Marvelous D-UN-DY-23 Valid Exam Tips, New D-UN-DY-23 Test Duration

The competition in the EMC field is rising day by day and candidates around the globe are striving to validate their capabilities. Because of the rising competition, candidates lack opportunities to pursue their goals. That is why has launched the EMC D-UN-DY-23 Exam to assess your capabilities and give you golden career opportunities. Getting a Dell Unity Deploy 2023 Exam (D-UN-DY-23) certification after passing the EMC D-UN-DY-23 exam is proof of the capabilities of a candidate.

EMC Dell Unity Deploy 2023 Exam Sample Questions (Q211-Q216):

NEW QUESTION # 211

What are two prerequisites when creating host configuration for NFS client? (Choose two.)

- A. Tenant information
- **B. Hostname**
- **C. Network Address**
- D. Subnet access

Answer: B,C

Explanation:

Explanation

Host configuration is the process of defining the host properties and access permissions for a host that connects to the Dell Unity XT system. For NFS clients, the host configuration requires two prerequisites:

Network Address: The network address is the IP address or the subnet mask of the NFS client that identifies the host on the network. The network address is used to register the host on the Dell Unity XT system and to grant access to the NFS filesystems.

Hostname: The hostname is the name of the NFS client that is resolved by the DNS server or the local hosts file. The hostname is used to display the host information on the Unisphere UI and to enable host monitoring and alerting.

NEW QUESTION # 212

Which FAST VP operation can be performed from the System Settings window?

- A. Cancel data relocation operations
- B. Manually start data relocation
- **C. Modify data relocation schedule**
- D. Delete snapshots from the tier

Answer: C

NEW QUESTION # 213

How is encryption set for a Unity storage system?

- **A. First time the license is applied**
- B. Automatically set at the factory
- C. Clicking the "Mode" checkbox on the Manage Encryption page
- D. Selecting "Status" on the Manage Encryption page

Answer: A

NEW QUESTION # 214

An administrator has been asked to install a NetWorker Virtual Edition (NVE) in the VMware vSphere environment. They successfully deployed the NVE OVA option from vSphere using the OVF template. When they try to run NVEconfig to configure the appliance, it fails with runtime errors.

What is the most likely cause of the errors?

- A. Invalid Tomcat Keystore password
- B. Missing language packs
- **C. Incorrect DNS resolution**
- D. Unsupported Authc Service password

Answer: C

NEW QUESTION # 215

An administrator has configured a Host Group to have access to a storage object.

What are two benefits of this configuration? (Choose two.)

- A. Ensures that snapshots are applied to all LUNs in the group
- B. Ensures that block storage is replicated to the same hosts
- C. Provides multiple hosts access to the same VMFS Datastores
- D. Provides multiple hosts access to the same LUNs
- E. Provides multiple hosts the same access to NFS Filesystems

Answer: C,D

Explanation:

Explanation

A Host Group is a logical grouping of hosts that share the same access permissions to storage objects, such as LUNs, VMFS Datastores, or NFS Filesystems. By configuring a Host Group, an administrator can simplify the management of multiple hosts and ensure consistent access to the storage resources. Some of the benefits of using a Host Group are:

Provides multiple hosts access to the same VMFS Datastores: A VMFS Datastore is a block-based storage object that is formatted with the VMware File System (VMFS) and used to store virtual machine files. A VMFS Datastore can be shared by multiple hosts that are part of a VMware cluster. By adding these hosts to a Host Group and assigning the VMFS Datastore to the Host Group, the administrator can ensure that all the hosts have the same access permissions and can access the virtual machines on the Datastore.

Provides multiple hosts access to the same LUNs: A LUN is a block-based storage object that is presented to a host as a SCSI device. A LUN can be shared by multiple hosts that have the same operating system and use a cluster-aware file system. By adding these hosts to a Host Group and assigning the LUN to the Host Group, the administrator can ensure that all the hosts have the same access permissions and can access the data on the LUN.
