Free PDF Accurate Amazon - AWS-Certified-Developer-Associate - AWS Certified Developer Associate Exam (DVA-C02) Exam Simulator

We can promise that you would like to welcome this opportunity to kill two birds with one stone. If you choose our AWS-Certified-Developer-Associate Test Questions as your study tool, you will be glad to study for your exam and develop self-discipline, our AWS-Certified-Developer-Associate latest question adopt diversified teaching methods, and we can sure that you will have passion to learn by our products. We believe that our products will help you successfully pass your exam and hope you will like our product.

Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q332-Q337):

NEW QUESTION # 332

An application running on Amazon EC2 instances must access objects within an Amazon S3 bucket that are encrypted using server-side encryption using AWS KMS encryption keys (SSE-KMS). The application must have access to the customer master key

(CMK) to decrypt the objects.

Which combination of steps will grant the application access? (Select TWO.)

- A. Grant access to the key in the IAM EC2 role attached to the application's EC2 instances.
- B. Grant access to the key in the S3 bucket's ACL
- **C. Write an S3 bucket policy that grants the bucket access to the key.**
- **D. Create a Systems Manager parameter that exposes the KMS key to the EC2 instances.**
- E. Write a key policy that enables IAM policies to grant access to the key.

Answer: C,D

NEW QUESTION # 333

A developer is automating a new application deployment with AWS Serverless Application Model (AWS SAM). The new application has one AWS Lambda function and one Amazon S3 bucket. The Lambda function must access the S3 bucket to only read objects. How should the developer configure AWS SAM to grant the necessary read privilege to the S3 bucket?

- A. Create an Amazon Simple Queue Service (SQS) topic for only S3 object reads. Reference the topic in the template.
- B. Add a custom S3 bucket policy to the Lambda function.
- C. Reference a second Lambda authorizer function.
- **D. Add the S3ReadPolicy template to the Lambda function's execution role.**

Answer: D

NEW QUESTION # 334

A Developer is building a three-tier web application that should be able to handle a minimum of 5000 requests per minute. Requirements state that the web tier should be completely stateless while the application maintains session state for the users. How can session data be externalized, keeping latency at the LOWEST possible value?

- A. Implement a shared file system solution across the underlying Amazon EC2 instances, then implement session handling at the application level to leverage the shared file system for session data storage.
- **B. Create an Amazon RDS instance, then implement session handling at the application level to leverage a database inside the RDS database instance for session data storage.**
- C. Create an Amazon DynamoDB table, then implement session handling at the application level to leverage the table for session data storage.
- D. Create an Amazon ElastiCache Memcached cluster, then implement session handling at the application level to leverage the cluster for session data storage.

Answer: B

Explanation:

NEW QUESTION # 335

A company needs to harden its container images before the images are in a running state. The company's application uses Amazon Elastic Container Registry (Amazon ECR) as an image registry, Amazon Elastic Kubernetes Service (Amazon EKS) for compute, and an AWS CodePipeline pipeline that orchestrates a continuous integration and continuous delivery (CI/CD) workflow. Dynamic application security testing occurs in the final stage of the pipeline after a new image is deployed to a development namespace in the EKS cluster. A developer needs to place an analysis stage before this deployment to analyze the container image earlier in the CI/CD pipeline.

Which solution will meet these requirements with the MOST operational efficiency?

- A. Build the container image and run the docker scan command locally. Mitigate any findings before pushing changes to the source code repository. Write a pre-commit hook that enforces the use of this workflow before commit.
- **B. Add an action to the deployment stage of the pipeline so that the action occurs before the deployment to the EKS cluster. Configure ECR basic image scanning to scan on image push. Use an AWS Lambda function as the action provider. Configure the Lambda function to check the scan results and to fail the pipeline if there are findings.**
- C. Create a new CodePipeline stage that occurs after source code has been retrieved from its repository.

Run a security scanner on the latest revision of the source code. Fail the pipeline if there are findings.

- D. Create a new CodePipeline stage that occurs after the container image is built. Configure ECR basic image scanning to scan on image push. Use an AWS Lambda function as the action provider. Configure the Lambda function to check the scan results and to fail the pipeline if there are findings.

Answer: B

NEW QUESTION # 336

A user has created an EBS volume with 1000 IOPS. What is the average IOPS that the user will get for most of the year as per EC2 SLA if the instance is attached to the EBS optimized instance?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

As per AWS SLA if the instance is attached to an EBS-Optimized instance, then the Provisioned IOPS volumes are designed to deliver within 10% of the provisioned IOPS performance 99.9% of the time in a given year. Thus, if the user has created a volume of 1000 IOPS, the user will get a minimum 900 IOPS 99.9% time of the year.
