NEW QUESTION # 312

Which of the following best describes the concept of AI as a Service (AIaaS)?

- **A. Hosting and running AI models with customer-built solutions**
- B. Offering pre-built AI models to third-party vendors
- C. Providing software as an AI model with no customization options
- D. Selling AI hardware to enterprises for internal use

Answer: A

Explanation:

AI as a Service (AIaaS) refers to cloud-based services that provide organizations with access to pre-built or customizable AI models and infrastructure. These services allow businesses to host and run AI models, often with the ability to tailor them to meet their specific needs. AIaaS enables customers to leverage AI capabilities without needing to build the underlying infrastructure or develop complex AI models from scratch.

NEW QUESTION # 315

When comparing different Cloud Service Providers (CSPs), what should a cybersecurity professional be mindful of regarding their organizational structures?

- A. All CSPs use the same organizational structure and terminology
- **B. Different CSPs may have similar structures but use varying terminology**
- C. Terminology difference in CSPs does not affect cybersecurity practices.
- D. CSPs have vastly different organizational structures and identical terminology

Answer: B

Explanation:

When comparing different Cloud Service Providers (CSPs), it is important to recognize that while they may have similar organizational structures - such as divisions for security, compliance, and support - they often use varying terminology to describe their services, roles, and responsibilities. Understanding these differences is crucial for cybersecurity professionals to ensure proper alignment of security practices, controls, and policies across different cloud platforms.

CSPs typically have variations in organizational structure and terminology. While the structure can vary, it is not usually "vastly" different in terms of core functions. Differences in terminology can have implications for understanding security roles, policies, and practices, affecting how cybersecurity tasks are performed.
