## 100% Pass Quiz 2026 Microsoft GH-900 Accurate Reliable Real Exam

Dumpcollection GH-900 exam training materials can help you save a lot of time and energy, and make you yield twice the result with half effort to pass GH-900 certification exam. After you purchase our GH-900 exam dumps, we will also provide one year free renewal service for you. If there's any quality problem in GH-900 Exam Dumps you buy or you fail GH-900 certification exam, we promise to give you a full refund unconditionally.

### Microsoft GitHub Foundations Sample Questions (Q97-Q102):

#### NEW QUESTION # 97

What are the key areas of focus for GitHub? (Choose three.)

- A. Providing a social media platform for project managers
- B. Building a technology platform for secure code sharing and collaboration
- C. Providing access and opportunities for developers
- D. Nurturing a community that supports open source principles
- E. Hosting video calls with other developers

**Answer: B,C,D**

Explanation:

GitHub focuses on several key areas that align with its mission to support developers and foster collaboration:

Nurturing a Community That Supports Open Source Principles:

Option A is correct. GitHub is a major advocate for open-source software development, providing tools and platforms that enable open collaboration. GitHub hosts millions of open-source projects and supports a community-driven approach to software development.

Providing Access and Opportunities for Developers:

Option B is correct. GitHub provides a wide range of resources, such as GitHub Education, GitHub Actions, and GitHub Marketplace, to empower developers. These tools and opportunities help developers of all levels to learn, contribute, and improve their skills.

Building a Technology Platform for Secure Code Sharing and Collaboration:

Option D is correct. GitHub's core function is to provide a platform where developers can securely share code and collaborate. Features like private repositories, branch protections, and GitHub Actions for CI/CD (Continuous Integration/Continuous Deployment) workflows highlight this focus.

#### NEW QUESTION # 98

What are two recommended ways of improving the discoverability of a repository?

(Each answer presents a complete solution. Choose two.)

- A. Create a README file describing the repository.
- B. Add labels to categorize the repository.
- C. Add topics to classify the repository.
- D. Register the repository with GitHub search.

**Answer: A,C**

Explanation:

Two recommended ways to improve the discoverability of a repository on GitHub are:

B . Create a README file describing the repository: A well-written README file provides essential information about the project, such as what it does, how to use it, and how to contribute. This is often the first thing potential users or contributors will see, making it critical for discoverability.

D . Add topics to classify the repository: Adding topics to your repository helps classify it under specific categories, making it easier for others to find it through GitHub's search and exploration features. Topics act like tags, helping to connect your project with users interested in similar subjects.

Registering a repository with GitHub search and adding labels are not applicable actions for improving discoverability in the broader sense.

#### NEW QUESTION # 99

What best describes Markdown?

- **A. Markup language**
- B. Scripting language
- C. Programming language
- D. Containerization solution
- E. Version control system

**Answer: A**

Explanation:

Markdown is a lightweight markup language with plain-text formatting syntax. It is designed to be easy to write and read in its raw form, and it can be converted into HTML and other formats. Markdown is commonly used for formatting readme files, writing messages in online discussion forums, and creating rich text documents.

Markup Language:

Option A is correct because Markdown is indeed a markup language. It is not a programming language, scripting language, version control system, or containerization solution.

Incorrect Options:

Option B is incorrect because Markdown is not a programming language; it does not involve control structures or variables.

Option C is incorrect because Markdown is not used for scripting or automation.

Option D is incorrect because Markdown does not manage version control.

Option E is incorrect because Markdown is not related to containerization technologies like Docker.

#### **NEW QUESTION # 100**

Which of the following best describes GitHub flow?

- **A. A lightweight workflow that allows for safe experimentation with new ideas and collaboration on projects through branching, pull requests, and merging**
- B. A branching model that uses feature branches and multiple primary branches
- C. A strategy where separate branches are created for each release, and pull requests are used to collaborate on and approve releases
- D. A strict workflow that enforces a linear development process with all changes made directly on the main branch

**Answer: A**

Explanation:

GitHub Flow is a simple, yet powerful, branching strategy that is widely used in modern software development. It emphasizes collaboration and flexibility.

\* GitHub Flow:

\* Option C is correct because GitHub Flow is a lightweight workflow designed for safe experimentation and collaboration. It involves creating branches for new features or fixes, opening pull requests for review, and merging changes back into the main branch after approval.

\* Incorrect Options:

\* Option A is incorrect because GitHub Flow uses a single main branch, not multiple primary branches.

\* Option B is incorrect because GitHub Flow is not specifically designed around releases; it is more focused on continuous development and integration.

\* Option D is incorrect because GitHub Flow is not strict or linear; it encourages branching and pull requests rather than direct changes on the main branch.

#### **NEW QUESTION # 101**

What does a CODEOWNERS file do in a repository?

- **A. Requires peer code review for code changes**
- B. Restricts who can edit specific files

- C. Sets the reviewers for pull requests automatically
- D. Defines access permissions for the repository

**Answer: C**

Explanation:

The CODEOWNERS file in a GitHub repository is used to define individuals or teams that are responsible for specific parts of the codebase. When changes are made to files or directories that match the patterns specified in the CODEOWNERS file, GitHub automatically requests reviews from the listed code owners.

\* Setting Reviewers Automatically:

\* Option D is correct because the primary purpose of a CODEOWNERS file is to automatically set reviewers for pull requests that affect the specified files or directories. This ensures that the appropriate team members are notified and review the changes before they are merged.

\* Incorrect Options:

\* Option A is incorrect because the CODEOWNERS file does not restrict who can edit specific files; it only influences who is required to review changes.

\* Option B is partially related but not fully accurate because while CODEOWNERS does require certain reviews, it does not mandate peer review for all code changes.

\* Option C is incorrect because the CODEOWNERS file does not define access permissions for the repository; it deals with code review processes.
