問題 #128
An administrator is trying to terminate a process that is not responding. Which of the following commands should the administrator use in order to force the termination of the process?

- A. kill -1 PID
- B. kill -15 PID
- C. kill PID
- D. kill -9 PID

答案：D

解題說明：
Comprehensive and Detailed Explanation From Exact Extract:
The kill command is used to send signals to processes. The -9 option sends the SIGKILL signal, which immediately terminates the process and cannot be caught or ignored by the process. This is used as a last resort when a process is not responding to the default (SIGTERM, -15) or other signals. The SIGKILL signal guarantees termination.
Other options:
* A. Default kill sends SIGTERM (-15), which requests a graceful shutdown but can be ignored.
* B. -1 sends SIGHUP, used to reload configuration, not terminate.
* D. -15 sends SIGTERM, not guaranteed to kill an unresponsive process.

問題 #129
A Linux administrator is creating a symbolic link /home/docsleading to the
/usr/share/documents/directory. Which of the following commands allows the administrator to achieve this goal?

- A. lsof /usr/share/documents /home/docs
- B. link /usr/share/documents /home/docs
- C. rsync /usr/share/documents /home/docs
- D. ln -s /usr/share/documents /home/docs

答案：D

解題說明：
This command creates a symbolic link at the specified path that points to the target directory, allowing access to the target through the new link location.

問題 #130
In the echo "profile-$num-$name"line of a shell script, the variable $numseems to not be expanding during execution. Which of the following notations ensures the value is expanded?

- A. echo "profile-$(num)-$name"
- B. echo "profile-'Snum'-$name"
- C. echo 'profile-$num-$name'
- D. echo "profile-${num}-$name"

答案：D

解題說明：
Using ${num} ensures correct variable expansion, especially when variables are adjacent to other characters or hyphens. This prevents ambiguity and guarantees $num is properly expanded within the string.

問題 #131

A systems administrator is developing a script to copy a file if it exists and return an error if it does not. Given the following incomplete script:

Which of the following statements is missing from the script?

- A. while
  A\B.
  done
- B. for
- C. else

答案：C

解題說明：

An else statement is required to handle the condition when the file does not exist so the script can return the error message instead of attempting the copy operation.

問題 #132

A systems administrator is helping to secure a new web application. During the tests, the administrator obtains the following output to validate the application:

Which of the following explains the validation results?

- A. The certificate was not signed by trusted authority, which was forcefully ignored during the tests.
- B. The certificate uses an outdated algorithm and should be replaced with a more secure one.
- C. The certificate was only issued for one month, is already expired, and needs to be replaced
- D. The certificate is a wildcard certificate that is highly insecure and should never be used.

答案：A

解題說明：

The validation output indicates that the certificate chain could not be verified because the local system does not trust the issuing certificate authority, and the connection proceeded anyway by ignoring the verification failure during testing.
