Our website experts simplify complex concepts of the CDP-3002 exam questions and add examples, simulations, and diagrams to explain anything that might be difficult to understand. Therefore, even ordinary examiners can master all the CDP-3002 learning materials without difficulty. And the price of our CDP-3002 Study Guide is reasonable for even the students can afford it. At the same time, we give some discounts from time to time, you can buy our CDP-3002 practice engine at a favorable price.

Do you want to pass the exam as soon as possible? CDP-3002 exam dumps of us will give you such opportunity like this. You can pass your exam by spending about 48 to 72 hours on practicing CDP-3002 exam dumps. With skilled experts to revise the exam dumps, the CDP-3002 learning material is high-quality, and they will examine the CDP-3002 Exam Dumps at times to guarantee the correctness. Besides, we offer you free update for 365 days after purchasing, and the update version for CDP-3002 exam dumps will be sent to your email address automatically.

It is common in modern society that many people who are more knowledgeable and capable than others finally lost some good opportunities for development because they didn't obtain the CDP-3002 certification. The prerequisite for obtaining the CDP-3002 Certification is to pass the exam, but not everyone has the ability to pass it at one time. But our CDP-3002 exam questions will help you pass the exam by just one go for we have the pass rate high as 98% to 100%.

Cloudera CDP Data Engineer - Certification Exam Sample Questions (Q33-Q38):

NEW QUESTION # 33

You're building an Airflow DAG to extract data from a database table that is constantly updated. How can you implement incremental extraction to avoid processing the entire table each time the DAG runs?

- A. Use the File sensor to check for the presence of a new data file and trigger the DAG only when the file appears.
- B. Implement a custom Python script to track the last processed record and use it to filter the data during subsequent runs.
- C. Configure the database connection to only retrieve newly added data.
- D. Leverage the Previous execution operator to access the execution date of the previous DAG run and use it as a filter in the extraction query.

Answer: D

Explanation:

While other options might be applicable in certain scenarios, option B is the most common and efficient way to implement

incremental extraction in Airflow for databases. The Previous execution operator allows you to access the execution date of the previous DAG run, which can be used as a filter in the extraction query to only retrieve data added or modified since the last run.

NEW QUESTION # 34

Which tool or API is primarily used for monitoring and inspecting the performance of Spark applications in real-time?

A Spark History Server

- A. Spark Web UI
- B. Apache Ambari
- C. Hadoop YARN ResourceManager UI

Answer: C

Explanation:

The Spark Web UI is a monitoring tool that provides information about the execution of a Spark application. It gives insights into the scheduler stages and tasks, executor usage, storage usage, and environmental settings. It is accessible while the application is running and is the primary tool for real-time performance monitoring. The Spark History Server helps in inspecting the application performance after it has completed. Hadoop YARN ResourceManager UI and Apache Ambari are more generally used for cluster management and monitoring, not specifically for real-time Spark application performance.

NEW QUESTION # 35

What is the impact of caching intermediate data in Spark on iterative algorithms' performance?

- A. It decreases fault tolerance by storing data in volatile storage.
- B. It improves performance by reducing the need to recompute data in each iteration.
- C. It has no impact on performance but increases storage requirements.
- D. It significantly increases the execution time of each iteration.

Answer: B

Explanation:

Caching intermediate data in Spark can significantly improve the performance of iterative algorithms. By keeping frequently accessed data in memory across iterations, it eliminates the need for recomputing the data for each iteration, thereby reducing the overall execution time and increasing the efficiency of the algorithm.

NEW QUESTION # 36

Describe how you would implement a data lineage solution within the Cloudera Data Engineering service to track the origin and flow of data throughout your data pipelines.

- A. Utilize custom scripting to track data movement between pipeline steps.
- B. Manually document data lineage within the YAML configuration files.
- C. Integrate the service with a separate third-party lineage tracking tool.
- D. Leverage the integrated lineage tracking capabilities of the Cloudera Data Engineering service.

Answer: D

NEW QUESTION # 37

What are the potential trade-offs to consider when using checkpointing in Spark applications?

- A. Checkpointing always improves performance and has no drawbacks
- B. Checkpointing requires manual configuration and can be error-prone
- C. Checkpointing introduces overhead for storing and recovering data, impacting performance
- D. All of the above

Answer: C,D

Explanation:

While checkpointing offers benefits, it comes with trade-offs. It adds overhead for storing and recovering data, potentially impacting performance. B. Configuring checkpoints effectively is crucial to avoid unnecessary overhead. Option A is incorrect, and while configuration is involved, it's not inherently error-prone. C when done carefully.
