Data-Architect Latest Dumps Ppt - Data-Architect Exam Simulator

Desktop Salesforce Certified Data Architect (Data-Architect) practice test software is the first format available at Pass4sures. This

format can be easily used on Windows PCs and laptops. The Salesforce Certified Data Architect (Data-Architect) practice exam software works without an internet connection, with the exception of license verification. One of the excellent features of this Salesforce Certified Data Architect (Data-Architect) desktop-based practice test software is that it includes multiple mock tests that have Salesforce Data-Architect practice questions identical to the actual exam, providing users with a chance to get Salesforce Certified Data Architect (Data-Architect) real exam experience before even attempting it.

Salesforce Certified Data Architect Sample Questions (Q60-Q65):

NEW QUESTION # 60

Cloud Kicks has the following requirements:

- * Their Shipment custom object must always relate to a Product, a Sender, and a Receiver (all separate custom objects).
- * If a Shipment is currently associated with a Product, Sender, or Receiver, deletion of those records should not be allowed.
- * Each custom object must have separate sharing models.

What should an Architect do to fulfill these requirements?

- A. Create a Master-Detail relationship to each of the three parent records.
- **B. Create a required Lookup relationship to each of the three parent records.**
- C. Associate the Shipment to each parent record by using a VLOOKUP formula field.
- D. Create two Master-Detail and one Lookup relationship to the parent records.

Answer: B

NEW QUESTION # 61

Universal Containers (UC) has multi -level account hierarchies that represent departments within their major Accounts. Users are creating duplicate Contacts across multiple departments. UC wants to clean the data so as to have a single Contact across departments. What two solutions should UC implement to cleanse their data?

Choose 2 answers

- A. Make use of the Merge Contacts feature of Salesforce to merge duplicates for an Account.
- B. Use Workflow rules to standardize Contact information to identify and prevent duplicates.
- **C. Make use of a third -party tool to help merge duplicate Contacts across Accounts.**
- **D. Use Data.com to standardize Contact address information to help identify duplicates.**

Answer: C,D

Explanation:

Making use of a third-party tool to help merge duplicate Contacts across Accounts and using Data.com to standardize Contact address information to help identify duplicates are two solutions that UC should implement to cleanse their data and have a single Contact across departments. A third-party tool, such as an app from the AppExchange, can provide advanced features and capabilities for finding and merging duplicate Contacts across different Accounts, based on various criteria and rules. Data.com can provide address verification and standardization services that can enhance the quality and consistency of Contact address information and make it easier to identify duplicates. The other options are not feasible or effective for cleansing the data, as they would either not work across different Accounts, not address the root cause of duplication, or not provide sufficient functionality for merging duplicates

NEW QUESTION # 62

Which two statements are accurate with respect to performance testing a Force.com application?

- **A. Applications with highly customized code or large volumes should be performance tested.**
- **B. A performance test plan must be created and submitted to Salesforce customer support.**
- C. All Force.com applications must be performance tested in a sandbox as well as production.
- D. Application performance benchmarked in a sandbox can also be expected in production.

Answer: A,B

NEW QUESTION # 63

UC has a variety of systems across its technology landscape, including SF, legacy enterprise resource planning (ERP) applications

and homegrown CRM tools. UC has decided that they would like to consolidate all customer, opportunity and order data into Salesforce as part of its master data management (MDM) strategy.

What are the 3 key steps that a data architect should take when merging data from multiple systems into Salesforce? Choose 3 answers:

- A. Install a 3rd party AppExchange tool to handle the merger
- B. Create new fields to store additional values from all the systems.
- C. Work with Stakeholders to define record and field survivorship rules
- D. Analyze each system's data model and perform gap analysis
- E. Utilize an ETL tool to merge, transform and de-duplicate data.

Answer: C,D,E

NEW QUESTION # 64

Company S was recently acquired by Company T. As part of the acquisition, all of the data for the Company S's Salesforce instance (source) must be migrated into the Company T's Salesforce instance (target). Company S has 6 million Case records. An Architect has been tasked with optimizing the data load time.

What should the Architect consider to achieve this goal?

- A. Load the data in multiple sets using Bulk API parallel processes.
- B. Utilize the Salesforce Org Migration Tool from the Setup Data Management menu.
- C. Pre-process the data, then use Data Loader with SOAP API to upsert with zip compression enabled.
- D. Directly leverage Salesforce-to-Salesforce functionality to load Case data.

Answer: C

NEW QUESTION # 65

.....
