2V0-17.25 Reliable Exam Tips - 2V0-17.25 Valid Test Camp

Issues		Troubleshooting Steps
Host in Isolation Response	Host in Isolation Response	Examine NIC teaming and load balancing configuration
Host in Failover State	Host in Failover State	Verify the port group settings and VLAN configuration
Host in Unreachable State	Host in Unreachable State	Check physical network cables and switch port status

6. DRAG DROP

Put the following steps in the correct order to update the driver/firmware in vSAN.

Verify that the new driver and firmware versions are active and the host is functioning correctly.	Step 1
Download the latest driver and firmware from the hardware vendor's website.	Step 2
Apply the firmware update to the host using the vendor's update tool.	Step 3
Plan for a maintenance window to perform the update.	Step 4
Check the current driver and firmware versions using the vSphere Client.	Step 5
Reboot the host to complete the update process.	Step 6
Update the driver using the vSphere Lifecycle Manager (vLCM)	Step 7

Answer:

BTW, DOWNLOAD part of ITExamDownload 2V0-17.25 dumps from Cloud Storage: https://drive.google.com/open?id=1m4gwb3l4z0xRoHwHqZ83WyQqUQp78dQU

Because they are immensely useful and help you gain success in a 2V0-17.25 certification exam. More than ever, the professionals are now facing a highly competitive world to get their talent recognized enhancing their positions in their work environment. Such a milieu demands them to enrich their candidature more seriously. So the professionals work hard to maintain their quality and never fail in doing so. ITExamDownload 2V0-17.25 Certification exams are the best option for any ambitious and ardent professional to make his continuation in his area of work intact.

VMware 2V0-17.25 Exam Syllabus Topics:

Topic	Details

	• Deploy, Configure, and Operate VMware Cloud Foundation (VCF): This section of the exam measures the skills of VCF Administrators and goes in-depth into deploying, configuring, and managing VMware Cloud Foundation. The deployment portion covers identifying deployment models, configuring private cloud environments, and setting up workload domains and networking. The management objectives focus on lifecycle operations such as fleet management, identity and role-based access, licensing, certificate handling, and importing existing vCenters. Operations are assessed through capabilities like monitoring health, logs, networks, and storage, along with creating dashboards, configuring alerts, and ensuring compliance. The automation portion evaluates skills in using VCF Automation for multi-tenancy, provider networking, content libraries, governance policies, and extensibility to automate business processes. It also includes knowledge of deploying Supervisor-based services within Cloud Foundation.
Topic 1	
Topic 2	• Plan and Design the VMware by Broadcom Solution: This section of the exam measures the skills of Solution Designers and emphasizes the ability to plan and design VMware by Broadcom solutions. Although no testable objectives are defined here, it reinforces the importance of architectural planning and design considerations for large-scale cloud deployments.
Topic 3	• VMware Cloud Foundation Fundamentals: This section of the exam measures the skills of Private Cloud Engineers and covers the basic building blocks of VMware Cloud Foundation. It includes the vision and use cases for private cloud, along with the value it provides to businesses. Candidates are expected to understand compute fundamentals such as deploying and managing vCenter, ESXi, clusters, and virtual machines. Storage fundamentals include configuring vSphere storage, setting up vSAN clusters, applying storage policies, and understanding resilience options. Networking fundamentals are also assessed, with a focus on configuring connectivity, fabrics, routing, and network services in a VMware environment.
Topic 4	• IT Architectures, Technologies, Standards: This section of the exam measures the skills of Cloud Architects and focuses on understanding the broader context of IT architectures, common technologies, and industry standards. While it does not have testable objectives, it sets the foundation for how VMware Cloud Foundation aligns with enterprise cloud strategies.

Valid 2V0-17.25 pdf vce & VMware 2V0-17.25 test answers & 2V0-17.25 troytec exams

2V0-17.25 practice materials are typically seen as the tools of reviving, practicing and remembering necessary exam questions for the exam, spending much time on them you may improve the chance of winning. However, our 2V0-17.25 training materials can offer better condition than traditional practice materials and can be used effectively. We treat it as our major responsibility to offer help so our 2V0-17.25 Practice Guide can provide so much help, the most typical one is their efficiency.

VMware Cloud Foundation 9.0 Administrator Sample Questions (Q96-Q101):

NEW QUESTION # 96
An administrator is responsible for managing a VMware Cloud Foundation (VCF) fleet. The administrator has been tasked with the following:
- Ensure that newly deployed Virtual Machines create a DNS A and DNS PTR Record in DNS.
- Create the DNS records before each Virtual Machine is deployed.
- If a deployment fails, ensure that the created DNS record is deleted.
- Only remove the DNS records for each Virtual Machine after it is destroyed.
- Every workflow must be allowed to complete before starting any additional workflow for the same event topic.
The administrator has already completed the following tasks:
-Created two VCF Operations Orchestrator Workflows with corresponding Event Subscriptions:
- Create DNS Records
- Delete DNS Records
- Created a new blueprint to deploy a Virtual Machine:

- Added two string inputs, hostnameand domainName
- Added hostname:'$ {input.hostname}'as a custom property of the Virtual Machine resource.
- Added domainName: '$ {input.domainName}' as a custom property of the Virtual Machine resource.
What must the administrator configure within the Event subscription to ensure that the DNS record is only created when the domain name is provided?

- A. Add the event.data.customProperties ['domainName'] ! = nullcondition to the Add DNS Records and Delete DNS Records subscriptions.
- B. Add the event.data.customProperties ['hostname'] ! = nullcondition to the Add DNS Records and Delete DNS Records subscriptions.
- C. Enable the Block execution of events in topic option in the Add DNS Records and Delete DNS Records subscriptions.
- D. Add the Delete DNS Records workflow as the Recovery Workflow of the Add DNS Records subscription.

Answer: A

Explanation:
Configuring a condition that checks for the presence of the domainName custom property ensures that the event subscription only triggers when a domain name is provided. This guarantees that DNS record creation and deletion workflows run exclusively for virtual machines where the required domain information exists.

NEW QUESTION # 97
An administrator is preparing to create a new workload domain within an existing VCF instance. Which two tasks must be completed before starting the deployment workflow? (Choose two.)

- A. Pre-install a supported ESX version onto the server using a valid ISO image.
- B. Pre-install a supported ESX version onto the server with VCF Installer.
- C. Commission the new ESX hosts into the existing VCF instance from the new workload domain vCenter.
- D. Commission the new ESX hosts into the existing VCF instance from the management domain vCenter.
- E. Commission the new ESX hosts into the existing VCF instance from VCF Installer.

Answer: A,D

Explanation:
The VCF 9.0 Deployment Guide notes: "All ESXi hosts must be installed with a supported ESXi version using a VMware ISO before they are commissioned into SDDC Manager. Commissioning is always performed via the management domain vCenter." The new workload domain vCenter does not exist until the domain is deployed, ruling out option A. The VCF Installer is used for initial bring-up, not workload domain expansion (E). Therefore, the two required steps are: install ESXi using a valid ISO (D) and commission hosts via the management domain vCenter (B).

NEW QUESTION # 98
An administrator is responsible for managing a VMware Cloud Foundation (VCF)-based private cloud. The private cloud consists of a single organization with two projects, appdev and production.
The administrator has been tasked with ensuring that the following are standardized across all existing and new blueprints within the production project:
Inputs: size, os, location
Constants: salt master id
Which three actions should the administrator take to meet the objective? (Choose three.)

- A. Update all existing blueprints within the appdev project with the new Property Group(s).
- B. Create a new Property Group containing all required properties for the production project.
- C. Create a new Property Group containing all constant properties for the production project.
- D. Create a new Property Group containing all input properties for the production project.
- E. Update all existing blueprints within the production project with the new Property Group(s).
- F. Update all blueprints within the organization to use the same locally configured inputs.

Answer: C,D,E

Explanation:
The VCF 9.0 Automation Guide details the use of Property Groups to standardize blueprint inputs and constants across projects.

Property Groups allow administrators to define sets of inputs (like size, os, location) and constants (like salt master id) centrally, ensuring consistency across deployments.

The correct actions are:

Create a new Property Group for input properties (C) to capture the standard inputs (size, os, location).

Create a new Property Group for constant properties (E) to include items like the salt master id.

Update all existing blueprints in the production project with the new Property Groups (F) to enforce standardization across new and existing workloads.

Options A and B are incorrect because changes are not required in the appdev project or across the entire organization-only the production project. Option D is redundant since inputs and constants should be separated into distinct groups.

NEW QUESTION # 99

An administrator has been tasked with creating a real-time view of key performance indicators for their VMware Cloud Foundation private cloud and an automated monthly report that shows the capacity consumed by each development team who use the environment. Which VCF component should the administrator configure to complete their objectives?

- A. VMware Aria Operations for Networks
- B. VMware Aria Operations
- C. VMware Aria Operations for Applications
- D. VMware Aria Operations for Logs

Answer: B

Explanation:

VMware Aria Operations provides comprehensive monitoring, analytics, and performance management for the entire VMware Cloud Foundation environment. It enables real-time views of key performance indicators (KPIs) and can be configured to generate automated reports on capacity consumption, which aligns with the administrator's objectives.

NEW QUESTION # 100

An organization has a mix of internally developed commercially packaged and open-source applications within their VMware Cloud Foundation (VCF) environment. Management has requested a plan to monitor these applications in a simple, consolidated manner. What two VCF solutions could be implemented to satisfy this request? (Choose two.)

- A. VCF Operations for Applications
- B. VCF Operations Application Discovery
- C. VCF Operations Service Discovery
- D. VCF Operations for Logs Content Packs
- E. VCF Operations for Logs

Answer: D,E

Explanation:

In VMware Cloud Foundation 9.0, the strategy for monitoring diverse application types (internal, commercial, and open-source) in a consolidated manner relies heavily on the ingestion and analysis of log data.

According to the VCF 9.0 Operations and Monitoring Guide:

VCF Operations for Logs (D): This is the core platform (formerly VMware Aria Operations for Logs) used for real-time log management. It provides a centralized location to collect logs from any source-be it a custom-coded internal app, a commercial database, or an open-source web server. This satisfy the "consolidated manner" requirement by aggregating disparate data streams into a single searchable interface.

VCF Operations for Logs Content Packs (E): To provide "simple" monitoring for commercial and open-source applications without manual configuration, VCF utilizes Content Packs. These packs contain pre-defined dashboards, extracted fields, and alerts tailored for specific applications (e.g., Apache, Microsoft SQL Server, Linux, etc.). By using Content Packs, an administrator can immediately gain deep visibility into the health and performance of diverse applications without building custom monitoring logic.

Why other options are incorrect:

VCF Operations Service/Application Discovery (A & C): These features are used to map relationships between virtual machines and services to understand dependencies. While they help identify what is running, they do not provide the deep "monitoring" (log analysis and alerting) requested for a mix of internal and open-source apps.

VCF Operations for Applications (B): This usually refers to high-frequency metrics and trace analysis (formerly Tanzu Observability/Wavefront). While powerful, it is often more complex to implement across a standard VCF fleet compared to the "simple, consolidated" log-based approach provided by VCF Operations for Logs and its associated Content Packs.

Reference:
VMware Cloud Foundation 9.0 Administration Guide: Using VCF Operations for Logs to Monitor Applications.
VCF Operations for Logs 9.0 User Guide: Installing and Configuring Content Packs for Application Visibility.
