command and control	<input type="text"/>	stage where the attacker will explore methods of persistence
act on the objectives	<input type="text"/>	stage where the attacker has access to a system

Answer:

Explanation:

NEW QUESTION # 254

An administrator needs to allow users to use their own office applications. How should the administrator configure the firewall to allow multiple applications in a dynamic environment?

- A. Create an Application Group and add Office 365, Evernote, Google Docs, and Libre Office
- **B. Create an Application Filter and name it Office Programs, the filter it on the business-systems category, office-programs subcategory**
- C. Create an Application Filter and name it Office Programs, then filter it on the business-systems category
- D. Create an Application Group and add business-systems to it

Answer: B

Explanation:

Explanation

An application filter is an object that dynamically groups applications based on application attributes that you define, including category, subcategory, technology, risk factor, and characteristic. This is useful when you want to safely enable access to applications that you do not explicitly sanction, but that you want users to be able to access. For example, you may want to enable employees to choose their own office programs (such as Evernote, Google Docs, or Microsoft Office 365) for business use. To safely enable these types of applications, you could create an application filter that matches on the Category business-systems and the Subcategory office-programs. As new applications office programs emerge and new App-IDs get created, these new applications will automatically match the filter you defined; you will not have to make any additional changes to your policy rulebase to safely enable any application that matches the attributes you defined for the filter.

NEW QUESTION # 255

An administrator has an IP address range in the external dynamic list and wants to create an exception for one specific IP address in this address range.

Which steps should the administrator take?

- A. Select the address range in the List Entries list. A column will open with the IP addresses. Select the entry to exclude.
- B. Add each IP address in the range as a list entry and then exclude the IP address by adding it to the Manual Exceptions list.
- C. Add the address range to the Manual Exceptions list and exclude the IP address by selecting the entry.
- **D. Add the specific IP address from the address range to the Manual Exceptions list by using regular expressions to define the entry.**

Answer: D

NEW QUESTION # 256
