

NSE5_FNC_AD-7.6 Study Demo | Exam NSE5_FNC_AD-7.6 Details

Through the feedback of many examinees who have used VCEPrep's training program to pass some IT certification exams, it proves that using VCEPrep's products to pass IT certification exams is very easy. Recently, VCEPrep has developed the newest training solutions about the popular Fortinet Certification NSE5_FNC_AD-7.6 Exam, including some pertinent simulation tests that will help you consolidate related knowledge and let you be well ready for Fortinet certification NSE5_FNC_AD-7.6 exam.

We regularly update our valid Fortinet NSE5_FNC_AD-7.6 certification test preparation material to keep them in line with the current Fortinet NSE5_FNC_AD-7.6 exam content and industry standards. Professionals from different countries give us their valuable feedback to refine NSE5_FNC_AD-7.6 Actual Dumps even more.

Fortinet - Updated NSE5_FNC_AD-7.6 Study Demo

Because customer first, service first is our principle of service. If you buy our NSE5_FNC_AD-7.6 study guide, you will find our after sale service is so considerate for you. We are glad to meet your all demands and answer your all question about our NSE5_FNC_AD-7.6 study materials. We can make sure that if you purchase our NSE5_FNC_AD-7.6 Exam Questions, you will have the right to enjoy our perfect after sale service and the high quality products. So do not hesitate and buy our NSE5_FNC_AD-7.6 study guide, we believe you will find surprise from our NSE5_FNC_AD-7.6 exam questions.

Fortinet NSE 5 - FortiNAC-F 7.6 Administrator Sample Questions (Q24-Q29):

NEW QUESTION # 24

Refer to the exhibit. What would FortiNAC-F generate if only one of the security filters is satisfied?

- A. A normal event
- B. A security alarm
- C. A security event
- D. A normal alarm

Answer: A

Explanation:

In FortiNAC-F, Security Triggers are used to identify specific security-related activities based on incoming data such as Syslog messages or SNMP traps from external security devices (like a FortiGate or an IDS). These triggers act as a filtering mechanism to determine if an incoming notification should be escalated from a standard system event to a Security Event.

According to the FortiNAC-F Administrator Guide and relevant training materials for versions 7.2 and 7.4, the Filter Match setting is the critical logic gate for this process. As seen in the exhibit, the "Filter Match" configuration is set to "All". This means that for the Security Trigger named

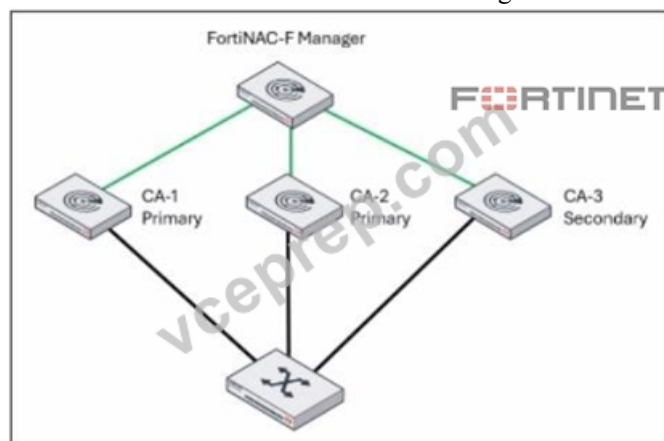

"Infected File Detected" to "fire" and generate a Security Event or a subsequent Security Alarm, every single filter listed in the Security Filters table must be satisfied simultaneously by the incoming data.

In the provided exhibit, there are two filters: one looking for the Vendor "Fortinet" and another looking for the Sub Type "virus". If only one of these filters is satisfied (for example, a message from Fortinet that does not contain the "virus" subtype), the logic for the Security Trigger is not met. Consequently, FortiNAC-F does not escalate the notification. Instead, it processes the incoming data as a Normal Event, which is recorded in the Event Log but does not trigger the automated security response workflows associated with security alarms.

"The Filter Match option defines the logic used when multiple filters are defined. If 'All' is selected, then all filter criteria must be met in order for the trigger to fire and a Security Event to be generated. If the criteria are not met, the incoming data is processed as a normal event. If 'Any' is selected, the trigger fires if at least one of the filters matches."

NEW QUESTION # 25

Refer to the exhibit. A FortiNAC-F N+1 HA configuration is shown.

What will occur if CA-2 fails?

- A. CA-1 and CA-3 will operate as a 1+1 HA cluster with CA-3 acting as a hot standby.

- B. CA-3 will be promoted to a primary and share management responsibilities with CA-1.
- C. CA-3 will continue to operate as a secondary in an N+1 HA configuration.
- D. CA-3 will be promoted to a primary and FortiNAC-F manager will load balance between CA-1 and CA-3.

Answer: D

Explanation:

In an N+1 HA architecture managed by a FortiNAC-F Manager, if a primary CA fails, an available secondary CA is automatically promoted to primary. After CA-2 fails, CA-3 is promoted to a primary role, and the FortiNAC-F Manager load balances management and enforcement responsibilities between the remaining primary CAs, CA-1 and CA-3.

NEW QUESTION # 26

Which two requirements must be met to set up an N+1 HA cluster? (Choose two.)

- A. A FortiNAC-F manager
- B. At least two FortiNAC-F devices designated as primary
- C. A dedicated VLAN for primary and secondary synchronization
- D. A FortiNAC-F device designated as a secondary

Answer: A,D

Explanation:

The N+1 High Availability (HA) architecture was introduced in FortiNAC-F version 7.6 to provide a more scalable and flexible redundancy model compared to the traditional 1+1 active/passive setup.

In an N+1 configuration, a single secondary (standby) appliance can provide coverage for multiple primary (active) Control and Application (CA) appliances.

To set up an N+1 HA cluster, there are two fundamental structural requirements:

A FortiNAC-F Manager (FortiNAC-M): Unlike standard 1+1 HA, which can be configured directly between two CAs, N+1 management is centralized. The FortiNAC-M acts as the orchestrator that manages the failover groups, monitors the health of the primaries, and coordinates the promotion of the secondary server if a primary fails.

A FortiNAC-F device designated as a Secondary: The cluster must have one appliance explicitly configured with the Secondary failover role. This device remains in a standby state, receiving database replications from all N primaries in its group until it is called upon to take over the functions of a failed unit

NEW QUESTION # 27

As part of a FortiNAC-F integration with FortiGate for management of VPN users, what must be configured on FortiGate to keep FortiNAC-F up to date with VPN session information?

- A. RADIUS accounting
- B. SNMP traps
- C. Security Fabric integration
- D. Syslog messages

Answer: A

Explanation:

RADIUS accounting must be enabled on FortiGate so it sends session start and stop records to FortiNAC-F. These accounting messages provide real-time VPN session status updates, allowing FortiNAC-F to track user connections and enforce appropriate network access policies.

NEW QUESTION # 28

When FortiNAC-F is managing VPN clients connecting through FortiGate, why must the clients run a FortiNAC-F agent?

- A. To collect user authentication details
- B. To validate the endpoint policy compliance
- C. To collect the client IP address and MAC address
- D. To transparently update The client IP address upon successful authentication

Answer: C

Explanation:

When FortiNAC-F manages VPN clients through a FortiGate, the agent plays a fundamental role in device identification that standard network protocols cannot provide on their own. In a standard VPN connection, the FortiGate establishes a Layer 3 tunnel and assigns a virtual IP address to the client. While the FortiGate sends a syslog message to FortiNAC-F containing the username and this assigned IP address, it typically does not provide the hardware (MAC) address of the remote endpoint's physical or virtual adapter.

FortiNAC-F relies on the MAC address as the primary unique identifier for all host records in its database. Without the MAC address, FortiNAC-F cannot correlate the incoming VPN session with an existing host record to apply specific policies or track the device's history. By running either a Persistent or Dissolvable Agent, the endpoint retrieves its own MAC address and communicates it directly to the FortiNAC-F service interface. This allows the "IP to MAC" mapping to occur.

Once FortiNAC-F has both the IP and the MAC, it can successfully identify the device, verify its status, and send the appropriate FSSO tags or group information back to the FortiGate to lift network restrictions.

NEW QUESTION # 29

.....

Many people want to be the competent people which can excel in the job in some area and be skillful in applying the knowledge to the practical working in some industry. But the thing is not so easy for them they need many efforts to achieve their goals. Passing the NSE5_FNC_AD-7.6 test certification can make them become that kind of people and if you are one of them buying our NSE5_FNC_AD-7.6 study materials will help you pass the NSE5_FNC_AD-7.6 test smoothly with few efforts needed.
