AZ-400 Valid Braindumps Files Offer You The Best Reliable Test Forum to pass Microsoft Designing and Implementing Microsoft DevOps Solutions exam

PassExamDumps made an absolute gem of study material which carries actual Microsoft AZ-400 Exam Questions for the students so that they don't get confused in order to prepare for Microsoft AZ-400 exam and pass it with a good score. The Microsoft AZ-400 practice test questions are made by examination after consulting with a lot of professionals and receiving positive feedback from them. The Designing and Implementing Microsoft DevOps Solutions (AZ-400) practice test questions prep material has actual Microsoft AZ-400 exam questions for our customers so they don't face any hurdles while preparing for Microsoft AZ-400 certification exam.

Microsoft Designing and Implementing Microsoft DevOps Solutions Sample Questions (Q101-Q106):

NEW QUESTION # 101

You need to implement Project6.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

□

Answer:

Explanation:

□ Explanation

□ Scenario: Implement Project3, Project5, Project6, and Project7 based on the planned changes

□ Step 1: Open the release pipeline editor.

In the Releases tab of Azure Pipelines, select your release pipeline and choose Edit to open the pipeline editor.

Step 2: Enable Gates.

Choose the pre-deployment conditions icon for the Production stage to open the conditions panel. Enable gates by using the switch control in the Gates section.

Step 3: Add Query Work items.

Choose + Add and select the Query Work Items gate.

Configure the gate by selecting an existing work item query.

□ Note: A case for release gate is:

Incident and issues management. Ensure the required status for work items, incidents, and issues. For example, ensure deployment occurs only if no priority zero bugs exist, and validation that there are no active incidents takes place after deployment.

NEW QUESTION # 102

Task 10

For Project1, you need to ensure that artifacts, symbols, and attachments are retained for 60 days.

Answer:

Explanation:

See the solution below in explanation.

Explanation:

Step 1: Navigate to Project Settings

* Navigate to Azure DevOps:

* Go to Azure DevOps and sign in with your credentials.

* Select Your Project:

* Choose Project1 from your list of projects.

* Access Project Settings:

* In the left-hand menu, scroll down and select Project settings.

Step 2: Configure Retention Policies

* Navigate to Pipelines Settings:

* Under Pipelines, select Settings.

* Set Retention Policies:

* In the Retention section, set the number of days to keep artifacts, symbols, and attachments to 60 days.

* Ensure that the retention policy is applied to all relevant pipelines and branches.

* Save Changes:

* Click on Save to apply the retention policy1.

By following these steps, you will have successfully configured the retention policy to retain artifacts, symbols, and attachments for 60 days in Project1

NEW QUESTION # 103

You are configuring the settings of a new Git repository in Azure Repos.

You need to ensure that pull requests in a branch meet the following criteria before they are merged:

* Committed code must compile successfully.

* Pull requests must have a Quality Gate status of Passed in SonarCloud.

Which policy type should you configure for each requirement? To answer, drag the appropriate policy types to the correct

requirements. Each policy type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Box 1: A check-in policy

Administrators of Team Foundation version control can add check-in policy requirements. These check-in policies require the user to take actions when they conduct a check-in to source control.

By default, the following check-in policy types are available:

* Builds Requires that the last build was successful before a check-in.

* Code Analysis Requires that code analysis is run before check-in.

* Work Items Requires that one or more work items be associated with the check-in.

Box 2: Build policy

NEW QUESTION # 104

Your company is creating a suite of three mobile applications.

You need to control access to the application builds. The solution must be managed at the organization level. What should you use?

To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 105

Your company uses Team Foundation Server 2013 (TFS 2013).

You plan to migrate to Azure DevOps.

You need to recommend a migration strategy that meets the following requirements:

* Preserves the dates of Team Foundation Version Control changesets

* Preserves the changes dates of work items revisions

* Minimizes migration effort

* Migrates all TFS artifacts

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Box 1: Upgrade TFS to the most recent RTM release.

One of the major prerequisites for migrating your Team Foundation Server database is to get your database schema version as close as possible to what is currently deployed in Azure Devops Services.

Box 2: Use the TFS Database Import Service

In Phase 3 of your migration project, you will work on upgrading your Team Foundation Server to one of the supported versions for the Database Import Service in Azure Devops Services.
