It is not easy to continue keeping the good quality of a product and at the same time to continue keeping innovating it to become better. But we persisted for so many years on the Secure-Software-Design exam questions. Our Secure-Software-Design practice guide just wants to give you a product that really makes you satisfied. I know that we don't say much better than letting you experience our Secure-Software-Design Training Questions yourself. You can free download the demos of the Secure-Software-Design learning quiz to have a try!

Although our company has designed the best and most suitable Secure-Software-Design learn prep, we also do not stop our step to do research about the Secure-Software-Design study materials. All experts and professors of our company have been trying their best to persist in innovate and developing the Secure-Software-Design test training materials all the time in order to provide the best products for all people and keep competitive in the global market. We believe that the Secure-Software-Design Study Materials will keep the top selling products. We sincerely hope that you can pay more attention to our Secure-Software-Design study questions.

WGU Secure-Software-Design Exam Syllabus Topics:

Topic	Details
-------	---------

Topic 1	<ul style="list-style-type: none"> • Design Pattern Selection and Implementation: This section of the exam measures skills of Software Developers and Software Architects and covers the selection and implementation of appropriate design patterns. Learners examine common design patterns and their applications in software development. The material focuses on understanding when and how to apply specific patterns to solve recurring design problems and improve code organization.
Topic 2	<ul style="list-style-type: none"> • Software Architecture and Design: This module covers topics in designing, analyzing, and managing large scale software systems. Students will learn various architecture types, how to select and implement appropriate design patterns, and how to build well structured, reliable, and secure software systems.
Topic 3	<ul style="list-style-type: none"> • Large Scale Software System Design: This section of the exam measures skills of Software Architects and covers the design and analysis of large scale software systems. Learners investigate methods for planning complex software architectures that can scale and adapt to changing requirements. The content addresses techniques for creating system designs that accommodate growth and handle increased workload demands.

WGUSecure Software Design (KEO1) Exam Sample Questions (Q105-Q110):

NEW QUESTION # 105

Senior IT staff has determined that a new product will be hosted in the cloud and will support web and mobile users. Developers will need to deliver secure REST services. Android and IOS mobile apps. and a web application. Developers are currently determining how to deliver each part of the overall product.

Which phase of the software development lifecycle (SDLC) is being described?

- A. Deployment
- B. Maintenance
- C. End of life
- **D. Design**

Answer: D

Explanation:

The phase being described is the Design phase of the SDLC. During this phase, developers and IT staff determine the architectural and operational details of the product, which includes decisions on how to deliver various components such as secure REST services, mobile apps, and web applications. The Design phase is crucial for setting the foundation for the development work that will follow, ensuring that the product will be secure, scalable, and maintainable.

References: The information aligns with the descriptions of the SDLC phases provided in resources such as GitHub's explanation of the SDLC¹ and other industry-standard software development lifecycle resources²³⁴.

NEW QUESTION # 106

The security testing team received a report from one of the contracted penetration testing vendors that details a flaw discovered in the login component of the new software product, along with a recommended fix.

Which phase of the penetration testing process is the team in?

- **A. Assess**
- B. Identify
- C. Evaluate and plan
- D. Deploy

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The team is in the Assess phase of penetration testing. This phase involves actively testing the software, identifying vulnerabilities, and documenting findings with recommendations. Receiving a report detailing a discovered flaw confirms that testing has been conducted and results are being evaluated. The Identify (A) phase involves defining scope and targets, Evaluate and Plan (B) covers planning test activities, and Deploy (C) refers to executing the test environment setup. The OWASP Penetration Testing Guide and NIST SP 800-

115 clarify that assessment includes vulnerability discovery and documentation.

NEW QUESTION # 107

Company leadership has discovered an untapped revenue stream within its customer base and wants to meet with IT to share its vision for the future and determine whether to move forward.

Which phase of the software development lifecycle (SDLC) is being described?

- A. Planning
- B. Requirements
- C. Implementation
- D. Design

Answer: A

Explanation:

The phase being described is the Planning phase of the SDLC. This initial stage involves gathering business requirements and evaluating the feasibility of the project. It's when the company leadership would typically meet with IT and other stakeholders to share visions for the future, discuss potential revenue streams, and determine the project's direction before moving forward with development. This phase is crucial for setting the groundwork for all subsequent phases of the SDLC.

NEW QUESTION # 108

Security testers have completed testing and are documenting the results of vulnerability scans and penetration analysis. They are also creating documentation to share with the organization's largest customers.

Which deliverable is being prepared?

- A. Open-source licensing review report
- B. Customer engagement framework
- C. Security testing reports
- D. Remediation report

Answer: C

Explanation:

After completing vulnerability scans and penetration analysis, security testers document the results to share with stakeholders, such as the organization's largest customers. The deliverable being prepared in this context is the Security testing reports. These reports typically include detailed findings from the security assessments, explanations of the vulnerabilities discovered, the potential risks they pose, and recommendations for remediation. The purpose of these reports is to provide transparency about the security posture of the software or system and to guide the organization in addressing the identified security issues^{1, 2}.
