SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q43-Q48):

NEW QUESTION # 43

Which of the following accurately describes the migration of flex master data templates using the migration tool?

- A. Only the data of the flex master data templates is migrated; templates must be created manually.
- **B. The templates are migrated by the tool, but the data must be loaded manually later.**
- C. Neither the templates nor the data is migrated using the tool.
- D. Both the templates and their data are fully migrated by the tool.

Answer: B

Explanation:

In SAP Ariba, the migration tool (Intelligent Configuration Manager - ICM) migrates flex master data templates (the structure and definitions), but it does not migrate the actual master data records. The master data itself must be manually exported from the source and imported into the target environment after templates are migrated. This separation helps ensure data integrity and allows for more controlled migration processes.

NEW QUESTION # 47

In a Greenfield deployment scenario, how should translation migrations be performed for header field labels, help tips, and validity condition error messages?

- A. Contact an SAP Deployment lead for customization help.
- B. User with Partner Administrator can configure translation.
- C. Translations are included in migrations and are listed as AMLStringResource in the migration UI.
- D. Create a package to migrate translations by ICM.

Answer: C

Explanation:

In Greenfield deployments, translations for custom field labels, help tips, and validation/error messages are migrated as part of the configuration migration package and are represented in the migration UI as AMLStringResource entries. This structured approach ensures all language-specific content is consistently moved alongside configuration settings.

While administrators and deployment leads may support translation tasks, the migration of translation strings is managed automatically via this AML-based mechanism, not through manual reconfiguration or separate ICM packages.

This ensures a seamless multilingual user experience immediately upon go-live without requiring additional manual translation imports.
