We will transfer our Salesforce Certified Platform App Builder prep torrent to you online immediately, and this service is also the reason why our Platform-App-Builder Test Braindumps can win people's heart and mind. Therefore, you are able to get hang of the essential points in a shorter time compared to those who are not willing to use our Platform-App-Builder exam torrent.

### Salesforce Certified Platform App Builder Sample Questions (Q250-Q255):

#### NEW QUESTION # 250

A user's profile does not have any permissions to view a custom object. However, the Organization Wide Defaults for the custom object are set to Public Read/Write. Users with this profile will still be able to access the custom object.

- A. False
- B. True

**Answer: A**

Explanation:

Profile level access will override the OWD.

#### NEW QUESTION # 251

Which objects can be members of a campaign? Choose 2 answers

- A. Opportunity
- B. Contact
- C. Lead
- D. Account

**Answer: B,C**

#### NEW QUESTION # 252

Universal Containers wants sales reps to get permission from their managers before deleting Opportunities. What can be used to meet these requirements?

- A. Schedule-triggered flow with Submit for Approval action
- B. Two-step approval process
- C. Approval process and flow with a scheduled path
- D. Approval process with a record triggered flow

**Answer: D**

Explanation:

This is where declarative precision matters. Use D. Approval process with a record triggered flow. The decision turns on Lightning page configuration. Lightning App Builder controls page composition, component visibility, activation, assignments, and specialized

surfaces such as record pages, home pages, and utility bars.

This is how the same requirement would be handled in a well-governed Salesforce org: identify the controlling object, relationship, field, page, automation, or environment first, and then configure the native capability for that control point. The selected answer satisfies the requirement without requiring users to perform extra interpretation or administrators to maintain an unnecessary custom workaround.

The other choices would leave a gap in the implementation. A (Two-step approval process) misses the mark because An approval process is for formal sign-off, not for every automation, display, import, or security requirement. B (Approval process and flow with a scheduled path) is not enough: Flow is broad, but it is not correct unless the requirement is specifically about guided or automated logic. C (Schedule-triggered flow with Submit for Approval action) handles a different concern; Flow is broad, but it is not correct unless the requirement is specifically about guided or automated logic. In a real org, the builder should include negative testing as well, proving that the rule does not fire or display outside the intended conditions.

---

### NEW QUESTION # 253

Sales reps at Cloud Kicks (CK) forget to submit for approval when CK needs orders reviewed before close won. CK wants to automatically submit opportunities into the Secure Commitment Stage to eliminate manual submission.

Which three features would meet the business requirements?

Choose 3 answers

- A. Apex
- B. Workflow
- C. Chatter action
- D. Process Builder
- E. Flow

**Answer: A,D,E**

Explanation:

Explanation

The app builder should use three features to meet the business requirements:

Process Builder: This is a type of automation tool that can execute actions based on certain criteria. In this case, the process builder can have a criteria that evaluates if an opportunity is in the Secure Commitment Stage, and then execute an action that submits it for approval.

Apex: This is a programming language that allows developers to execute complex logic on the Salesforce platform. Apex can be used to create triggers that run before or after certain events, such as insert, update, delete, or undelete of records. In this case, Apex can be used to create a trigger that runs before an opportunity is updated and submits it for approval if it is in the Secure Commitment Stage.

Flow: This is another type of automation tool that can guide users through a series of screens and perform actions based on user input. Flow can also be triggered by certain events, such as when a record is created or updated. In this case, Flow can be used to create a record-triggered flow that runs after an opportunity is updated and submits it for approval if it is in the Secure Commitment Stage. Option A and D are not features that can meet the business requirements.

### NEW QUESTION # 254

Universal Containers uses a private Account sharing model. They have a Process Improvement team with representatives from multiple departments that need s to view all accounts that have been flagged as problem accounts. How should this team be granted access to the records?

- A. Write a trigger to use Apex Managed Sharing to grant access with the Process Improvement team
- B. Use a criteria-based sharing rule where the account are shared with the Process Improvement public group
- C. User a record Owner sharing rule that is shared with the Process Improvement public group
- D. Option 5
- E. Use a record owner sharing rule that is shared with the Process Improvement role

**Answer: B**

### NEW QUESTION # 255
