Are you looking for the best study materials for the Certificate of Cloud Security Knowledge (v4.0) Exam exam? DumpsFree is the only place to go! You may be fully prepared to pass the Certificate of Cloud Security Knowledge (v4.0) Exam (CCSK) test with their comprehensive Cloud Security Alliance CCSK exam questions. DumpsFree provides the Certificate of Cloud Security Knowledge (v4.0) Exam (CCSK) Exam Questions and answers guide in PDF format, making it simple to download and use on any

device. You can study at your own pace and convenience with the Cloud Security Alliance CCSK PDF Questions, without having to attend any in-person seminars. This means you may study for the CCSK exam from the comfort of your own home whenever you want.

Preparing for the CCSK certification exam requires a solid understanding of cloud security concepts and best practices. Candidates can use various study resources, including online courses, study guides, practice exams, and training programs. The CCSK Certification Exam is an excellent way for IT professionals to showcase their cloud security expertise and advance their careers in the rapidly growing field of cloud computing.

Cloud Security Alliance Certificate of Cloud Security Knowledge (v4.0) Exam Sample Questions (Q134-Q139):

NEW QUESTION # 134

What is the primary goal of implementing DevOps in a software development lifecycle?

- A. To reduce the development team size by merging roles
- B. To eliminate the need for IT operations by automating all tasks
- C. To create a separation between development and operations
- D. To enhance collaboration between development and IT operations for efficient delivery

Answer: D

Explanation:

DevOps aims to improve collaboration and integration between development and operations teams, streamlining delivery and enhancing software quality. Reference: [CCSK Study Guide, Domain 10 - DevOps & DevSecOps]

NEW QUESTION # 135

Which of the following is an effective way of segregating different cloud networks and datacenters in a hybrid cloud environment?

- A. Dedicated Hosting
- B. Virtual LANs
- C. Bastion Virtual Network
- D. Virtual Private Networks

Answer: C

Explanation:

One emerging architecture for hybrid cloud connectivity is "bastion" or "transit" virtual networks:

. This scenario allows you to connect multiple, different cloud networks to a data center using a single hybrid connection. The cloud user builds a dedicated virtual network for the hybrid connection and then peers any other networks through the designated bastion network.

. Second-level networks connect to the data center through the bastion network, but since they aren't peered to each other they can't talk to each other and are effectively segregated. Also, you can deploy different security tools, firewall rulesets, and Access Control Lists in the bastion network to further protect traffic in and out of the hybrid connection.

NEW QUESTION # 136

What is the primary purpose of Identity and Access Management (IAM) systems in a cloud environment?

- A. To provide a backup solution for cloud data
- B. To monitor network traffic for suspicious activity
- C. To govern identities' access to resources in the cloud
- D. To encrypt data to ensure its confidentiality

Answer: C

Explanation:

The primary purpose of Identity and Access Management (IAM) systems in a cloud environment is to govern and control which identities (users, groups, or services) have access to which resources within the cloud. IAM systems ensure that only authorized

users and services can access specific cloud resources, and they help enforce security policies such as least privilege access, role-based access control (RBAC), and multi-factor authentication (MFA).

NEW QUESTION # 137

An adversary uses a cloud Platform to launch a DDoS attack against XYZ company. This type of risk is termed as:

- A. Data Breaches
- B. Account Hijacking
- C. Malicious Insider
- D. Abuse of Cloud services

Answer: D

Explanation:

Malicious actors may leverage cloud computing resources to target users, Organizations or other cloud providers. Examples of misuse of cloud service-based resources include launching DDoS attacks, email spam and phishing campaigns; "mining" for digital currency; large-scale automated click fraud; brute- force compute attacks of stolen credential databases; and hosting of malicious or pirated content.

NEW QUESTION # 138

Which of the vulnerabilities is inherited from general software development practice in PaaS environment?

- A. Cross
- B. DNS spoofing
- C. DDoS
- D. Backdoors

Answer: D

Explanation:

As a general practice of software development. Developer tend to leave backdoors so that they can come back later to fix issues.
