

CDCP study materials & CDCP exam preparation & CDCP pass score

What's more, part of that PDFTorrent CDCP dumps now are free: https://drive.google.com/open?id=1dqv_y-xDZxU_cSbGiJgxWzNNZUTOkOFL

PDFTorrent's EXIN CDCP exam training materials is the best training materials. If you are an IT staff, it will be your indispensable training materials. Do not take your future betting on tomorrow. PDFTorrent's EXIN CDCP exam training materials are absolutely trustworthy. We are dedicated to provide the materials to the world of the candidates who want to participate in IT exam. To get the EXIN CDCP Exam Certification is the goal of many IT people & Network professionals. The pass rate of PDFTorrent is incredibly high. We are committed to your success.

As the authoritative provider of CDCP actual exam, we always pursue high pass rate compared with our peers to gain more attention from those potential customers. We guarantee that if you follow the guidance of our CDCP learning materials, you will pass the exam without a doubt and get a certificate. Our CDCP Exam Practice is carefully compiled after many years of practical effort and is adaptable to the needs of the CDCP exam. With high pass rate of more than 98%, you are bound to pass the CDCP exam.

Simulate the Real Exam with EXIN CDCP Practice Exams

Our company has successfully launched the new version of the CDCP study materials. Perhaps you are deeply bothered by preparing the CDCP exam. Now, you can totally feel relaxed with the assistance of our CDCP study materials. Our products are reliable and excellent. What is more, the passing rate of our CDCP Study Materials is the highest in the market. Purchasing our CDCP study materials means you have been half success. Good decision is of great significance if you want to pass the CDCP exam for the first time.

EXIN CDCP Exam Syllabus Topics:

Topic	Details
Topic 1	• Light: This topic covers light fixture types and placement, emergency lighting, and emergency Power Supply (EPS).
Topic 2	• Designing a Scalable Network Infrastructure: It covers ANSI • TIA-942 cabling hierarchy, network redundancy, structured Cabling System, and planning considerations.
Topic 3	• Equipment Racks: It discusses power rail • strip options, security considerations, and rack standards, properties and selection criteria.
Topic 4	• Cooling Infrastructure: The topic focuses on liquid immersion cooling, supplemental cooling options, sensible and latent heat definitions, and temperature and humidity recommendations.
Topic 5	• Physical Security and Safety: Sub-topics are about physical security considerations and physical safety considerations.

Topic 6	• Electro Magnetic Fields: The topic deals with effects of EMF on human health and equipment (H)EMP, standards, and EMF shielding solutions.
Topic 7	• Water Supply: This topic is all about water supply techniques and application areas.
Topic 8	• Fire Safety • Protection: This topic gives an understanding of standards for fire suppression, detection systems, total flooding fire suppression techniques, and handheld extinguishers. Additionally, it covers Signage and safety.
Topic 9	• Auxiliary Systems: The topic covers water leak detection systems, data centre monitoring requirements, EMS, BMS and DCIM.
Topic 10	• Raised Floor • Suspended Ceiling: The topic discusses applicable standards, signal reference grid, and disability act and regulations.
Topic 11	• Data Centre Location, Building and Construction: It focuses on appropriate sites and components of an effective data centre and supporting facilities setup.

EXIN Certified Data Centre Professional (CDCP) Sample Questions (Q79-Q84):

NEW QUESTION # 79

IP protection grades consist of two numbers.

Which levels of protection do they describe and what is the best protection?

- A. First digit; protections against the ingress of water/fluids. Second digit; protection against ingress of solid objects. The lower the number the better the level of protection.
- **B. First digit; protections against the ingress of solid objects. Second digit; protection against ingress of water/fluids. The higher the number the better the level of protection.**
- C. First digit; protections against the ingress of solid objects. Second digit; protection against ingress of water/fluids. The lower the number the better the level of protection.
- D. First digit; protections against the ingress of water/fluids. Second digit; protection against ingress of solid objects. The higher the number the better the level of protection.

Answer: B

Explanation:

IP protection grades are a way of showing the effectiveness of electrical enclosures in blocking foreign bodies such as dust, moisture, liquids, and accidental contact. IP stands for Ingress Protection or International Protection, and it is defined by the international standard IEC 60529. IP ratings consist of the letters IP followed by two digits and an optional letter. The first digit indicates the level of protection the enclosure provides against access to hazardous parts and the ingress of solid foreign objects. The second digit indicates the level of protection the enclosure provides against the ingress of water or fluids. The higher the number, the better the level of protection. For example, IP65 means the enclosure is dust-tight and can withstand water jets from any direction. IP68 means the enclosure is dust-tight and can be submerged in water under specified conditions.

NEW QUESTION # 80

Sprinkler heads used in computer rooms activate at what temperature?

- **A. 57 °C (135 °F)**
- B. 27 °C (81 °F)
- C. 70 °C (158 °F)
- D. Only on direct contact with a flame

Answer: A

Explanation:

Sprinkler heads used in computer rooms activate at 57 °C (135 °F), which is the standard temperature rating for ordinary sprinklers. This is the temperature at which the heat-sensitive element of the sprinkler head, such as a glass bulb or a fusible link, breaks or melts, allowing water to flow from the sprinkler. Sprinkler heads are designed to activate only when exposed to a fire, not to ambient temperature fluctuations. Therefore, sprinkler heads should be installed at a sufficient distance from the heat sources, such as servers, racks, or ducts, to avoid accidental activation. Sprinkler heads should also be selected and installed in accordance with the relevant standards and codes, such as NFPA 13 and NFPA 75.

NEW QUESTION # 81

Where should exit/emergency signs be located?

- A. In the Computer room only
- B. Depends on the policy of the data centre
- C. At every escape door and pathways leading to doors (arrows)
- D. At each door

Answer: C

Explanation:

According to the EPI Data Centre Operations Standard (DCOS), exit/emergency signs should be located at every escape door and pathways leading to doors (arrows) to ensure a safe and quick evacuation in case of an emergency1. This is also consistent with the best practices for data centre emergency preparedness and response, which recommend having a clear and visible signage system for emergency exits23.

NEW QUESTION # 82

Which type of Fire Detection Device is recommended for protecting a Data Center?

- A. Heat detector
- B. Flame detector
- C. None of the above
- D. Smoke detector

Answer: D

Explanation:

According to the CDCP® Preparation Guide, smoke detectors are the most common type of fire detection devices used in data centers, as they can detect a fire in its early stages and provide early warning to the occupants and authorities. Smoke detectors can be either spot-type or air-aspirating, depending on the design and goals of the data center. Spot-type detectors are inexpensive and simple, but may cause activation delay and false alarms. Air-aspirating detectors are more sensitive and reliable, but may require more maintenance and installation costs. Both types of detectors should be installed in accordance with the relevant standards and codes, such as NFPA 72 and EN 54.

References: CDCP® Preparation Guide, page 30-31. Evaluating Fire Detection Options For Data Centers. Fire Detection and Suppression Systems in a Data Center.

NEW QUESTION # 83

What is the effect of a high relative humidity in the data centre?

- A. There is a risk of not properly functioning of the smoke detectors.
- B. There is a risk of corrosion.
- C. In a data centre environment relative humidity is not important, only temperature matters.
- D. There is a risk of electrostatic discharge.

Answer: B

Explanation:

High relative humidity in a data center can lead to corrosion of metal parts and electronic contacts, potentially causing failures. Electrostatic discharge is a risk with low humidity, not high.
