We make sure that the CompTIA 220-1102 exam questions prices are affordable for everyone. All three ExamsLabs 220-1102 exam practice test questions formats are being offered at the lowest price. Just get benefits from this cheap CompTIA A+ Certification Exam: Core 2 220-1102 Exam Questions price and download it right now.

## CompTIA A+ Certification Exam: Core 2 Sample Questions (Q18-Q23):

### NEW QUESTION # 18

A help desk team lead contacts a systems administrator because the technicians are unable to log in to a Linux server that is used to access tools. When the administrator tries to use remote desktop to log in to the server, the administrator sees the GUI is crashing. Which of the following methods can the administrator use to troubleshoot the server effectively?

- A. MSRA
- B. SSH
- C. VNC
- D. SFTP

**Answer: C**

Explanation:

Explanation

The administrator can use Virtual Network Computing (VNC) to troubleshoot the server effectively. VNC is a graphical desktop sharing system that allows the administrator to remotely control the desktop of a Linux server.

### NEW QUESTION # 19

A company is looking for a solution that provides a backup for all data on the system while providing the lowest impact to the network. Which of the following backup types will the company MOST likely select?

- A. Off-site
- B. Full
- C. Differential
- D. Synthetic

**Answer: D**

Explanation:

A synthetic backup is a backup type that provides a backup for all data on the system while providing the lowest impact to the network. It combines a full backup with one or more incremental backups to create a single backup set, without requiring access to the original data source. Off-site is a backup location, not a backup type. Full and differential are backup types, but they have a higher impact on the network than synthetic. Verified References: <https://www.comptia.org/blog/what-is-a-synthetic-backup>

### NEW QUESTION # 20

A customer recently experienced a power outage at a SOHO. The customer does not think the components are connected properly. A print job continued running for several minutes after the power failed, but the customer was not able to interact with the computer. Once the UPS stopped beeping, all functioning devices also turned off. In case of a future power failure, the customer wants to have the most time available to save cloud documents and shut down the computer without losing any data.

**Answer:**

Explanation:

Explanation:

UPS > Surge protector = Computer, wifi router, cable modem

Surge protector = wallOutlet, printer and scanner

### NEW QUESTION # 21

A user is unable to access a remote server from a corporate desktop computer using the appropriate terminal emulation program. The user contacts the help desk to report the issue. Which of the following clarifying questions would be most effective for the help desk technician to ask the user in order to understand the issue?

- A. Does the program work on another computer?
- B. Did the program ever work?
- C. Is anyone else having this issue?
- D. What is the error message?

**Answer: D**

Explanation:

Explanation

The most effective clarifying question for the help desk technician to ask the user in order to understand the issue is A. What is the error message? This question will help the technician to identify the possible cause and solution of the problem, as the error message will provide specific information about the nature and location of the error, such as the server name, the port number, the protocol, the authentication method, or the network status. The error message will also help the technician to troubleshoot the issue by following the suggested steps or searching for the error code online .

This question is more effective than the other choices because:

B: Does the program work on another computer? is not a very helpful question, as it will not reveal the source of the error or how to fix it. The program may work on another computer for various reasons, such as different network settings, firewall rules, permissions, or software versions. However, this question will not tell the technician what is wrong with the user's computer or the remote server, or what needs to be changed or updated to make the program work.

C: Did the program ever work? is not a very relevant question, as it will not address the current issue or how to resolve it. The program may have worked in the past, but it may have stopped working due to changes in the network configuration, the server

status, the software updates, or the user credentials.

However, this question will not tell the technician what has changed or how to restore the program functionality.

D: Is anyone else having this issue? is not a very useful question, as it will not explain the reason or the solution for the error. The issue may affect only the user, or multiple users, depending on the scope and the impact of the error. However, this question will not tell the technician what is causing the error or how to fix it for the user or the others.

## NEW QUESTION # 22

A systems administrator is creating a new document with a list of the websites that users are allowed to access. Which of the following types of documents is the administrator MOST likely creating?

- A. Standard operating procedure
- B. Acceptable use policy
- C. Incident report
- **D. Access control list**

**Answer: D**

Explanation:

An access control list (ACL) is a list of permissions associated with a system resource (object), such as a website. An ACL specifies which users or system processes are granted access to objects, as well as what operations are allowed on given objects. A systems administrator can create an ACL to define the list of websites that users are allowed to access.

## NEW QUESTION # 23

.....

Furthermore, there are up to 12 months of free real CompTIA 220-1102 exam questions updates available at ExamsLabs. In conclusion, if your goal is to pass the CompTIA 220-1102 exam on your first attempt, the ExamsLabs platform is the ideal choice.
