New CloudSec-Pro Dumps Free, New CloudSec-Pro Test Pass4sure

We have experienced education technicians and stable first-hand information to provide you with high quality & efficient CloudSec-Pro training dumps. If you are still worried about your exam, our exam dumps may be your good choice. Our CloudSec-Pro training dumps cover nearly 85% real test materials so that if you master our dumps questions and answers you can clear exams successfully. Don't worry over trifles. If you purchase our CloudSec-Pro training dumps you can spend your time on more significative work.

The pas rate is 98.95% for the CloudSec-Pro exam torrent, and you can pass the exam if you choose us. The CloudSec-Pro exam dumps we recommend to you are the latest information we have, with that you can know the information of the exam center timely. Furthermore, with skilled professionals to revise the CloudSec-Pro Questions and answers, the quality is high. And we offer you free update for 365 days, therefore you can get update version timely, and the update version will be sent to your email address automatically.

New CloudSec-Pro Test Pass4sure, New CloudSec-Pro Test Dumps

You don't have to install excessive plugins or software to attempt this Palo Alto Networks CloudSec-Pro practice test. This version of CloudSec-Pro practice exam is supported by these operating systems: Windows, Mac, iOS, Linux, and Android. It is a customizable Palo Alto Networks CloudSec-Pro Practice Exam. It means takers can change its duration and CloudSec-Pro practice test question numbers. The actual Palo Alto Networks CloudSec-Pro exam environment that the practice exam creates is

beneficial to counter Palo Alto Networks Cloud Security Professional (CloudSec-Pro) exam anxiety.

Palo Alto Networks Cloud Security Professional Sample Questions (Q34-Q39):

NEW QUESTION # 34
Which two offerings will scan container images in Jenkins pipelines? (Choose two.)

- A. Jenkins Docker plugin
- B. Prisma Cloud Visual Studio Code plugin with Jenkins integration
- C. Twistcli
- D. Compute Azure DevOps plugin
- E. Compute Jenkins plugin

Answer: C,E

Explanation:
https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-admin-compute/continuous_integration /jenkins_plugin.html
https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-admin-compute/continuous_integration /jenkins_pipeline_project
To scan container images in Jenkins pipelines, Prisma Cloud offers two specific tools:
* D. Twistcli: This is a command-line interface tool provided by Prisma Cloud that allows users to scan container images for vulnerabilities and compliance issues. It can be integrated into Jenkins pipelines to automate the scanning process as part of the CI/CD workflow1.
* E. Compute Jenkins plugin: This plugin integrates Prisma Cloud's capabilities directly into Jenkins, enabling automated scanning of container images during the build process. It provides a seamless way to include security checks within the Jenkins pipeline1.
Both Twistcli and the Compute Jenkins plugin are designed to work within the Jenkins environment to ensure that container images are scanned for security risks before they are deployed. By integrating these tools into the pipeline, developers can identify and address vulnerabilities early in the development cycle, contributing to a more secure software delivery process

NEW QUESTION # 35
Which two processes ensure that builds can function after a Console upgrade? (Choose two.)

- A. allowing Jenkins to automatically update the plugin
- B. creating a new policy that allows older versions of twistcli to connect the Console
- C. updating any build environments that have twistcli included to use the latest version
- D. configuring build pipelines to download twistcli at the start of each build

Answer: C,D

Explanation:
Ensuring that builds can function properly after a Console upgrade in Prisma Cloud involves strategies that maintain compatibility and functionality with the latest versions of the Prisma Cloud tools and services.
* Option B: Updating any build environments that have twistcli included to use the latest version is crucial because twistcli is Prisma Cloud's CLI tool used for scanning images, serverless functions, and IaC for vulnerabilities and compliance issues. Ensuring that twistcli is up to date in all build environments guarantees compatibility with the latest features and security definitions provided by Prisma Cloud, as well as ensures that any new or updated policies and checks are accurately enforced during the build process.
* Option C: Configuring build pipelines to download twistcli at the start of each build ensures that the most current version of twistcli is used every time a build is initiated. This approach is beneficial in dynamic CI/CD environments where builds are frequent, and maintaining the latest security posture is critical. By downloading twistcli dynamically, teams can automatically adapt to any updates or changes introduced in the Prisma Cloud Console without manual intervention, ensuring seamless integration and continuous compliance with Prisma Cloud's security standards.
References:
Prisma Cloud Documentation: Emphasizes the importance of keeping security tools up to date and integrating them into CI/CD pipelines for continuous security.
Best Practices for Integrating Security Tools in CI/CD: Guides on how to effectively incorporate security scanning tools like twistcli into the CI/CD process to ensure builds are secure and compliant.

NEW QUESTION # 36

A customer's Security Operations Center (SOC) team wants to receive alerts from Prisma Cloud via email once a day about all policies that have a violation, rather than receiving an alert every time a new violation occurs.

Which alert rule configuration meets this requirement?

- A. Set up email integrations under the "Integrations" tab in "Settings" and create a notification template.
- B. Configure an alert rule with all the defaults except selecting email within the "Alert Notifications" tab and specifying recipient.
- C. Configure an alert rule. Under the "Policies" tab, select "All Policies." In the "Set Alert Notifications" tab, select "Email > Recurring," set to repeat every 1 day, and then enable "Email."
- D. Configure an alert rule. Under the "Policies" tab, select "High Risk Severity Policies." In the "Set Alert Notifications" tab, select "Email > Recurring," set to repeat every 1 day, and enable "Email."

Answer: C

Explanation:

To receive daily email alerts for all policy violations, the SOC team should configure an alert rule that encompasses all policies and sets the notification frequency to once per day. This can be achieved by:

* Navigating to the "Policies" tab within the alert rule configuration and selecting "All Policies" to ensure that the rule applies to every policy.
* Moving to the "Set Alert Notifications" tab and choosing the "Email" notification method.
* Setting the notification to "Recurring" with a frequency of every 1 day.
* Enabling the email notification by specifying the recipient's email address.

This configuration ensures that the SOC team will receive a consolidated email once a day that includes information on all policies that have been violated, rather than receiving multiple alerts throughout the day as new violations occur. It allows the team to review the compliance status efficiently and prioritize their response accordingly.

NEW QUESTION # 37

The security team wants to target a CNAF policy for specific running Containers. How should the administrator scope the policy to target the Containers?

- A. scope the policy to Host names.
- B. scope the policy to Image names.
- C. scope the policy to namespaces.
- D. scope the policy to Defender names.

Answer: B

Explanation:

To specifically target running containers with a Cloud Native Application Framework (CNAF) policy in Prisma Cloud, the administrator should scope the policy to Image names. By doing so, the policy will apply to containers based on the images they were created from, allowing for precise targeting of security policies to specific containers. This approach is part of Prisma Cloud's capabilities to provide granular security controls for containerized environments, ensuring that policies are effectively applied to the relevant containers.

https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-admin-compute/waas/deploy_waas /deployment_containers

NEW QUESTION # 38

A Systems Engineer is the administrator of a self-hosted Prisma Cloud console. They upgraded the console to the latest version. However, after the upgrade, the console does not show all the policies configured. Before they upgraded the console, they created a backup manually and exported it to a local drive. Now they have to install a Prisma Cloud to restore from the backup that they manually created. Which Prisma Cloud version can they can restore with the backup?

- A. The same version of the Prisma Cloud Self-Hosted Console that the backup created
- B. Any version of Prisma Cloud Self-Hosted Console
- C. The latest version of Prisma Cloud Self-Hosted Console
- D. Up to N-2 versions of the Prisma Cloud Self-Hosted Console that the backup created

Answer: A

Explanation:

https://docs.prismacloud.io/en/compute-edition/31/admin-guide/configure/disaster-recovery In scenarios where a backup is created manually before upgrading a self-hosted console, it is crucial to restore the system using the backup that matches the version of the Prisma Cloud Self-Hosted Console from which it was taken. This ensures compatibility and integrity of the data and configurations. Using a backup with a different version of the console may lead to inconsistencies or loss of information due to potential changes in the software's data structures or features between versions. Therefore, to ensure a successful restoration, the backup must be applied to the same version of the Prisma Cloud Self-Hosted Console that it was created from.

NEW QUESTION # 39

......

In informative level, we should be more efficient. In order to take the initiative, we need to have a strong ability to support the job search. And how to get the test CloudSec-Pro certification in a short time, which determines enough qualification certificates to test our learning ability and application level. We hope to be able to spend less time and energy to take into account the test CloudSec-Pro Certification, but the qualification examination of the learning process is very wasted energy, so how to achieve the balance? The CloudSec-Pro exam prep can be done to help you pass the CloudSec-Pro exam.
