Thanks to our SPLK-1002 Training Materials, you can learn for your SPLK-1002 certification anytime, everywhere. And you will be bound to pass the exam with our SPLK-1002 exam questions.

## Splunk Core Certified Power User Exam Sample Questions (Q172-Q177):

### NEW QUESTION # 172

In this search, \_\_\_\_\_ will appear on the y-axis. SEARCH: sourcetype=access\_combined status!=200 | chart count over host

- A. status

- B. count
- C. host

**Answer: B**

Explanation:

In this search, count will appear on the y-axis<sup>2</sup>. This search uses the chart command to create a chart of the count of events over host for events that have status not equal to 2002. The chart command creates a table with one column for each value of the field after the over clause and one row for each value of the field after the by clause (if any)<sup>2</sup>. The values in the table are calculated by applying the function before the over clause to the events in each group<sup>2</sup>. In this case, the chart command creates a table with one column for each host and one row for the count of events for each host. The y-axis of the chart shows the values of the count function applied to each host. Therefore, option C is correct, while options A and B are incorrect because they appear on the x-axis or as labels of the chart.

### NEW QUESTION # 173

Which of the following are required to create a POST workflow action?

- A. Label, URI, search string.
- B. XMI attributes, URI, name.
- C. Label, URI, post arguments.
- D. URI, search string, time range picker.

**Answer: C**

Explanation:

POST workflow actions are custom actions that send a POST request to a web server when you click on a field value in your search results. POST workflow actions can be configured with various options, such as label name, base URL, URI parameters, post arguments, app context, etc. One of the options that are required to create a POST workflow action is post arguments. Post arguments are key-value pairs that are sent in the body of the POST request to provide additional information to the web server. Post arguments can include field values from your data by using dollar signs around the field names.

### NEW QUESTION # 174

Which of the following search modes automatically returns all extracted fields in the fields sidebar?

- A. Fast
- B. Verbose
- C. Smart

**Answer: B**

Explanation:

The search modes determine how Splunk processes your search and displays your results<sup>2</sup>. There are three search modes: Fast, Smart and Verbose<sup>2</sup>. The search mode that automatically returns all extracted fields in the fields sidebar is Verbose<sup>2</sup>. The Verbose mode shows all the fields that are extracted from your events, including default fields, indexed fields and search-time extracted fields<sup>2</sup>. The fields sidebar is a panel that shows the fields that are present in your search results<sup>2</sup>. Therefore, option C is correct, while options A and B are incorrect because they are not search modes that automatically return all extracted fields in the fields sidebar.

### NEW QUESTION # 175

Alerts trigger when search results meet specific conditions.

- A. False
- B. True

**Answer: B**

### NEW QUESTION # 176

Which workflow action method can be used when the action type is set to link?

- A. PUT
- B. Search
- C. UPDATE
- **D. GET**

**Answer: D**

Explanation:

Explanation/Reference: <https://docs.splunk.com/Documentation/Splunk/8.0.3/Knowledge/SetupaGETworkflowaction>

### NEW QUESTION # 177

.....

Elaborately designed and developed SPLK-1002 test guide as well as good learning support services are the key to assisting our customers to realize their dreams.
