SAP Certified Associate - SAP SuccessFactors People Analytics: Reporting C-THR92-2505 Prüfungsfragen mit Lösungen (Q38-Q43):

38. Frage

What setting in Provisioning enables Live data source?

- A. LMS Client API
- **B. Platform Client**
- C. Workforce Analytics Client
- D. EC Client

Antwort: B

Begründung:

- * Enabling Live Data Source
- * The Platform Client setting in Provisioning is required to enable the Live data source, which allows real-time data retrieval for reports.
- * Why Other Options are Incorrect
- * B (EC Client): Pertains to Employee Central but does not enable live data.
- * C (Workforce Analytics Client): Relates to Workforce Analytics, not live data.
- * D (LMS Client API): Specific to Learning Management System data integration.

39. Frage

User A creates a dashboard with four tiles. When User B accesses the dashboard, only three tiles are visible. Why can User B see only three tiles?

- **A. User B does NOT have run permission to the domain the fourth tile is based upon.**
- B. User B has NOT been assigned ownership of the fourth tile.
- C. User B has NOT been assigned permission to see the fourth tile.
- D. The fourth tile has NOT been shared.

Antwort: A

Begründung:

- * Cause of the Issue:
- * Tiles are linked to specific domains. If a user does not have Run Report Permission for the domain that a tile is based on, they will not be able to view the tile.
- * Resolution:
- * Check User B's role-based permissions (RBP) for the domain linked to the fourth tile.
- * Ensure that the Run Report Permission is granted for the respective domain.

40. Frage

A user wants to build a pivot chart based on a list report that has a run-time filter. What must the user do?

- A. Create a filter group within the run-time filter before building the report.

- B. Create the run-time filter before building the report.
- C. Create the pivot chart before adding the run-time filter.
- **D. Create the pivot chart after adding the run-time filter.**

Antwort: D

Begründung:

* Pivot Chart Creation Process

* To build a pivot chart based on a list report with a run-time filter, the filter must first be added to ensure the data being visualized reflects the selected filter criteria.

* Explanation of Correct Answer

* A pivot chart dynamically organizes and summarizes data. Adding the run-time filter beforehand ensures the chart is based on the filtered dataset.

* Creating the chart after applying the filter allows for a more accurate representation of the desired data.

* Why Other Options are Incorrect

* A: Filter groups are unrelated to this scenario.

* B: Creating the chart before the filter would lead to inaccurate results.

* C: While adding the filter first is correct, the chart must be created after this step.

41. Frage

The data source used by the two tables only displays current (active) employees. How would you configure a filter on the table End of Previous Year Headcount by Location to display data accurately?

Note: There are 2 correct answers to this question.

- A. Set the Range type to Standard.
- **B. Set a filter on Hire Date (Range).**
- **C. Set the Range type to Offset.**
- D. Set a filter on Hire Date (Member).

Antwort: B,C

Begründung:

* Understanding the Problem

* The data source displays only current (active) employees, so the table must filter records to show headcount at the end of the previous year.

* Explanation of Correct Answers

* B (Hire Date Range): Applying a range filter on the hire date ensures only employees who were active within the required timeframe are included.

* D (Offset Range Type): Using an offset type range adjusts the filter dynamically to capture the relevant period for the previous year.

* Why Other Options are Incorrect

* A (Standard Range Type): Does not allow for dynamic date adjustments.

* C (Hire Date Member): Members are static and not suited for dynamic date filtering.

42. Frage

When you use a column of type text as a measure in a pivot query, which of the following pivot functions are available? Note: There are 2 correct answers to this question.

- A. Sum
- **B. Concatenate**
- C. Max
- **D. Distinct Count**

Antwort: B,D

* This function counts the number of unique entries in the text column.
