

Pass Guaranteed Quiz Efficient Mule-Arch-201 - Trustworthy Salesforce Certified MuleSoft Platform Architect Exam Torrent

BONUS!!! Download part of Braindumpsqa Mule-Arch-201 dumps for free: https://drive.google.com/open?id=14AbiDIRHzE8mPpRwWr4oFJME-_JPDmG

One year of free Salesforce Mule-Arch-201 test questions updates are included in the SnowPro Core Certification test Mule-Arch-201 quiz package. This means that if any changes are made to the Salesforce Certified MuleSoft Platform Architect (Mule-Arch-201) exam, you will be able to obtain the updated Salesforce Mule-Arch-201 Test Questions preparation immediately. This is a great method to keep up to date on the latest Salesforce Certified MuleSoft Platform Architect (Mule-Arch-201) questions information and ensure you pass the Salesforce Certified MuleSoft Platform Architect (Mule-Arch-201) with ease.

Braindumpsqa has assembled a brief yet concise study material that will aid you in acing the Salesforce Certified MuleSoft Platform Architect (Mule-Arch-201) exam on the first attempt. This prep material has been compiled under the expert guidance of 90,000 experienced Salesforce professionals from around the globe. Braindumpsqa offers the complete package that includes all exam questions conforming to the syllabus for passing the Salesforce Certified MuleSoft Platform Architect (Mule-Arch-201) exam certificate in the first try.

Mule-Arch-201 Reliable Test Practice, Latest Mule-Arch-201 Test Format

We offer free demo Mule-Arch-201 questions answers and trial services at Braindumpsqa. You can always check out our Mule-Arch-201 certification exam dumps questions that will help you pass the Mule-Arch-201 exams. With our well-researched and well-curated exam Mule-Arch-201 dumps, you can surely pass the exam in the best marks. We continuously update our products by adding latest questions in our Mule-Arch-201 PdfFiles. After the date of purchase, you will receive free updates for one year. You will also be able to get discounts for Mule-Arch-201 on complete packages.

Salesforce Certified MuleSoft Platform Architect Sample Questions (Q55-Q60):

NEW QUESTION # 55

When using CloudHub with the Shared Load Balancer, what is managed EXCLUSIVELY by the API implementation (the Mule application) and NOT by Anypoint Platform?

- A. The number of DNS entries allocated to the API implementation
- **B. The SSL certificates used by the API implementation to expose HTTPS endpoints**
- C. The logging configuration that enables log entries to be visible in Runtime Manager
- D. The assignment of each HTTP request to a particular CloudHub worker

Answer: B

Explanation:

Correct Answer: The SSL certificates used by the API implementation to expose HTTPS endpoints

>> The assignment of each HTTP request to a particular CloudHub worker is taken care by Anypoint Platform itself. We need not manage it explicitly in the API implementation and in fact we CANNOT manage it in the API implementation.

>> The logging configuration that enables log entries to be visible in Runtime Manager is ALWAYS managed in the API implementation and NOT just for SLB. So this is not something we do EXCLUSIVELY when using SLB.

>> We DO NOT manage the number of DNS entries allocated to the API implementation inside the code. Anypoint Platform takes care of this.

It is the SSL certificates used by the API implementation to expose HTTPS endpoints that is to be managed EXCLUSIVELY by the API implementation. Anypoint Platform does NOT do this when using SLBs.

NEW QUESTION # 56

A retail company with thousands of stores has an API to receive data about purchases and insert it into a single database. Each individual store sends a batch of purchase data to the API about every 30 minutes. The API implementation uses a database bulk insert command to submit all the purchase data to a database using a custom JDBC driver provided by a data analytics solution provider. The API implementation is deployed to a single CloudHub worker. The JDBC driver processes the data into a set of several temporary disk files on the CloudHub worker, and then the data is sent to an analytics engine using a proprietary protocol. This process usually takes less than a few minutes. Sometimes a request fails. In this case, the logs show a message from the JDBC driver indicating an out-of-file-space message. When the request is resubmitted, it is successful. What is the best way to try to resolve this throughput issue?

- A. Use a CloudHub autoscaling policy to add CloudHub workers
- **B. Increase the number of CloudHub workers**
- C. Use a CloudHub autoscaling policy to increase the size of the CloudHub worker
- D. Increase the size of the CloudHub worker(s)

Answer: B

Explanation:

Correct Answer: Increase the size of the CloudHub worker(s)

The key details that we can take out from the given scenario are:

>> API implementation uses a database bulk insert command to submit all the purchase data to a database

>> JDBC driver processes the data into a set of several temporary disk files on the CloudHub worker
>> Sometimes a request fails and the logs show a message indicating an out-of-file-space message Based on above details:
>> Both auto-scaling options does NOT help because we cannot set auto-scaling rules based on error messages. Auto-scaling rules are kicked-off based on CPU/Memory usages and not due to some given error or disk space issues.
>> Increasing the number of CloudHub workers also does NOT help here because the reason for the failure is not due to performance aspects w.r.t CPU or Memory. It is due to disk-space.
>> Moreover, the API is doing bulk insert to submit the received batch data. Which means, all data is handled by ONE worker only at a time. So, the disk space issue should be tackled on "per worker" basis. Having multiple workers does not help as the batch may still fail on any worker when disk is out of space on that particular worker.
Therefore, the right way to deal this issue and resolve this is to increase the vCore size of the worker so that a new worker with more disk space will be provisioned.

NEW QUESTION # 57

What Anypoint Connectors support transactions?

- A. Database, JMS, VM
- B. Database, JMS, VM, SFTP
- C. Database, VM, File
- D. Database, 3MS, HTTP

Answer: A

NEW QUESTION # 58

An online store's marketing team has noticed an increase in customers leaving online baskets without checking out. They suspect a technology issue is at the root cause of the baskets being left behind. They approach the Center for Enablement to ask for help identifying the issue. Multiple APIs from across all the layers of their application network are involved in the shopping application. Which feature of the Anypoint Platform can be used to view metrics from all involved APIs at the same time?

- A. Functional monitoring
- B. API Manager
- C. Built-in dashboards
- D. Custom dashboards

Answer: C

Explanation:

Understanding the Need for Cross-API Monitoring:

The Center for Enablement (C4E) needs to investigate potential technical issues across multiple APIs in the application network that may be causing customers to abandon their carts.

This requires a solution that allows viewing metrics across several APIs in real-time to identify any performance issues or bottlenecks.

Evaluating Anypoint Platform Features:

Built-in Dashboards: Anypoint Platform provides built-in dashboards in Anypoint Monitoring, allowing teams to view metrics from multiple APIs in a single interface. This feature is designed to monitor API performance, latency, errors, and throughput, and is ideal for tracking performance across all layers of the application network.

Custom Dashboards: While custom dashboards allow for more tailored views, the built-in dashboards already aggregate metrics for multiple APIs, making it unnecessary to build a custom solution for this scenario.

Functional Monitoring: This feature is used to set up tests to monitor specific API functionality and uptime but is not suited for tracking metrics across multiple APIs in real-time.

API Manager: API Manager primarily focuses on managing API policies, contracts, and access control rather than providing detailed, real-time metrics across the entire application network.

Conclusion:

Option B (Built-in dashboards) is the best choice because it provides a comprehensive view of metrics from all APIs involved, enabling the C4E team to quickly identify any issues that may be contributing to abandoned shopping carts.

Refer to MuleSoft's documentation on Anypoint Monitoring and built-in dashboards for more details on configuring and using these dashboards effectively.

NEW QUESTION # 59

An organization wants to make sure only known partners can invoke the organization's APIs. To achieve this security goal, the organization wants to enforce a Client ID Enforcement policy in API Manager so that only registered partner applications can invoke the organization's APIs. In what type of API implementation does MuleSoft recommend adding an API proxy to enforce the Client ID Enforcement policy, rather than embedding the policy directly in the application's JVM?

- A. A Mule 4 application with an API specification
- B. A Mule 3 application using APIkit
- **C. A Non-Mule application**
- D. A Mule 3 or Mule 4 application modified with custom Java code

Answer: C

Explanation:

Correct Answer: A Non-Mule application

>> All type of Mule applications (Mule 3/ Mule 4/ with APIkit/ with Custom Java Code etc) running on Mule Runtimes support the Embedded Policy Enforcement on them.

>> The only option that cannot have or does not support embedded policy enforcement and must have API Proxy is for Non-Mule Applications.

So, Non-Mule application is the right answer.

NEW QUESTION # 60

.....

So rest assured that with the Braindumpsqa Salesforce Certified MuleSoft Platform Architect (Mule-Arch-201) practice questions you will not only make the entire Salesforce Mule-Arch-201 exam dumps preparation process and enable you to perform well in the final Salesforce Certified MuleSoft Platform Architect (Mule-Arch-201) certification exam with good scores. To provide you with the updated Salesforce Certified MuleSoft Platform Architect (Mule-Arch-201) exam questions the Braindumpsqa offers three months updated Salesforce Certified MuleSoft Platform Architect (Mule-Arch-201) exam dumps download facility. Now you can download our updated Mule-Arch-201 practice questions up to three months from the date of Braindumpsqa Salesforce Certified MuleSoft Platform Architect (Mule-Arch-201) exam purchase.

Mule-Arch-201 Reliable Test Practice: https://www.braindumpsqa.com/Mule-Arch-201_braindumps.html

Our Mule-Arch-201 practice question latest, accurate, valid, Salesforce Trustworthy Mule-Arch-201 Exam Torrent You can use these PDF files even when you are busy in your professional life, Our company, which dedicated to make the task of passing Salesforce MuleSoft Mule-Arch-201 exam easier for all candidates, has made a great progress after 10 years' development, Many returned customer said that only few new questions appeared in the Salesforce Mule-Arch-201 Reliable Test Practice real exam.

Upgrading to Windows Vista from a Previous Version of Windows, Sounds easy, don't it, Our Mule-Arch-201 practice question latest, accurate, valid, You can use these PDF files even when you are busy in your professional life.

Simplify Exam Preparation With Our Simple Salesforce Mule-Arch-201 Exam Q&A

Our company, which dedicated to make the task of passing Salesforce MuleSoft Mule-Arch-201 exam easier for all candidates, has made a great progress after 10 years' development.

Many returned customer said that only few new questions appeared in the Salesforce real exam, Why Use Braindumpsqa Mule-Arch-201 Exam Dumps To Pass Certification Exam
