

# Reliable Amazon SOA-C03 Test Simulator - SOA-C03 Valid Exam Cost

What's more, part of that TrainingDumps SOA-C03 dumps now are free: <https://drive.google.com/open?id=1Y4c9uVG5VWD-bWFwSBF4wakYKLu1g71X>

According to various predispositions of exam candidates, we made three versions of our SOA-C03 study materials for your reference: the PDF, Software and APP online. And the content of them is the same though the displays are different. Untenable materials may waste your time and energy during preparation process. But our SOA-C03 Practice Braindumps are the leader in the market for ten years. As long as you try our SOA-C03 exam questions, we believe you will fall in love with it.

Our SOA-C03 practice materials are distributed at acceptable prices. These interactions have inspired us to do better. Now passing rate of them has reached up to 98 to 100 percent. By keeping minimizing weak points and maiming strong points, our SOA-C03 Exam Materials are nearly perfect for you to choose. As a brand now, many companies strive to get our SOA-C03 practice materials to help their staffs achieve more certifications for our quality and accuracy.

>> **Reliable Amazon SOA-C03 Test Simulator** <<

## Amazon SOA-C03 Valid Exam Cost & SOA-C03 Test Practice

Our APP version of SOA-C03 exam questions can support almost any electronic device, from iPod, telephone, to computer and so on. You can use Our SOA-C03 test torrent by your telephone when you are travelling far from home; I think it will be very convenient for you. You can also choose to use our SOA-C03 Study Materials by your computer when you are at home. You just need to download the online version of our SOA-C03 study materials, which is not limited to any electronic device and support all electronic equipment in anywhere and anytime.

## Amazon AWS Certified CloudOps Engineer - Associate Sample Questions (Q206-Q211):

### NEW QUESTION # 206

A company has a web application that is experiencing performance problems many times each night. A root cause analysis reveals sudden increases in CPU utilization that last 5 minutes on an Amazon EC2 Linux instance. A CloudOps engineer must find the process ID (PID) of the service or process that is consuming more CPU.

What should the CloudOps engineer do to collect the process utilization information with the LEAST amount of effort?

- A. Use the default Amazon CloudWatch CPUUtilization metric.
- B. Configure an AWS Lambda function to run every minute to capture the PID and send a notification.
- C. Log in to the EC2 instance each night and run the top command.
- **D. Configure the Amazon CloudWatch agent procstat plugin to capture CPU process metrics.**

**Answer: D**

Explanation:

The CloudWatch agent procstat plugin is specifically designed to collect per-process metrics such as CPU usage by process ID. It allows continuous, automated monitoring without manual intervention and integrates directly with CloudWatch.

Default CloudWatch metrics provide only instance-level CPU utilization and do not expose process-level details. Manual logins and Lambda-based polling introduce unnecessary operational overhead and are not scalable.

Therefore, configuring the procstat plugin is the most efficient solution.

#### NEW QUESTION # 207

A company stores critical information in an Amazon RDS for PostgreSQL database. The company notices degraded performance, high CPU utilization, increased query latency, and connection timeouts during peak shopping hours. The company also identifies surges in user connections during peak hours. The connection surges affect the read performance of the database.

The company wants to resolve the database performance issues.

Which combination of steps will meet this requirement? (Select TWO.)

- A. Implement RDS Proxy with connection pooling.
- B. Use Amazon CloudWatch Logs Insights to analyze the database queries and identify performance bottlenecks. Update the queries based on the analysis findings.
- C. Use Amazon RDS Performance Insights to analyze the SQL queries that most affect database performance. Update the SQL queries based on the analysis findings.
- D. Use Amazon RDS for PostgreSQL with a single Availability Zone.
- E. Disable connection pooling entirely to ensure that all user connections are treated equally, even during peak hours.

**Answer: A,C**

Explanation:

The symptoms point to two common database pressure sources: inefficient queries (driving high CPU and latency) and excessive concurrent connections (driving connection management overhead, read contention, and timeouts). The most effective remediation is to address both the SQL workload and the connection surge behavior.

Amazon RDS Performance Insights (Option A) is designed to help identify which SQL statements and wait events contribute most to database load. It provides a database-centric view of performance that highlights top SQL, top waits, and the relative impact of sessions on CPU and other resources. By using Performance Insights to pinpoint the highest-impact SQL and then tuning those queries (for example, improving indexes, reducing full scans, and optimizing query patterns), the company can lower CPU utilization and reduce query latency during peak hours.

Connection surges are best addressed with a managed connection pooling layer. RDS Proxy (Option E) provides connection pooling and multiplexing between application connections and the database, which reduces the overhead of establishing and maintaining a large number of database connections. During spikes, the proxy can smooth bursty connection behavior, improve failover handling, and reduce the risk of overwhelming the database with too many concurrent connections. This directly targets the observed timeouts and read performance degradation tied to surges.

Option B is not the best fit because CloudWatch Logs Insights is a log analytics tool; it is not the primary mechanism for deep SQL performance attribution in RDS and typically requires extensive logging configurations that add overhead. Option C would reduce availability and does not improve performance.

Option D would make the problem worse: disabling pooling increases connection churn and overhead, amplifying timeouts and latency during peak traffic.

Therefore, combining Performance Insights query analysis/tuning with RDS Proxy connection pooling best resolves both root causes.

#### NEW QUESTION # 208

A CloudOps engineer needs to create a report that shows how many bytes are sent to and received from each target group member for an Application Load Balancer (ALB).

Which combination of steps should the CloudOps engineer take to meet these requirements? (Select TWO.)

- A. Enable access logging for the ALB. Save the logs to an Amazon S3 bucket.
- B. Use Amazon Athena to query the ALB logs. Query the table. Use the received\_bytes and sent\_bytes fields to calculate the total bytes grouped by the target and port fields.
- C. Use Amazon Athena to query the ALB logs. Query the table. Use the received\_bytes and sent\_bytes fields to calculate the total bytes grouped by the client port field.
- D. Create an Amazon CloudWatch dashboard that shows the Sum statistic of the ProcessedBytes metric for the ALB.
- E. Install the Amazon CloudWatch agent on the instances in the target group.

**Answer: A,B**

Explanation:

ALB access logs contain request-level records that include byte counts and target information. To report bytes sent to and received from each target group member, the CloudOps engineer should enable ALB access logging and store the logs in Amazon S3. Then Amazon Athena can query the log files and aggregate received\_bytes and sent\_bytes by the target address and port fields. AWS Athena documentation provides table definitions for ALB access logs and supports querying those logs directly from S3. Installing the CloudWatch agent on targets is unnecessary because the required data is in ALB logs, not instance OS metrics. The ProcessedBytes CloudWatch metric is useful for aggregate load balancer traffic but does not provide per-target member reporting. Grouping by client port is also wrong because the requirement is per target member.

#### **NEW QUESTION # 209**

A CloudOps engineer creates a new VPC that includes a public subnet and a private subnet. The CloudOps engineer successfully launches 11 Amazon EC2 instances in the private subnet. The CloudOps engineer attempts to launch one more EC2 instance in the same subnet. However, the CloudOps engineer receives an error message that states that not enough free IP addresses are available.

What must the CloudOps engineer do to deploy more EC2 instances?

- **A. Create a new private subnet to hold the required EC2 instances.**
- B. Edit the private subnet to extend across a second Availability Zone.
- C. Edit the private subnet to change the CIDR block to /27.
- D. Assign additional Elastic IP addresses to the private subnet.

**Answer: A**

Explanation:

A subnet's CIDR block size determines how many IP addresses it can allocate to resources.

Once all IP addresses in the subnet are used, you cannot expand or resize the CIDR block of an existing subnet. The only solution is to create a new subnet (with a larger or different CIDR range) within the same VPC and launch additional EC2 instances there. This allows scaling without IP address exhaustion.

#### **NEW QUESTION # 210**

A company runs a web application on Amazon EC2 instances behind an Application Load Balancer (ALB).

The company needs an AWS Lambda function to perform a custom recovery procedure on the application server when the application returns an HTTP 500 status code.

A CloudOps engineer needs to design a solution that detects HTTP 500 status codes and runs the Lambda function reliably when errors are detected.

Which solution will meet these requirements?

- **A. Configure an Amazon CloudWatch alarm on the HTTPCode\_Target\_5XX\_Count ALB target group metric. Set the alarm action to run the Lambda function.**
- B. Create an Amazon EventBridge rule for all ALB request events that invokes the Lambda function. Configure the Lambda function to filter for HTTP 500 status codes internally.
- C. Deploy a new Lambda function that continuously scans the ALB access logs in Amazon S3 to detect HTTP 500 status codes and then invokes the existing Lambda function.
- D. Enable AWS CloudTrail on the application instances. Configure Amazon CloudWatch Logs metric filters to detect HTTP 500 status codes and run the Lambda function.

**Answer: A**

Explanation:

The ALB target group metric HTTPCode\_Target\_5XX\_Count records HTTP 5XX responses generated by targets behind the load balancer. A CloudWatch alarm can monitor this metric and enter the ALARM state when the error count crosses the defined threshold. CloudWatch alarms can directly invoke a Lambda function as an alarm action, which makes this the simplest reliable automation path for custom recovery.

AWS documentation states that invoking a Lambda function is an alarm action and is used to automate custom actions on alarm state changes. Option B uses log polling, which adds latency and operational overhead. CloudTrail does not capture application HTTP 500 responses from EC2 instances. EventBridge does not receive every ALB request as an event. Therefore, CloudWatch

alarm plus Lambda action is correct.

## NEW QUESTION # 211

.....

If you are busy with your study or work and have little time to prepare for your exam, choose us, we will do the rest for you. SOA-C03 exam bootcamp are edited and verified by professional experts, therefore the quality and accuracy can be guaranteed. You just need to spend about 48 to 72 hours on practicing, and you can pass the exam in your first attempt by using SOA-C03 Exam Braindumps of us. We offer you free demo to have a try before buying. Online and offline chat service are available, and if you have any questions about SOA-C03 exam bootcamp, you can have a conversation with us.

**SOA-C03 Valid Exam Cost:** [https://www.trainingdumps.com/SOA-C03\\_exam-valid-dumps.html](https://www.trainingdumps.com/SOA-C03_exam-valid-dumps.html)

So the Amazon Associate SOA-C03 exam dumps can help you pass the test easily, You just need to download any one web browser; you can use our SOA-C03 test torrent, Thus, getting the Amazon SOA-C03 certification seems to be a complex thing, As long as you use our products, TrainingDumps SOA-C03 Valid Exam Cost will let you see a miracle, Amazon Reliable SOA-C03 Test Simulator Don't miss these incredible offers.

And is it a viable case for everyday use, What are the two SOA-C03 main inputs outputs from processes in the initiating process group) that you need to start planning a project?

So the Amazon Associate SOA-C03 Exam Dumps can help you pass the test easily, You just need to download any one web browser; you can use our SOA-C03 test torrent.

## We provide 100% premium Amazon SOA-C03 exam questions

Thus, getting the Amazon SOA-C03 certification seems to be a complex thing, As long as you use our products, TrainingDumps will let you see a miracle, Don't miss these incredible offers.
