It can be difficult to prepare for the Palo Alto Networks NetSec-Pro exam successfully, but with actual and updated Palo Alto Networks Network Security Professional (NetSec-Pro) exam questions, it can be much simpler. The difference between successful and failed NetSec-Pro Certification Exam attempts can be determined by studying with real NetSec-Pro exam questions.

In the era of rapid development in the IT industry, we have to look at those IT people with new eyes. They use their high-end technology to create many convenient place for us. And save a lot of manpower and material resources for the state and enterprises. And even reached unimaginable effect. Of course, their income must be very high. Do you want to be the kind of person? Do you envy them? Or you are also IT person, but you do not get this kind of success. Do not worry, Real4Prep's Palo Alto Networks NetSec-Pro Exam Material can help you to get what you want. To select Real4Prep is equivalent to choose a success.

Three Main Formats of Palo Alto Networks NetSec-Pro Exam Practice Material

In addition to the Palo Alto Networks NetSec-Pro PDF questions, we offer desktop NetSec-Pro practice exam software and web-based NetSec-Pro practice test to help applicants prepare successfully for the actual Palo Alto Networks Network Security Professional exam. These Palo Alto Networks Network Security Professional practice exams simulate the actual NetSec-Pro Exam conditions and provide an accurate assessment of test preparation. Our desktop-based NetSec-Pro practice exam software needs no internet connection.

Palo Alto Networks Network Security Professional Sample Questions (Q18-Q23):

NEW QUESTION # 18

Which action allows an engineer to collectively update VM-Series firewalls with Strata Cloud Manager (SCM)?

- A. Scheduling software update
- B. Setting a target OS version
- **C. Creating a device grouping rule**
- D. Creating an update grouping rule

Answer: C

Explanation:

Device grouping rules in SCM allow administrators to organize firewalls into logical groups and collectively manage updates or configuration pushes across those groups.

"SCM allows you to create device group rules, enabling streamlined management and collective updates of multiple NGFW instances." (Source: SCM Device Grouping) This approach ensures consistency in software versions and configuration baselines across large deployments.

NEW QUESTION # 19

After a firewall is associated with Strata Cloud Manager (SCM), which two additional actions are required to enable management of the firewall from SCM? (Choose two.)

- A. Configure a Security policy allowing "stratacloudmanager.paloaltonetworks.com" for all users.
- **B. Install a device certificate.**
- C. Deploy a service connection for each branch site and connect with SCM.
- **D. Configure NTP and DNS servers for the firewall.**

Answer: B,D

Explanation:

To fully manage a firewall from Strata Cloud Manager (SCM), it's essential to establish trust and ensure reliable connectivity.

Configure NTP and DNS servers

The firewall must have accurate time (NTP) and name resolution (DNS) to securely communicate with SCM and related cloud services.

"To ensure successful management, configure the firewall's NTP and DNS settings to synchronize time and resolve domain names such as stratacloudmanager.paloaltonetworks.com." (Source: SCM Onboarding Requirements) Install a device certificate A device certificate authenticates the firewall's identity when connecting to SCM.

"The device certificate authenticates the firewall to Palo Alto Networks cloud services, including SCM. It's a fundamental requirement to establish secure connectivity." (Source: Device Certificates) These steps ensure trust, secure communication, and successful onboarding into SCM.

NEW QUESTION # 20

A network security engineer wants to forward Strata Logging Service data to tools used by the Security Operations Center (SOC) for further investigation. In which best practice step of Palo Alto Networks Zero Trust does this fit?

- A. Map and Verify Transactions
- B. Implementation
- **C. Report and Maintenance**
- D. Standards and Designs

Answer: C

Explanation:

The "Report and Maintenance" step of the Zero Trust model emphasizes ongoing monitoring, analysis, and reporting to ensure the environment remains secure over time.

"The Report and Maintenance phase includes continuous monitoring, log forwarding, and sharing of security telemetry to third-party tools to maintain and validate Zero Trust implementation." (Source: Zero Trust Best Practices) By forwarding logs to SOC tools, the engineer ensures comprehensive visibility and proactive threat hunting.

NEW QUESTION # 21

A network engineer pushes specific Panorama reports of new AI URL category types to branch NGFWs. Which two report types achieve this goal? (Choose two.)

- A. Custom
- B. PDF summary
- C. SNMP
- D. CSV export

Answer: A,B

Explanation:

Panorama allows engineers to create custom reports and generate PDF summary formats for consistent reporting across NGFWs.

Custom Reports

"Custom Reports provide tailored reporting based on URL categories, application usage, and threat visibility.

They are generated within Panorama and can include data on newly categorized AI URL types." (Source: Panorama Reports) PDF Summaries

"You can generate PDF summary reports to distribute these insights across branch firewalls, providing an easy-to-read format for compliance and operational review." (Source: Export Reports as PDF) Together, these options provide a consistent, standardized method to push insights about AI-based URL categories to branch devices.

NEW QUESTION # 22

Which NGFW function can be used to enhance visibility, protect, block, and log the use of Post- quantum Cryptography (PQC)?

- A. DNS Security profile
- B. Decryption policy
- C. Security policy
- D. Decryption profile

Answer: B

Explanation:

A decryption policy allows the firewall to inspect encrypted traffic and apply security controls to Post- quantum Cryptography (PQC) usage, as PQC algorithms are typically implemented within encrypted sessions.

"Decryption policies enable the firewall to see and control encrypted traffic. This visibility and control extend to new cryptographic algorithms, including PQC, to ensure that security measures are applied consistently." (Source: Palo Alto Networks Decryption Overview) By decrypting sessions, you ensure that even PQC traffic can be inspected, logged, and subject to security profiles for visibility and policy enforcement.

NEW QUESTION # 23

.....

By keeping customer satisfaction in mind, Real4Prep offers you a free demo of the Palo Alto Networks Network Security Professional (NetSec-Pro) exam questions. As a result, it helps you to evaluate the Palo Alto Networks Network Security Professional (NetSec-Pro) exam dumps before making a purchase. Real4Prep is steadfast in its commitment to helping you pass the Palo Alto Networks Network Security Professional (NetSec-Pro) exam. A full refund guarantee (terms and conditions apply) offered by Real4Prep will save you from fear of money loss.
