# Free PDF Quiz 2026 Microsoft AZ-305: The Best Certification Designing Microsoft Azure Infrastructure Solutions Dump
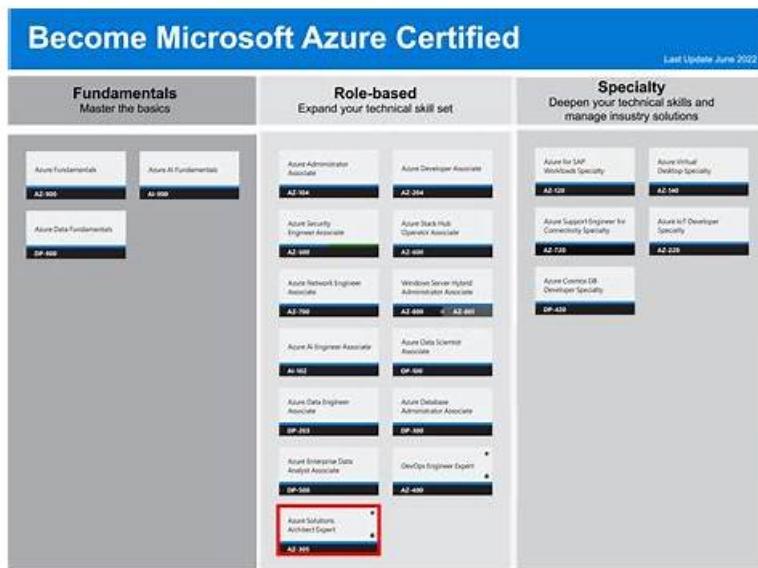

BTW, DOWNLOAD part of Free4Dump AZ-305 dumps from Cloud Storage: https://drive.google.com/open?id=1inYgGhCHhsBnQ-_sjx1sWaTaaeWfJTex

Our AZ-305 training guide always promise the best to service the clients. We are committing in this field for many years and have a good command of the requirements of various candidates. Carefully testing and producing to match the certified quality standards of AZ-305 Exam Materials, we have made specific statistic researches on the AZ-305 practice materials. And our pass rate of the AZ-305 study engine is high as 98% to 100%.

Microsoft AZ-305 certification exam covers various topics related to Azure infrastructure design. These topics include designing and implementing Azure compute, storage, networking, and security solutions. AZ-305 exam also covers hybrid and migration scenarios, Azure governance, and management solutions. AZ-305 Exam is designed to test the candidate's ability to design and implement solutions that meet the business requirements of an organization.

2026 Certification AZ-305 Dump Pass Certify | Latest AZ-305 Dumps Discount: Designing Microsoft Azure Infrastructure Solutions

We always aim at improving our users' experiences. You can download the PDF version demo before you buy our AZ-305 test guide, and briefly have a look at the content and understand the AZ-305 exam meanwhile. After you know about our AZ-305 actual questions, you can decide to buy it or not. The process is quiet simple, all you need to do is visit our website and download the free demo. That would save lots of your time, and you'll be more likely to satisfy with our AZ-305 Test Guide.

Microsoft AZ-305 exam is an essential certification for IT professionals who want to specialize in designing Azure infrastructure solutions. AZ-305 exam covers a wide range of topics, including Azure compute, storage, networking, security, and monitoring. Passing AZ-305 Exam demonstrates that the candidate has the skills and knowledge required to design and implement efficient Azure infrastructure solutions that meet the needs of their organization.

Microsoft Designing Microsoft Azure Infrastructure Solutions Sample Questions (Q156-Q161):

NEW QUESTION # 156
You have the resources shown in the following table.

Name	Type	Resource group
VM1	Azure virtual machine	RG1
VM2	On-premises virtual machine	Not applicable

You create a new resource group in Azure named RG2.

You need to move the virtual machines to RG2.

What should you use to move each virtual machine? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

VM1:
- Azure Arc
- **Azure Lighthouse**
- Azure Migrate
- Azure Resource Mover
- The Data Migration Assistant (DMA)

VM2:
- Azure Arc
- Azure Lighthouse
- **Azure Migrate**
- Azure Resource Mover
- The Data Migration Assistant (DMA)

Answer:

Explanation:

VM1:
- Azure Arc
- **Azure Lighthouse**
- Azure Migrate
- Azure Resource Mover
- The Data Migration Assistant (DMA)

VM2:
- Azure Arc
- Azure Lighthouse
- **Azure Migrate**
- Azure Resource Mover
- The Data Migration Assistant (DMA)

Explanation:

VM1: Azure Lighthouse

VM2: Azure Migrate

NEW QUESTION # 157

You plan to deploy an Azure web app named Appl that will use Azure Active Directory (Azure AD) authentication.

App1 will be accessed from the internet by the users at your company. All the users have computers that run Windows 10 and are joined to Azure AD.

You need to recommend a solution to ensure that the users can connect to App1 without being prompted for authentication and can access App1 only from company-owned computers.

What should you recommend for each requirement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Box 1: An Azure AD app registration

Azure active directory (AD) provides cloud based directory and identity management services. You can use azure AD to manage users of your application and authenticate access to your applications using azure active directory.

You register your application with Azure active directory tenant.

Box 2: A conditional access policy

Conditional Access policies at their simplest are if-then statements, if a user wants to access a resource, then they must complete an action.

By using Conditional Access policies, you can apply the right access controls when needed to keep your organization secure and stay out of your user's way when not needed.

Reference:

https://codingcanvas.com/using-azure-active-directory-authentication-in-your-web-application/

https://docs.microsoft.com/en-us/azure/active-directory/conditional-access/overview
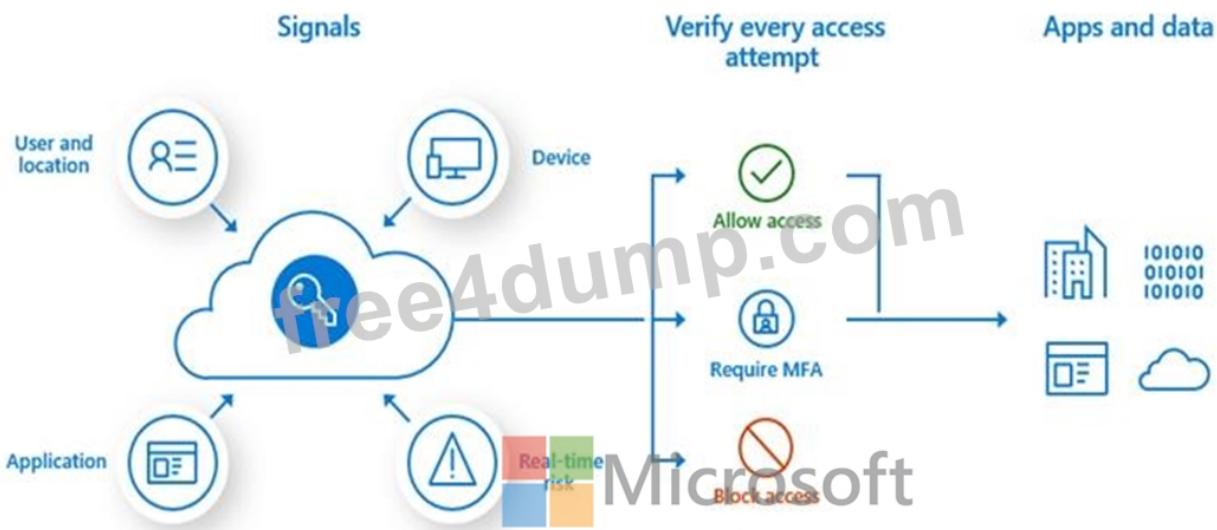

https://docs.microsoft.com/en-us/powerapps/developer/data-platform/walkthrough-register-app-azure-active-directory#:~:text=Create%20an%20application%20registration%201%20Create%20an%20application,the%20options%20and%20click%20on%20Add%20permissions.%20

"After consenting to use their Dataverse account with the ISV's application, end users can connect to Dataverse environment from external application. The consent form is not displayed again to other users after the first user who has already consented to use the ISV's app. Apps registered in Azure Active Directory are multi-tenant, which implies that other Dataverse users from other tenant can connect to their environment using the ISV's app."

NEW QUESTION # 158

Your company has an existing web app that runs on Azure virtual machines.

You need to ensure that the app is protected from SQL injection attempts and uses a layer-7 load balancer.

The solution must minimize disruptions to the code of the app.

What should you recommend? To answer, drag the appropriate services to the correct targets. Each service may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Services	Answer area
Web Application Firewall (WAF)	Azure service: Azure Application Gateway
Azure Application Gateway	Feature: Web Application Firewall (WAF)
Azure Load Balancer	
Azure Traffic Manager	
SSL offloading	
URL-based content routing	

Explanation:

Services	Answer area
Web Application Firewall (WAF)	Azure service: Azure Application Gateway
Azure Application Gateway	Feature: Web Application Firewall (WAF)
Azure Load Balancer	
Azure Traffic Manager	
SSL offloading	
URL-based content routing	

NEW QUESTION # 159

Your on-premises network contains a file server named Server1 that stores 500 GB of data.

You need to use Azure Data Factory to copy the data from Server1 to Azure Storage.

You add a new data factory.

What should you do next? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

From Server1:
- Install an Azure File Sync agent
- Install a self-hosted integration runtime
- Install the File Server Resource Manager role service

From the data factory:
- Create a pipeline
- Create an import/export job
- Provision an Azure-SQL Server Integration Services (SSIS) integration runtime

Answer:

Explanation:

From Server1: ▼
- Install an Azure File Sync agent
- Install a self-hosted integration runtime
- Install the File Server Resource Manager role service

From the data factory: ▼
- Create a pipeline
- Create an import/export job
- Provision an Azure-SQL Server Integration Services (SSIS) integration runtime

Explanation:

From Server1: ▼
- Install an Azure File Sync agent
- Install a self-hosted integration runtime
- Install the File Server Resource Manager role service

From the data factory: ▼
- Create a pipeline
- Create an import/export job
- Provision an Azure-SQL Server Integration Services (SSIS) integration runtime

Box 1: Install a self-hosted integration runtime

The Integration Runtime is a customer-managed data integration infrastructure used by Azure Data Factory to provide data integration capabilities across different network environments.

Box 2: Create a pipeline

With ADF, existing data processing services can be composed into data pipelines that are highly available and managed in the cloud. These data pipelines can be scheduled to ingest, prepare, transform, analyze, and publish data, and ADF manages and orchestrates the complex data and processing dependencies References:

https://docs.microsoft.com/en-us/azure/machine-learning/team-data-science-process/move-sql-azure-adf

https://docs.microsoft.com/pl-pl/azure/data-factory/tutorial-hybrid-copy-data-tool syu31svc 3 months, 4 weeks ago

https://docs.microsoft.com/en-us/azure/data-factory/create-self-hosted-integration-runtime?tabs=data-factory

"A self-hosted integration runtime can run copy activities between a cloud data store and a data store in a private network"

https://docs.microsoft.com/en-us/azure/data-factory/introduction

"With Data Factory, you can use the Copy Activity in a data pipeline to move data from both on-premises and cloud source data stores to a centralization data store in the cloud for further analysis"

NEW QUESTION # 160

You are designing an order processing system in Azure that will contain the Azure resources shown in the following table.

Name	Type	Purpose
App1	Web app	Processes customer orders
Function1	Function	Check product availability at vendor 1
Function2	Function	Check product availability at vendor 2
storage1	Storage account	Stores order processing logs

The order processing system will have the following transaction flow:

* A customer will place an order by using App1.

* When the order is received, App1 will generate a message to check for product availability at vendor 1 and vendor 2.

* An integration component will process the message, and then trigger either Function1 or Function2 depending on the type of order.

* Once a vendor confirms the product availability, a status message for App1 will be generated by Function1 or Function2.

* All the steps of the transaction will be logged to storage1.

Which type of resource should you recommend for the integration component?

D18912E1457D5D1DDCBD40AB3BF70D5D

Which type of resource should you recommend for the integration component?

- A. an Azure Data Factory pipeline
- B. an Azure Event Hubs capture
- C. an Azure Service Bus queue
- D. an Azure Event Grid domain

Answer: A

Explanation:
Explanation
A data factory can have one or more pipelines. A pipeline is a logical grouping of activities that together perform a task.
The activities in a pipeline define actions to perform on your data.
Data Factory has three groupings of activities: data movement activities, data transformation activities, and control activities.
Azure Functions is now integrated with Azure Data Factory, allowing you to run an Azure function as a step in your data factory pipelines.
