# Sample UiPath UiPath-AAAv1 Questions, UiPath-AAAv1 Latest Learning Material

By propagating all necessary points of knowledge available for you, our UiPath-AAAv1 practice materials helped over 98 percent of former exam candidates gained successful outcomes as a result. Our UiPath-AAAv1 practice materials have accuracy rate in proximity to 98 and over percent for your reference. Up to now we classify them as three versions. They are pdf, software and the most convenient one app. Each of them has their respective feature and advantage including new information that you need to know to pass the test.

The product ActualVCE provide with you is compiled by professionals elaborately and boosts varied versions which aimed to help you pass the UiPath-AAAv1 exam by the method which is convenient for you. It is not only cheaper than other dumps but also more effective. The high pass rate of our UiPath-AAAv1 Study Materials has been approved by thousands of candidates, they recognized our website as only study tool to pass UiPath-AAAv1 exam.

Free PDF Quiz 2026 UiPath-AAAv1: UiPath Certified Professional Agentic Automation Associate (UiAAA) – High-quality Sample Questions

If you still have no confidence for passing test, here we will recommend you an excellent reference material. Our valid UiPath-AAAv1 exam collection pdf will help you pass exam and go to success, you will approach to IT field top. You can just spend short time in preparing for real test with our latest UiPath-AAAv1 Exam Collection Pdf. You can download free demo in our website for your reference to verify the reliability of our dumps before purchasing.

UiPath Certified Professional Agentic Automation Associate (UiAAA) Sample Questions (Q10-Q15):

NEW QUESTION # 10
While configuring an Integration Service activity as a tool for your agent in Studio Web, how should you set up the activity so the agent can decide the value of a required field (e.g. Channel Id) at runtime based solely on instructions in the prompt?

- A. Change every field, including Channel Id, to Argument because an agent cannot infer any field values without explicit arguments.
- B. Leave the field's input method on Prompt (the default) and keep or refine the tool description; this lets the agent infer the value during execution.
- C. Change every field, including Channel Id, to Variable because an agent cannot infer any field values without explicit arguments.
- D. Declare the field as an output argument in Data Manager so the agent can feed a value back into the tool.

Answer: B

Explanation:
Bis correct - when a field (likeChannel Id) is set toPrompt, the agent will attempt to infer its valueat runtime, based on theinstructions in the promptand the context provided.
This is the default and preferred mode for agent tools when:

* The agent has enough context or memory to decide
* You wantLLM autonomyin filling the field dynamically
* You're using prompt instructions like: "Post to the user's default Slack channel" Option A is incorrect - "Argument" is used when you're passing aspecific variableinto the agent prompt (not inferred).
C misunderstands data flow direction - "Output" is not relevant for input fields.
D is invalid - "Variable" is not the standard method for field inference in this scenario.
This aligns with UiPath'sagent + tools orchestrationmodel usingStudio Web's low-code agent builder.

NEW QUESTION # 11
Which of the following best describes a challenge faced by traditional automation in complex business processes?

- A. Over-reliance on AI-powered agents for all types of automation tasks
- B. Excessive flexibility in handling varied workflows across different systems like CRM and ERP
- C. Limited ability to automate unstructured tasks that require judgment and contextual awareness
- D. Inability to perform repetitive, structured tasks efficiently and reliably

Answer: C

Explanation:
The correct answer isC, which highlights one of the core limitations of traditional rule-based automation (RPA) - itsinability to handle unstructured tasks that require human-like reasoning and contextual awareness.
According to UiPath's Agentic Automation documentation, traditional automation excels atrepetitive, rules- based, structuredtasks.
However, it struggles when:
* Input data isunstructured(like emails, PDFs, or chat logs)
* Tasks requirecontextual understanding, decision-making, or judgment
* Processes span across systems with unpredictable flows (e.g., CRM + ERP + email) This is exactly whereAgentic Automationsteps in. It augments classic automation by embeddingLLMs, AI agents, and decision intelligenceto manage tasks involving ambiguity, variability, and natural language - things traditional bots cannot handle well.
Options A, B, and D are incorrect or misleading:
* A is false because traditional automation isnotflexible across varied workflows.
* B is theoppositeof traditional automation - it's agentic.
* D is inaccurate because RPA handles repetitive, structured tasks very well - that's its strength.
By addressing C, UiPath bridges the gap between deterministic automation and intelligent, adaptive systems that can trulyscale across complex, real-world business scenarios.

NEW QUESTION # 12
Why would you choose the Argument input method for an activity field?

- A. Lets the agent infer the field value at runtime using the Description and its reasoning.
- B. Applies one constant value you enter during design every time the agent executes the activity.
- C. Prompts a person to supply the value each time the field is evaluated at runtime.
- D. Receives a runtime value from an agent input argument defined earlier in the workflow.

Answer: D

Explanation:
Bis correct - theArgumentinput method is used when you want a field in an activity (such as a tool, API call, or process input) to dynamically receive a valueat runtime, passed viaagent input argumentsdefined earlier in the flow.
This setup is critical for:
* Contextual automation: e.g., if the user or upstream system provides a value like Customer_ID, that same value can be used in downstream tools.
* Reusability: One workflow can behave differently based on argument values passed at runtime (e.g., from Orchestrator triggers, API calls, or user prompts).
* Maintainability: Centralizing inputs allows for consistent data mapping and easier debugging.
Here's how it works:
* You define aninput argumentin the agent's Data Manager (e.g., {{CUSTOMER_EMAIL}})
* In the activity, you set the input method toArgument, and reference the same name
* At runtime, UiPath automatically maps the values based on the execution context Option A is describing theStaticinput method.
C refers to thePromptmethod, where the LLM infers values.

D is incorrect - that's thePrompt for user input, not theArgumentflow.
In summary, choosingArgumentenables your agent to behavedynamically and intelligently, using external or user-provided data without hardcoding.

NEW QUESTION # 13

Which similarity search function is leveraged when Context Grounding is used by UiPath Products like Agents?

- A. Sigmoid similarity search
- B. Cosine similarity search
- C. ReLu similarity search
- D. Softmax similarity search

Answer: B

Explanation:
Cis correct - UiPath'sContext Groundingsystem usescosine similarity searchto retrieve the most relevant documents, passages, or semantic chunks from indexed data during runtime.
This retrieval process is critical for:
* Minimizing hallucination
* Enhancingprompt grounding
* Connecting agents toreal-time enterprise knowledge
Here's how it works:
* All documents areembedded into vector spaceusing a model (e.g., OpenAI or Azure OpenAI embeddings)
* At runtime, the agent's query isconverted into a vector
* Acosine similaritycomparison is used to fetch themost semantically similar documentsbased onangle (not magnitude)between vectors This enables agents to provideaccurate, contextual answers, like referencing HR policies or IT guides.
Other options:
* A (Softmax) is a classifier, not a search method
* B (Sigmoid) is for binary classification
* D (ReLU) is an activation function in neural nets - not for search

NEW QUESTION # 14

How does agentic orchestration ensure consistency and reliability in processes?

- A. By significantly reducing the level of human intervention required, confining their involvement to only a minimal fraction of the overall operational processes and decision-making activities.
- B. By allowing agents complete autonomy to make independent decisions based on real-time scenarios.
- C. By forcing robots and people to work separately, maintaining a strict division of roles without overlap.
- D. By using standard business process modeling notation (BPMN) to define business rules and guardrails for AI agents.

Answer: D

Explanation:
The correct answer isA- UiPath'sagentic orchestration layerusesBPMN (Business Process Model and Notation)to visually model and govern the workflows in which AI agents operate. This is a core feature of UiPath Maestro, where BPMN ensures:
* Clear definition of rules, handoffs, and agent actions
* Guardrails for decision-making
* Coordination between people, robots, and AI agents
* Reusability and governanceof business logic
Agentic orchestration doesnot mean giving full autonomy to agents(as in D), nor does it aim to eliminate human input entirely (as in B). Instead, it promotesadaptive workflowswhere human review, agent action, and automation co-exist in a governed way.
Option C is incorrect because UiPath specificallyencourages hybrid collaborationbetween humans, bots, and agents. BPMN is the bridge that brings that orchestration to life.
