NEW QUESTION #57

You created a new one-time payment plan and enabled employees to request payments for themselves. While testing, you notice that an existing custom validation for the Request One-Time Payment process also applies to the Request One-Time Payment for Self process.

How can you ensure these validations do not run for employees requesting one-time payments for themselves?

- A. Use Configure Options Fields for Request One Time Payment for Self to exclude the fields that are triggering the validations.
- B. Use Maintain Custom Validations and use One Time Payment Event for Self field to exclude these types of events.
- C. Use Maintain Custom Validations and add new validations that should apply only for employees requesting one-time payments for themselves.
- D. Remove Employee as Self from the Worker Data: Request One-Time Payment security domain.

Answer: B

Explanation:

- * Maintain Custom Validations allows you to refine which events validations apply to.
- * Workday distinguishes between Request One-Time Payment (manager/HR initiated) and Request One-Time Payment for Self (employee initiated).

Why not the others?

- * B. Add new validations# Would duplicate rules rather than exclude them.
- * C. Remove Employee as Self from security domain# Would block employees from submitting requests, not exclude validations.
- * D. Configure Options Fields# Controls fields displayed, not validation logic.
