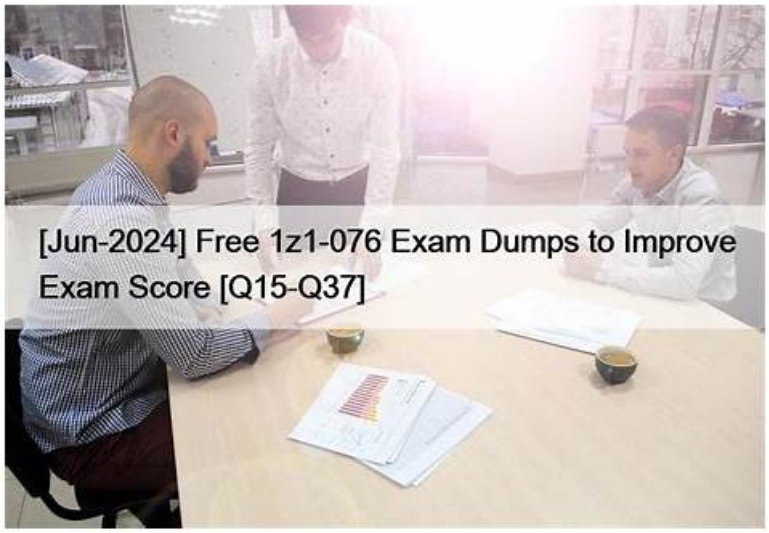
1z1-076 Exam Braindumps - 1z1-076 Practice Test Online



BONUS!!! Download part of GetValidTest 1z1-076 dumps for free: https://drive.google.com/open?id=1ML8kJ1lV4pOz0zujuQx2VyokZTq-fDYo

As is known to us, there are best sale and after-sale service of the 1z1-076 certification training materials all over the world in our company. Our company has employed a lot of excellent experts and professors in the field in the past years, in order to design the best and most suitable 1z1-076 Latest Questions for all customers. More importantly, it is evident to all that the 1z1-076 training materials from our company have a high quality, and we can make sure that the quality of our 1z1-076 exam questions will be higher than other study materials in the market.

Oracle 1z1-076 Exam Syllabus Topics:

Topic	Details
Topic 1	• Oracle Data Guard Basics: This topic covers the essential architecture and concepts of Oracle Data Guard. It includes sub-topics such as the physical and logical standby database comparison, benefits of Data Guard, and its integration with multi-tenant databases.
Topic 3	• Creating a Data Guard Broker Configuration: This section delves into the practical aspects of creating and managing a Data Guard broker configuration, including command-line and Enterprise Manager approaches.
Topic 4	• Performing Role Transitions: Here, the concept of database roles is explained, along with the steps for performing switchovers, failovers, and maintaining physical standby sessions during role transitions.
Topic 5	• Patching and Upgrading Databases in a Data Guard Configuration: This section provides guidance on patching and upgrading databases in a Data Guard environment, along with performance optimization techniques and monitoring considerations.
Topic 6	• Enhanced Client Connectivity in a Data Guard Environment: This topic focuses on enhancing client connectivity in a Data Guard setup and implementing failover procedures for seamless client redirection. It also covers application continuity to ensure uninterrupted operations during role transitions.
Topic 7	• Monitoring a Data Guard Broker Configuration: The topic covers the use of Enterprise Manager and DGMGRL to monitor Data Guard configurations and explains the various data protection modes available.

1z1-076 Practice Test Online - Pass Leader 1z1-076 Dumps

No one can be responsible for you except yourself. So you must carefully plan your life and future career development. Our 1z1-076 training quiz might offer you some good guidance. Maybe you never find out your real interest in the past. Now, everything is different. With our 1z1-076 Study Guide, you will find that studying knowledge and making a progress is quite interesting and easy. And the most important is that you will get the best reward according to the 1z1-076 certification.

Oracle Database 19c: Data Guard Administration Sample Questions (Q30-Q35):

NEW QUESTION # 30
You must design an Oracle Data Guard configuration for a DSS database that meets these permanent requirements:
1. Creating and maintaining bitmap indexes should not impact the performance of the primary database.
2. Creating and maintaining materialized views should not impact the performance of the primary database.
Additionally, there are these requirements, only one of which is ever done at any one time:
1. It should be possible to apply designated patches with a minimum amount of downtime.
2. Upgrading to a new database release should be performed with the least possible amount of downtime.
3. New application software releases should be tested against an exact and up-to-date replica of the primary database.
Which configuration meets these requirements with the fewest of databases?

- A. a primary database with one logical standby database
- B. a primary database with two logical standby databases
- C. a primary database with one physical standby database
- D. a primary database with two physical standby databases
- E. A primary database with one logical and one physical standby database

Answer: A

Explanation:
* Logical standby databases allow the execution of DDL and DML operations, which makes them suitable for maintaining bitmap indexes and materialized views without affecting the performance of the primary database .
* Logical standby databases can be used for performing rolling upgrades and patching with minimum downtime, meeting another requirement .
* They also enable the testing of new application software releases against an up-to-date replica of the primary database, fulfilling the last requirement.
Other configurations involving physical standby databases or combinations of logical and physical standby databases might not meet all the specified requirements as efficiently or with the same level of performance isolation for the primary database.

NEW QUESTION # 31
Which THREE statements are true about Far Sync instances?

- A. A primary database can ship redo directly to multiple Far Sync instances.
- B. The Data Guard Broker must be used to deploy and manage Far Sync instances.
- C. They work with any protection level.
- D. They use an spfMe, a standby controlfile, and standby redo logs.
- E. They enable standby databases to be configured at remote distances from the primary without impacting performance on the primary.

Answer: A,B,E

Explanation:
Far Sync instances are a feature of Oracle Data Guard designed to support zero data loss protection over long distances:
The Data Guard Broker must be used to deploy and manage Far Sync instances (A): Data Guard Broker simplifies the deployment and management of Far Sync instances, which are an integral part of zero data loss protection configurations.
They enable standby databases to be configured at remote distances from the primary without impacting performance on the primary (C): Far Sync instances are designed to receive redo from the primary database and then forward it to a remote standby database, thereby avoiding any performance impact on the primary database itself.
A primary database can ship redo directly to multiple Far Sync instances (E): A primary database can be configured to send redo logs to more than one Far Sync instance, which can then forward the redo to their respective remote standby databases.

NEW QUESTION # 32
Which three can be done using Data Guard Broker?

- A. Create a new physical standby database.
- B. Define logical standby database skip rules.
- C. Monitoring and managing redo transport services, and log apply services.
- D. Converting physical standby databases to snapshot standby databases.
- E. Automating failover to a specified target standby database.
- F. Configuring the standby control file, server parameter file, and data files for a standby database.

Answer: A,D,E

NEW QUESTION # 33
Examine the Data Guard configuration:
DGMGRL> show configuration;
Configuration - Animals
Protection Mode: MaxAvailability
Databases:
dogs - Primary database
sheep - Snapshot standby database
cats - Physical standby database
Fast-Start Failover: DISABLED
Configuration Status:
SUCCESS
You receive an error while attempting to raise the protection mode to Maximum Protection:
DGMGRL> edit configuration set protection mode as maxprotection;
Error: ORA-16627: operation disallowed since no standby databases would remain to support protection mode Failed.
Which is the minimum statement, or sequence of statements you must execute to enable successful raising of the protection mode to Maximum Protection?

- A. DGMGRL> edit database dogs set property LogxptMode=sync;
  DGMGRL> edit database sheep set property LogxptMode=sync;
- B. DGMGRL> edit database dogs set property LogXptMode=sync;
  DGMGRL> edit database sheep set property LogxptMode=sync;
  DGMGRL> edit database cats set property LogXptMode=sync;
- C. DGMGRL> edit database sheep set property LogXptMode=sync;
- D. DGMGRL> edit database dogs set property LogXptMode=sync;
  DGMGRL> edit database cats set property LogXptMode=sync;
- E. DGMGRL> edit database cats set property LogXptMode=sync;
- F. DGMGRL> edit database dogs set property LogxptMode=sync;

Answer: D

NEW QUESTION # 34
Which TWO statements are true about Real-Time Query?

- A. Disabling Real-Time Query prevents the automatic start of redo apply when a physical standby databases opened read only.
- B. A standby database enabled for Real-Time Query cannot be the Fast-Start Failover target of the Data Guard configuration.
- C. Real-Time Query sessions can be connected to a Far Sync instance.
- D. Real-Time Query has no limitations regarding the protection level of the Data Guard environment.
- E. Setting standby_max_data_delay=0 requires synchronous redo transport.

Answer: A,E

Explanation:
Real-Time Query is a feature that allows queries to be run on a physical standby database while it is applying redo data. The relevant truths about it are:
* Setting standby_max_data_delay=0 requires synchronous redo transport (A): For the real-time apply feature to function with no data delay (zero delay), synchronous redo transport must be used. This setting ensures that the data on the standby database is as current as possible before queries are executed against it.
* Disabling Real-Time Query prevents the automatic start of redo apply when a physical standby database is opened read-only (C): If Real-Time Query is disabled, opening the standby database in read-only mode will not start the redo apply process automatically. Redo apply needs to be manually started to synchronize the standby database with the primary.References:

NEW QUESTION # 35
.....

Our customer service staff will be patient to help you to solve them. At the same time, if you have problems with downloading and installing, Oracle Database 19c: Data Guard Administration torrent prep also has dedicated staff that can provide you with remote online guidance. In order to allow you to use our products with confidence, 1z1-076 Test Guide provide you with a 100% pass rate guarantee. Once you unfortunately fail the exam, we will give you a full refund, and our refund process is very simple.
