

적중율 좋은 SK0-005퍼펙트최신버전덤프덤프로 CompTIA Server+ Certification Exam 시험패스

그 외, Fast2test SK0-005 시험 문제집 일부가 지금은 무료입니다: <https://drive.google.com/open?id=1YwEaM61T83z7zRZf5MljNAeLfclpEQU->

Fast2test는 IT인증자격증을 취득하려는 IT업계 인사들의 검증으로 크나큰 인지도를 가지게 되었습니다. 믿고 애용 해주신 분들께 감사의 인사를 드립니다. CompTIA SK0-005덤프도 다른 과목 덤프자료처럼 적중율 좋고 통과율이 장난이 아닙니다. 덤프를 구매하시면 퍼펙트한 구매후 서비스까지 제공해드려 고객님의 보유한 덤프가 항상 시장에서 가장 최신버전임을 약속해드립니다. CompTIA SK0-005덤프만 구매하신다면 자격증 취득이 쉬워져 고객님의 밝은 미래를 예약한것과 같습니다.

CompTIA SK0-005 시험은 서버 관리에 대한 지식과 기술을 검증하고자 하는 IT 전문가들을 위해 설계된 인증 시험입니다. 이 시험은 매일 서버 작업을 수행하며 서버 하드웨어, 소프트웨어 및 보안을 관리 및 유지하고자 하는 개인에게 이상적입니다. SK0-005 시험 통과는 전 세계적으로 인정되며 IT 전문가의 이력서에 가치 있는 자격증으로 인정됩니다.

이 시험은 후보자의 실제 기술과 서버 관리에 대한 지식을 테스트하도록 설계되었습니다. 후보자는 시험을 시도하기 전에 서버 관리에 대한 18-24 개월 이상의 경험을 가지고있는 것이 좋습니다. 또한 응시자는 온라인 과정을 수강하거나 교육 세션에 참석하거나 CompTIA가 제공하는 관련 자료를 연구하여 시험을 준비 할 수 있습니다.

SK0-005퍼펙트 최신버전 덤프 덤프 최신 업데이트버전

Fast2test는 여러분의 꿈을 이루어줄 뿐만 아니라 일년무료 업뎃서비스도 따릅니다. Fast2test에서 제공하는 덤프로 여러분은 1000%시험을 패스하실 수 있고 CompTIA SK0-005자격증을 취득하실 수 있습니다. 지금 바로 사이트에서 CompTIA SK0-005덤프데모 즉 덤프의 일부 문제와 답을 다운 받으셔서 체험하실 수 있습니다.

CompTIA SK0-005 시험은 서버, 네트워크, 운영 체제 산업에서 최신 제품과 트렌드를 다룹니다. 이 시험은 후보자의 서버 구성, 유지 보수 및 배포 역량을 측정합니다. 이 시험은 Windows, Linux 및 기타 서버 환경을 포함한 다양한 서버를 설치, 구성 및 유지 보수하기 위해 필요한 기술 전문성을 시험합니다.

최신 CompTIA Server+ SK0-005 무료샘플문제 (Q10-Q15):

질문 # 10

A technician is working on a Linux server and is trying to access another server over the network. The technician gets server not found message when trying to execute ping servername but no error messages when using ping servername. Domain.com. Which of the following should the technician do to resolve the error?

- A. Configure the domain search variable
- B. Configure the DNS address
- C. Modify nsswitch. Conf.
- D. Change the permissions on resolv. conf

정답: A

설명:

The domain search variable is used to specify a list of domains that are appended to a hostname when resolving it. If the servername is not fully qualified, the resolver will try each domain in the list until it finds a match or fails. By configuring the domain search variable, the technician can avoid typing the full domain name every time they want to ping a server. Verified Reference: [How to configure DNS suffixes on Linux systems]

질문 # 11

An administrator reviews a new server that was received from a vendor and notes the OS has been installed to a two-drive array configured with RAID 0. Which of the following best describes what will happen if a drive in that array fails?

- A. The server will gracefully shut down.
- B. The server will operate but in read-only mode.
- C. The server will continue to operate normally.
- D. The server will immediately crash.

정답: D

설명:

RAID 0 is a configuration that splits data evenly across two or more disks without parity or mirroring. This improves performance but offers no fault tolerance. If a drive in a RAID 0 array fails, the data on the array becomes inaccessible and the server will immediately crash. The other options are not applicable to RAID 0. Reference: [CompTIA Server+ Certification Exam Objectives], Domain 3.0: Storage, Objective 3.2: Given a scenario, configure RAID using best practices.

질문 # 12

Which of the following licensing models allows the greatest number of concurrent Windows VMS to run on a host for the lowest cost?

- A. Per instance
- B. per core
- C. Per concurrent user
- D. per user

정답: D

설명:

Explanation

The answer to this question may depend on several factors, such as the number and type of Windows VMs, the number and type of

host machines, the number and type of users, and the specific licensing terms and conditions of each licensing model. However, based on the information available from the web search results, one possible answer is per user.

Per user licensing model is a licensing model that allows a user to access Windows VMs from any device, regardless of the number of devices or VMs. Per user licensing model is available for Windows 10 Enterprise E3/E5, Windows VDA E3/E5, and Microsoft 365 F3/E3/E5. Per user licensing model may offer the greatest number of concurrent Windows VMs to run on a host for the lowest cost if the following conditions are met:

The user needs to access multiple Windows VMs from different devices, such as desktops, laptops, tablets, or smartphones.

The user needs to access Windows VMs that run different versions or editions of Windows, such as Windows 10 Enterprise, Windows 10 Pro, or Windows 7 Enterprise.

The user needs to access Windows VMs that run on different types of host machines, such as physical servers, virtual servers, or cloud servers.

The user does not need to access Windows VMs that run on dedicated hardware or have specific performance or security requirements.

According to the web search results 1, per user licensing model costs \$84 per user per year for Windows 10 Enterprise E3, \$168 per user per year for Windows 10 Enterprise E5, \$100.80 per user per year for Windows VDA E3, and \$196.80 per user per year for Windows VDA E5. These prices are based on the Open License Program and may vary depending on the volume and agreement level²

Per core licensing model is a licensing model that requires a license for each core of the processor on the host machine that runs Windows VMs. Per core licensing model is available for Windows Server 2022 Datacenter and Standard editions. Per core licensing model may offer a lower cost than per user licensing model if the following conditions are met:

The host machine has a low number of cores or a high core density.

The host machine runs a high number of Windows VMs with low resource consumption.

The host machine runs only Windows Server VMs with the same edition as the host machine.

According to the web search results 2, per core licensing model costs \$6,155 for 16 core licenses for Windows Server 2022 Datacenter edition and \$1,069 for 16 core licenses for Windows Server 2022 Standard edition.

These prices are suggested retail prices and may vary depending on the reseller²

Per instance licensing model is a licensing model that requires a license for each instance of Windows that runs on a host machine or a VM. Per instance licensing model is available for Windows Server 2022 Essentials edition and some older versions of Windows Server. Per instance licensing model may offer a lower cost than per user or per core licensing model if the following conditions are met:

The host machine runs only one instance of Windows Server with low resource consumption.

The host machine does not need to run any other VMs or applications.

The host machine does not need any advanced features or functions that are available in Datacenter or Standard editions.

According to the web search results 2, per instance licensing model costs \$501 for one server license for Windows Server 2022 Essentials edition. This price is suggested retail price and may vary depending on the reseller²

Per concurrent user licensing model is a licensing model that allows a certain number of users to access Windows VMs at the same time, regardless of the number of devices or VMs. Per concurrent user licensing model is not available for any current version of Windows or Windows Server. Per concurrent user licensing model was available for some older versions of Windows Server Terminal Services or Remote Desktop Services, but it was discontinued due to complexity and compliance issues. Therefore, per concurrent user licensing model cannot be used for running Windows VMs on a host.

질문 # 13

A technician needs to restore data from a backup. The technician has these files in the backup inventory:

Name	Size
01012020.bak	100MB
01022020.bak	10MB
01032020.bak	5MB
01042020.bak	7MB
01052020.bak	120MB
01062020.bak	8MB
01072020.bak	10MB

Which of the following backup types is being used if the file 01062020.bak requires another file to restore data?

- A. Snapshot
- B. Full
- C. Incremental
- D. Differential

정답: C

설명:

An incremental backup only backs up files that have changed since the last backup, whether it was a full or an incremental backup. Therefore, an incremental backup file may require another file to restore data, depending on the sequence of backups. A full backup backs up all files and does not require any other file to restore data. A snapshot is a point-in-time copy of data that does not depend on other files. A differential backup backs up files that have changed since the last full backup and does not require any other file to restore data.

질문 # 14

A technician is attempting to reboot a remote physical Linux server. However, attempts to command a shutdown -----now result in the loss of the SSH connection. The server still responds to pings. Which of the following should the technician use to command a remote shutdown?

- A. A KVM
- B. virtual serial console
- C. A crash cart
- D. An IDRAC

정답: D

설명:

Explanation

An IDRAC (Integrated Dell Remote Access Controller) is a tool that can be used to command a remote shutdown of a physical Linux server. An IDRAC is a hardware device that provides out-of-band management for Dell servers. It allows the technician to access the server's console, power cycle, reboot, or shut down the server remotely using a web interface or a command-line interface. An IDRAC does not depend on the operating system or network connectivity of the server. A virtual serial console is a tool that can be used to access a remote virtual machine's console using a serial port connection. A KVM (Keyboard, Video, Mouse) switch is a device that allows the technician to switch between different computer sources using the same keyboard, monitor, and mouse. A crash cart is a mobile unit that contains a keyboard, monitor, mouse, and other tools that can be connected to a physical server for troubleshooting purposes. References:
