

JN0-650 Valid Exam Fee - Quiz First-grade Juniper JN0-650 Reliable Test Testking

Juniper JN0-650 Exam
Prep Guide PDF with
Practice Questions
Pass JN0-650 on Your First Attempt with Proven Exam Strategies

www.ITPassLeader.com
This Juniper JN0-650 Enterprise Routing and Switching Professional Study Guide provides in-depth coverage of advanced routing protocols, enterprise switching concepts, and routing policy implementation in Junos OS. It includes practical configuration examples, troubleshooting strategies, and exam-style practice questions to prepare candidates for the 90-minute JN0-650 certification exam. Ideal for network engineers advancing their professional-level Juniper certification.

Want to crack the Juniper JN0-650 certification test in record time? Look no further than ITPassLeader! Our updated JN0-650 Dumps questions are designed to help you prepare for the exam quickly and effectively. With study materials available in three different formats, you can choose the format that works best for you. Trust ITPassLeader to help you pass the Juniper JN0-650 Certification test with ease.

Juniper JN0-650 Exam Syllabus Topics:

Topic	Details
Topic 1	• EVPN: This section addresses Ethernet VPN technology for Layer 2 over Layer 3 connectivity, covering EVPN route types, VXLAN encapsulation, and multi-homing configurations.
Topic 2	• Ethernet Switching and Spanning Tree: This section covers advanced Layer 2 switching including filter-based VLANs, private VLANs, MVRP, Layer 2 tunneling via Q-in-Q and L2PT, plus MSTP and VSTP protocols.
Topic 3	• IP Multicast: This domain addresses one-to-many communication using multicast routing, covering addressing, ASM vs SSM models, RPF, IGMP • snooping, PIM sparse-mode, rendezvous points, Anycast RP, MSDP, and routing policies.

Topic 4	• IP Telephony Features: This section focuses on features supporting VoIP deployments including Power over Ethernet, LLDP • LLDP-MED protocols, and voice VLAN implementation.
Topic 5	• Interior Gateway Protocols (IGPs): This domain covers internal routing protocols operating within a single autonomous system, including OSPFv2, OSPFv3, and routing policy implementation, along with configuration, troubleshooting, and monitoring skills.

JN0-650 – 100% Free Valid Exam Fee | High Pass-Rate Enterprise Routing and Switching, Professional (JNCIP-ENT) Reliable Test Testking

We apply international recognition third party for the payment of JN0-650 exam dumps, and your money and account will be safe if you choose us. And the third party will protect the interests of you. What's more, free demo is available for JN0-650 training materials, and you can have a try before buying, so that you can know what the complete version is like. We also pass guarantee and money back guarantee. You just need to send us the failure scanned, and we will give you full refund. We have online chat service, and if you have any questions for JN0-650 Training Materials, you can consult us.

Juniper Enterprise Routing and Switching, Professional (JNCIP-ENT) Sample Questions (Q67-Q72):

NEW QUESTION # 67

You have a P-VLAN that spans multiple switches.

In this scenario, how do you enable communication across the P-VLAN?

- A. Configure trunk ports with private-vlan community on the switches.
- B. Configure trunk ports with private-vlan isolated on the switches.
- **C. Configure trunk ports with isolated-vlan <vlan-id> on the switches.**
- D. Configure trunk ports with inter-switch-link on the switches

Answer: C

Explanation:

Private VLANs (PVLANS) provide Layer 2 isolation between ports within the same broadcast domain. When a PVLAN spans multiple switches, a special type of trunk configuration is required to maintain the isolation and community logic across the inter-switch links.

* Isolated VLAN Trunking (Option D):To extend an isolated VLAN across multiple switches, you must configure the trunk port on each switch to allow the isolated VLAN ID. In Junos OS, this is specifically achieved by configuring the interface as a trunk and associating it with the primary VLAN and the specific isolated VLAN. The correct syntax for enabling this inter-switch communication is to configure trunk ports that recognize the isolated VLAN tag (e.g., set interfaces <interface> unit 0 family ethernet-switching vlan members [primary-vlan isolated-vlan]).

* Forwarding Rules:Traffic from an isolated port on Switch A must reach a promiscuous port (often on Switch B) to exit the PVLAN. The inter-switch trunk carries this traffic using the secondary (isolated) VLAN ID, ensuring that it remains isolated from other host ports on the remote switch.

* Option A (inter-switch-link):In standard Junos switching, the inter-switch-link statement is used in Virtual Chassis or specific fabric designs, but for standard PVLAN extension, standard 802.1Q trunking with secondary VLAN IDs is the mechanism used.

* Options B and C:These describe specific portroles(isolated vs. community) rather than the method used to enable trunking between switches.

NEW QUESTION # 68

Which statement is true regarding MD5 authentication in OSPF?

- A. Each device on the network requires a unique key ID.
- B. The MD5 password is not encrypted on the wire.

- C. Each interface on a device requires a unique key ID.
- D. Multiple keys can be configured with different start times.

Answer: D

NEW QUESTION # 69

You are maintaining a large-scale enterprise OSPFv2 network using Juniper devices. To safeguard against excessive flooding of LSAs from neighbors, you decide to enable the database protection feature. Which two statements accurately describe this feature in the Junos OS?

(Choose two.)

- A. Once triggered, the isolate state remains until you manually issue a command to clear it.
- B. The database protection feature limits the number of LSAs accepted from neighbors.
- C. The database protection feature disables the flooding of Type-5 LSAs into stub areas.
- D. The database protection feature can only be configured on broadcast interfaces.

Answer: A,B

Explanation:

The database protection feature protects the router from excessive LSA flooding by limiting the number of LSAs accepted from neighbors. When the configured threshold is exceeded, the neighbor relationship can be placed into an isolate state.

After the isolate state is triggered, it remains active until it is manually cleared by the administrator, preventing continued overload from excessive LSAs.

NEW QUESTION # 70

Which two statements are true regarding bidirectional PIM? (Choose two.)

- A. Devices only store group specific entries.
- B. Requires encapsulation for register messages.
- C. Forwarding paths can be suboptimal.
- D. Devices store source and group entries.

Answer: A,C

NEW QUESTION # 71

Which protocol is primarily used to establish a multicast routing table in Junos?

- A. PIM
- B. IS-IS
- C. RIP
- D. BGP

Answer: A

NEW QUESTION # 72

.....

Most of the candidates remain confused about the format of the actual JN0-650 exam and the nature of questions therein. So our JN0-650 exam questions can perfectly provide them with the newest information about the exam not only on the content but also on the format. And to help them adjust to the real exam, we also developed the Software version of the JN0-650 learning prep which can simulate the real exam.
