EC-COUNCIL Certified SOC Analyst (CSA) Sample Questions (Q85-Q90):

NEW QUESTION # 85

Which of the following Windows Event Id will help you monitors file sharing across the network?

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

NEW QUESTION # 86

Which of the following tool is used to recover from web application incident?

- A. Proxy Workbench
- B. Symantec Secure Web Gateway
- C. CrowdStrike Falcon™ Orchestrator
- D. Smoothwall SWG

Answer: C

Explanation:

CrowdStrike Falcon™ Orchestrator is a tool designed to automate the response to security incidents, including those involving web applications. It integrates with the CrowdStrike Falcon platform to provide a range of capabilities such as real-time response, incident investigation, and remediation. This makes it suitable for recovering from web application incidents by allowing security teams to quickly identify, understand, and resolve threats.

References The EC-Council's Certified SOC Analyst (CSA) course materials and study guides discuss various tools and their applications in incident response. CrowdStrike Falcon™ Orchestrator is recognized in the industry for its incident response capabilities, aligning with the learning resources provided by EC- Council for SOC Analysts.

NEW QUESTION # 87

What does HTTPS Status code 403 represents?

- A. Internal Server Error
- B. Not Found Error
- C. Forbidden Error
- D. Unauthorized Error

Answer: C

Explanation:

The HTTPS status code 403 represents a Forbidden Error. This error occurs when the server understands the request but refuses to authorize it. Unlike the Unauthorized Error (401), which suggests that the request might be authorized if the client re-authenticates, the Forbidden Error indicates that re-authenticating will make no difference and access is denied regardless of authentication status. The Forbidden Error is tied to the application logic, such as insufficient rights to a resource or the server being programmed to deny access to a particular resource to the client. It is not related to the client's credentials but rather to the permissions set by the server for the requested resource.

References: The EC-Council SOC Analyst course materials and study guides discuss various HTTP status codes as part of understanding web application security and interpreting web logs within a Security Operations Center (SOC) context. The materials explain the meaning of the 403 Forbidden Error and its implications for cybersecurity analysis¹²³.

NEW QUESTION # 88

Emmanuel is working as a SOC analyst in a company named Tobey Tech. The manager of Tobey Tech recently recruited an Incident Response Team (IRT) for his company. In the process of collaboration with the IRT, Emmanuel just escalated an incident to the IRT.

What is the first step that the IRT will do to the incident escalated by Emmanuel?

- A. Incident Analysis and Validation
- B. Incident Prioritization
- C. Incident Classification
- D. Incident Recording

Answer: A

Explanation:

When an incident is escalated to the Incident Response Team (IRT), the first step they undertake is Incident Analysis and Validation. This step is crucial to ensure that the incident is genuine and to understand its nature and scope. The IRT will analyze the information provided by the SOC analyst, validate the incident against known patterns or indicators of compromise, and gather additional information if necessary. This initial analysis helps in determining the severity of the incident and guides the subsequent steps in the

incident response process.

NEW QUESTION # 89

Identify the attack when an attacker by several trial and error can read the contents of a password file present in the restricted etc folder just by manipulating the URL in the browser as shown:

<http://www.terabytes.com/process.php/../../../../etc/passwd>

- A. Directory Traversal Attack
- B. Denial-of-Service Attack
- C. SQL Injection Attack
- D. Form Tampering Attack

Answer: A

Explanation:

The attack described is a Directory Traversal Attack. This type of attack occurs when an attacker exploits vulnerabilities in a web application (or a web server's software) to gain unauthorized access to files and directories that are stored outside of the web root folder. By manipulating variables that reference files with ..

/ sequences (also known as dot-dot-slash), the attacker can move up the directory hierarchy and access files or directories that should be restricted. This can lead to information disclosure, such as reading sensitive files like /etc/passwd, which contains user password details in Unix-based systems.

In the given URL <http://www.terabytes.com/process.php/../../../../etc/passwd>, the attacker uses the ../ pattern to navigate up from the current directory where process.php resides, aiming to reach the root directory and then descend into the /etc/ directory to access the passwd file. This is a classic example of a Directory Traversal Attack.

References: The EC-Council's Certified SOC Analyst course covers various types of cyber attacks, including Directory Traversal Attacks. Specific references to this type of attack can be found in the EC-Council's official training materials for the Certified SOC Analyst (CSA) program, such as the CSA study guide and related courses that discuss web application vulnerabilities and attacks123.
