Fortinet FCP - Azure Cloud Security 7.4 Administrator Sample Questions (Q15-Q20):

NEW QUESTION # 15
You deployed a FortiGate active-active with ELB/ILB solution using the template from Azure Marketplace.
What is the purpose of the inbound NAT rules configured in the external load balancer in this deployment?

- A. To allow administrative access to the FortiGate VMs
- B. To filter inbound traffic before it reaches the FortiGate instances
- C. To load balance the incoming traffic between both FortiGate VMs
- D. To forward the health probes to both FortiGate VMs

Answer: A

Explanation:

In anactive-active FortiGate ELB/ILB deployment, theinbound NAT rulesconfigured on theexternal load balancerare used toallow administrative access (e.g., HTTPS, SSH)to the individual FortiGate VMs. Since the public IP is associated with the load balancer, NAT rules are required tomap specific ports to backend FortiGate instancesfor management access.

NEW QUESTION # 16

What are two characteristics of Azure standard public IP addresses? (Choose two.)

- A. They can be used with load balancers of any SKU
- B. They support the use of availability zones
- C. They require the configuration of NSGs for inbound traffic
- D. They can be dynamic or static

Answer: B,D

Explanation:

They support the use of availability zones - Standard public IP addresses are zone-redundant and support availability zone deployments for high availability.

They can be dynamic or static - Azure standard public IPs can be configured as static or dynamic, offering flexibility based on deployment needs.

A high availability (HA) active-active FortiGate with Elastic Load Balancing (ELB) and Internal Load Balancing (ILB) was deployed with a default setup to filter traffic to a Linux server running Apache server.
Ports 80 and 22 are open on the Linux server, and on FortiGate a VIP and firewall policy are configured to allow traffic through ports 80 and 22. Traffic on port 80 is successful, but traffic on port 22 is not detected by FortiGate.
What configuration changes could you perform to allow SSH traffic?

- A. Add a new Inbound NAT rule
- B. Add a new Azure load balancing rule
- C. Include the Linux server in the back-end pool options
- D. Configure a customized port under the Frontend IP configuration

Answer: A

Explanation:
Sinceport 80 traffic is reaching the FortiGate(as shown in the sniffer output) butport 22 traffic is not, the issue liesbefore the FortiGate, at theAzure Load Balancer level. Azure Load Balancers require anInbound NAT ruleto forward specific ports (like SSH on port 22) to a specific backend VM. Creating a newInbound NAT rule for port 22will allow SSH traffic to be properly routed to the FortiGate VM.

NEW QUESTION # 18
How does Azure ExpressRoute contribute to achieving predictable latency for network traffic?

- A. By establishing dedicated private connections to Azure data centers
- B. By relying on load balancing to dynamically optimize latency
- C. By using public internet connections for enhanced routing flexibility
- D. By prioritizing Azure ExpressRoute traffic over other network traffic

Answer: A

Explanation:
Azure ExpressRouteprovidesdedicated private connectionsbetween on-premises infrastructure and Azure data centers, bypassing the public internet. This results inmore predictable latency, higher reliability, and better security, making it ideal for mission-critical workloads.
