

New Exam C-BCBTP-2502 Fee | Professional C-BCBTP-2502: SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite 100% Pass

P.S. Free & New C-BCBTP-2502 dumps are available on Google Drive shared by Actual4Cert: <https://drive.google.com/open?id=1BFutqumhFbvZXksVQk3OdNadaMT5zCd8>

When choosing our C-BCBTP-2502 practice materials, we offer a whole package of both practice materials and considerate services. We provide our time-saved, high efficient C-BCBTP-2502 actual exam containing both functions into one. There is a whole profession of experts who work out the details of our C-BCBTP-2502 Study Guide. So all points of questions are wholly based on the real exam and we won the acclaim from all over the world.

SAP C-BCBTP-2502 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Illustrating CIO Transformation Delivered by SAP Business Suite: This section of the exam evaluates the skills of IT Transformation Managers and covers the role of SAP Business Suite in delivering value for CIO-led digital transformation. It highlights the significance of SAP's portfolio in enterprise IT, introduces the capabilities of SAP BTP, and shows how it connects with end-to-end processes and industry-specific use cases. Candidates should also be able to identify the key products within SAP BTP and explain how cross-portfolio components integrate to deliver measurable value.
Topic 2	<ul style="list-style-type: none">• Discovering SAP Business Technology Platform: This section of the exam measures the skills of SAP Solution Architects and focuses on positioning the SAP Business Technology Platform within the overall SAP Business Suite strategy. It includes understanding the platform's role in enabling transformation, aligning with enterprise strategy, and supporting digital innovation. Candidates are expected to recognize the relevance of SAP BTP in modern business processes and how it integrates with other SAP offerings.

C-BCBTP-2502 Valid Exam Test | Reliable C-BCBTP-2502 Exam Prep

There are a lot of advantages of our APP online version. On one hand, the online version of our C-BCBTP-2502 exam questions can apply in all kinds of the electronic devices. In addition, the online version of our C-BCBTP-2502 training materials can work in an offline state. If you buy our products, you have the chance to use our study materials for preparing your exam when you are in an offline state. We believe that you will like the online version of our C-BCBTP-2502 Exam Questions.

SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite Sample Questions (Q23-Q28):

NEW QUESTION # 23

How does SAP BTP enable businesses to extend their existing SAP applications?

- A. By providing low-code/no-code development tools.
- B. By requiring all applications to be developed from scratch.
- C. By restricting integration with external systems.
- D. By limiting customization to SAP standard functionalities.

Answer: A

Explanation:

A fundamental principle of modernizing the SAP ecosystem is the concept of a "Clean Core." SAP BTP enables this by allowing organizations to build extensions "side-by-side" rather than within the core ERP code (classic "in-app" customization). By providing low-code/no-code development tools, such as SAP Build, the platform empowers both professional developers and "citizen developers" (business users with limited coding knowledge) to create applications that add specific business value without compromising the stability or upgradeability of the core SAP S/4HANA system.

These tools allow for the rapid creation of user interfaces using SAP Fiori elements and the automation of manual tasks through visual drag-and-drop interfaces. This approach is a stark contrast to traditional development, which often required extensive, custom ABAP coding that made system upgrades difficult and expensive. By positioning BTP as the extension layer, SAP ensures that businesses can remain agile and respond quickly to market changes. This flexibility is supported by a robust set of services that facilitate secure communication between the extension and the core system via APIs. Consequently, businesses can innovate at the edge while maintaining a stable, standardized digital core, which is the hallmark of the SAP Business Suite's evolution into the cloud era.

NEW QUESTION # 24

How does SAP BTP support hybrid cloud strategies?

- A. By eliminating the need for cloud-based analytics.
- B. By restricting enterprises to a single cloud vendor.
- C. By enforcing cloud-only solutions without on-premise support.
- D. By allowing seamless integration between on-premise and cloud systems.

Answer: D

Explanation:

Most large enterprises do not operate solely in the cloud; they maintain a "hybrid" environment consisting of legacy on-premise systems (like SAP ERP 6.0) and modern cloud applications (like SAP S/4HANA Cloud).

SAP BTP supports hybrid cloud strategies by acting as the bridge between these two worlds. Through the SAP Connectivity Service and the Cloud Connector, BTP establishes a secure, encrypted tunnel that allows cloud-based services to access on-premise data and processes without requiring complex VPN setups or opening vulnerable firewall ports.

This capability is essential for businesses that are mid-transition in their digital transformation journey. It allows them to keep their core "system of record" on-premise for compliance or technical reasons while still taking advantage of cloud-native innovations on BTP, such as advanced analytics, AI, and mobile extensions.

By positioning BTP as a hybrid-ready platform, SAP ensures that customers can modernize at their own pace.

This "side-by-side" extensibility model ensures that the on-premise core remains clean and stable, while the cloud layer provides the agility needed to respond to market changes. This flexibility is a cornerstone of the SAP Business Suite's value proposition, offering a path to the cloud that respects the existing investments of the enterprise.

NEW QUESTION # 25

Which SAP BTP product is critical for financial forecasting and analytics?

- A. SAP HANA Cloud
- B. SAP Business Network
- C. SAP Fieldglass
- D. SAP Ariba

Answer: A

Explanation:

For financial forecasting to be effective, it requires the ability to process massive amounts of historical and real-time data with extreme speed. SAP HANA Cloud is the critical foundational product on SAP BTP that enables this. As a cloud-native, in-memory database, it allows for the convergence of transactional (OLTP) and analytical (OLAP) processing. This means that finance teams can run complex forecasting models directly on live transactional data without the need for time-consuming data transfers to separate data warehouses.

In the context of the SAP Business Suite, SAP HANA Cloud acts as the "single source of truth." It provides the high-performance data engine required by tools like SAP Analytics Cloud to perform predictive modeling and "what-if" simulations. Whether a company is predicting cash flow, modeling market volatility, or performing year-end consolidations, HANA Cloud ensures that the underlying data is accessible and processed in sub-seconds. This capability is essential for modern finance departments that must move from descriptive analytics (what happened) to predictive and prescriptive analytics (what will happen and what should we do). While Ariba and Fieldglass provide the source data for procurement and contingent labor, it is SAP HANA Cloud that provides the computational power necessary to turn that data into strategic financial insights.

NEW QUESTION # 26

Which SAP BTP solution can be used to streamline handling of blocked sales orders?

- A. SAP Integration Suite
- **B. SAP Build Process Automation**
- C. SAP Datasphere
- D. SAP Analytics Cloud

Answer: B

Explanation:

Blocked sales orders often represent a significant bottleneck in the "Order-to-Cash" process, usually requiring manual intervention from credit managers or sales administrators. SAP Build Process Automation is the ideal BTP solution to streamline this task. It combines the capabilities of workflow management and Robotic Process Automation (RPA) to automate the evaluation and release (or escalation) of these orders based on predefined business rules and real-time data from SAP S/4HANA.

By positioning SAP Build Process Automation as the solution, businesses can implement "exception-based" management. Instead of a human reviewing every blocked order, the BTP service can automatically release orders that meet certain low-risk criteria or route high-value/high-risk blocks to the appropriate manager's mobile device for instant approval. This significantly reduces the "Day Sales Outstanding" (DSO) and improves customer satisfaction by accelerating fulfillment. This approach highlights the value of SAP BTP as an extension layer for the SAP Business Suite; it allows for the optimization of core ERP processes without the need for complex, custom ABAP development, maintaining a "clean core" while achieving high levels of operational efficiency.

NEW QUESTION # 27

Why is SAP BTP considered a strategic platform for digital transformation?

- **A. It centralizes integration, automation, and data-driven decision-making.**
- B. It eliminates the need for external data management solutions.
- C. It allows enterprises to move all workloads to SAP on-premise solutions.
- D. It provides a one-size-fits-all solution without customization options.

Answer: A

Explanation:

SAP BTP is the strategic foundation for the "Intelligent, Sustainable Enterprise." Its primary value lies in its ability to centralize integration, automation, and data-driven decision-making into a single, unified platform. In a modern IT landscape, data is often fragmented across multiple cloud and on-premise systems.

BTP acts as the unified technical layer that breaks down these silos. By providing a common set of services for data management (SAP HANA Cloud), analytics (SAP Analytics Cloud), and integration (SAP Integration Suite), BTP ensures that business leaders have a holistic view of their operations.

Digital transformation requires more than just moving to the cloud; it requires the ability to innovate quickly.

BTP's strategic positioning allows businesses to extend their core SAP applications (like S/4HANA) using side-by-side extensions. This keeps the "core" clean and stable while allowing for rapid innovation at the edge. Furthermore, the platform's automation capabilities (like SAP Build Process Automation) enable companies to optimize their workflows, reducing manual effort and
