERS WITH RATIONALES UPDATED VERSION 2024 GUARANTEED A+

1. A patient in the ED with complaints of chest pain. The 12-lead EKG shows ST elevation in leads V3 and V4. Occlusion of the affected coronary artery most likely would affect perfusion to which portion of the conduction system?

- A. Sinoatrial (SA) node
- B. Bachmann's bundle
- C. Atrioventricular (AV) node
- D. Bundle of His - Correct Answer-LAD so D. bundle of his

2. Which of the following is the preferred lead for ST segment monitoring for a patient with a suspected RCA occlusion?

- A. I
- B. aVR
- C. III
- D. V1 - Correct Answer-c. III

3. Which of the following is not a manifestation of hypertrophic cardiomyopathy?

- A. Syncope
- B. Murmur that increases with squatting
- C. Chest pain
- D. Sudden cardiac death - Correct Answer-B

Classic manifestations of hypertrophic cardiomyopathy are chest pain, syncope, and an aortic stenosis type of murmur that decreases when the patient is in a squatting position. The first manifestation of this condition is occasionally sudden cardiac death during exercise.

4. In which quadrant is the mean QRS complex axis located if the QRS complex is predominantly positive in lead I and negative in lead aVF?

- A. Normal quadrant
- B. Left axis deviation quadrant
- C. Right axis deviation quadrant
- D. Indeterminant quadrant - Correct Answer-B

5. Because the positive of lead I is the left arm, if the QRS complex is upright in lead I, the mean QRS axis is to the left. Because the positive of lead aVF (a unipolar lead) is at the foot, if the QRS complex is negative in lead aVF, the mean QRS axis is upward

AACN CCRN-Pediatric Certification Exam is a rigorous certification program that tests the knowledge and skills of nurses who work in pediatric critical care settings. Critical Care Nursing Exam certification program is administered by the American Association of Critical-Care Nurses (AACN) and is designed to provide nurses with a standardized measure of their knowledge and skills in pediatric critical care nursing. Nurses who pass the exam earn the CCRN-Pediatric Certification, which demonstrates that they have achieved a high level of competence in providing care to critically ill children and their families.

Ethical principles for caregivers. The nurse practitioner demonstrates compassion and also considers each individual's intrinsic self-respect, value and distinctive traits. The primary commitment of the registered nurse is to the individual, family, team, region or community. The nurse promotes and protects the legal rights, health and wellbeing of the community. The nurse is responsible, accountable, and obliged to use the nursing technique; takes choices; also acts in conformity with the duty to promote health and well-being and optimum treatment. **AACN CCRN Pediatric exam dumps** is the best practicing way to pass the examination.

The nurse owes itself to the exact same responsibilities towards others, including the duty to encourage health and well-being, the preservation of individuality and also consistency, the preservation of characteristics and professional and specialized development. The nurse creates, maintains and enhances the professional environment of the work environment as well as circumstances of work that contributes to safe, great healthcare. The nurse advances the career in all functions as well as situations, as well as academic questions, development of expert criteria and also creation of healthcare and an insurance coverage, with the help of **AACN CCRN Pediatric exam dumps**. The professional caregiver works together with other fitness & wellbeing profession and the patients to safeguard human dignity, encourage communication on health and minimize differences in health and well-being. The medical profession, along with its professional organizations, should communicate nursing values, maintain the honesty of the profession and integrate concepts of social responsibility into healthcare and health and wellbeing plans. 2015 U.S. Organization of Nurses.

### AACN Critical Care Nursing Exam Sample Questions (Q134-Q139):

#### NEW QUESTION # 134

An infant was scheduled to receive the first series of immunizations. Before giving them, the nurse should discuss the possible reactions that may occur because those reactions are:

- A. serious and require hospitalization
- B. sometimes causes ulceration at injection site
- **C. quite common and may be local or systemic.**
- D. usually responsible for permanent neurological disturbances

**Answer: C**

Explanation:

Explanation: The reactions are quite common and may be local or systemic. Mild reactions are redness, and induration at the injection site, slight fever, and irritability.

#### NEW QUESTION # 135

The nurse scans the laboratory values of a pediatric client with rheumatic fever. Which data should be treated as insignificant:

- A. positive antistreptolysin titer
- B. elevated ESR
- **C. elevated reticulocyte count**
- D. positive C-reactive protein

**Answer: C**

Explanation:

Explanation: This is related to anemia. There would be a positive titer as a result of previous exposure to streptococcal infection; positive C-reactive protein and elevated ESR are indicative of inflammatory process.

#### NEW QUESTION # 136

A 10-year-old child presents with peri-umbilical pain, rebound tenderness, nausea, and fever up to 102° F (38.9°C). The pain prevents him from standing up straight. Which of the following should a nurse anticipate first?

- A. Initiate oral rehydration

- B. Consult pediatric surgery
- C. Insert a nasogastric tube
- D. Administer antiemetics

**Answer: B**

Explanation:

This child presents with classic signs of acute appendicitis potentially progressing to peritonitis or perforation. The priority is to consult pediatric surgery immediately, as delaying surgical evaluation can lead to worsening complications, including sepsis.

"Clinical presentation of acute appendicitis includes right lower quadrant or peri-umbilical pain, nausea, fever, and rebound tenderness. Surgical consultation is the priority in suspected appendicitis." (Referenced from CCRN Pediatric - Direct Care: Gastrointestinal, Acute Abdomen and Surgical Emergencies)

#### NEW QUESTION # 137

One hour after receiving naloxone, a child becomes lethargic again and has a RR of 6. The nurse should anticipate:

- A. Administration of naloxone (Narcan)
- B. Administration of glucose
- C. Nasal BiPAP
- D. Intubation

**Answer: A**

Explanation:

Naloxone has a shorter half-life than many opioids. After the initial reversal, the opioid's effects can resurge, leading to respiratory depression and sedation. This is called re-sedation or opioid re-narcotization. Re-dosing or initiating analoxone infusion may be required.

"Recurrent sedation or respiratory depression after naloxone administration suggests opioid duration outlasting naloxone's half-life. Repeat dosing or continuous infusion may be necessary." (Referenced from CCRN Pediatric - Direct Care: Multisystem, Opioid Toxicity and Naloxone Pharmacology)

#### NEW QUESTION # 138

Nurse Cathy is assigned for a 2 and half year-old who is being treated with Chelation Therapy, calcium disodium edetate, due to poisoning. Cathy should be alerted for which of the following side effect?

- A. Ototoxicity
- B. Hepatomegaly
- C. Neurotoxicity
- D. Nephrotoxicity

**Answer: D**

Explanation:

Explanation: Nephrotoxicity is a common side effect of calcium disodium edetate

#### NEW QUESTION # 139
