To do this you just need to pass the CDPSE exam which is quite challenging and demands complete CDPSE exam questions preparation. For the quick and complete ISACA CDPSE PDF Questions preparation you can get help from DumpsTorrent. The DumpsTorrent is a leading platform that offers valid, updated, and real CDPSE Questions that are particularly designed for quick and complete CDPSE exam preparation.

## ISACA Certified Data Privacy Solutions Engineer Sample Questions (Q222-Q227):

### NEW QUESTION # 222

Which of the following should be done FIRST to establish privacy to design when developing a contact-tracing application?

- A. Identify differential privacy techniques.
- B. Conduct a privacy impact assessment (PIA).
- C. Identify privacy controls for the application.
- D. Conduct a development environment review.

**Answer: A**

### NEW QUESTION # 223

Data collected by a third-party vendor and provided back to the organization may not be protected according to the organization's privacy notice. Which of the following is the BEST way to address this concern?

- A. Obtain independent assurance of current practices.
- B. Review the privacy policy.
- C. Validate contract compliance.
- D. Re-assess the information security requirements.

**Answer: C**

Explanation:

The best way to address the concern that data collected by a third-party vendor and provided back to the organization may not be protected according to the organization's privacy notice is to validate contract compliance. This means that the organization should verify that the third-party vendor is adhering to the terms and conditions of the contract, which should include clauses on data protection, privacy, and security. The contract should also specify the obligations and responsibilities of both parties regarding data collection, processing, storage, transfer, retention, and disposal. By validating contract compliance, the organization can ensure that the third-party vendor is following the same privacy standards and practices as the organization.

### NEW QUESTION # 224

Which of the following vulnerabilities is MOST effectively mitigated by enforcing multi-factor authentication to obtain access to personal information?

- A. End users using weak passwords
- B. Organizations using weak encryption to transmit data
- C. End users forgetting their passwords
- D. Vulnerabilities existing in authentication pages

**Answer: A**

Explanation:

One of the most common vulnerabilities that can compromise the access to personal information is end users using weak passwords. Weak passwords are passwords that are easy to guess, crack, or steal, such as passwords that are short, simple, common, or reused. Weak passwords can allow unauthorized or malicious parties to gain access to personal information and cause privacy breaches, leaks, or misuse. Multi-factor authentication is an effective way to mitigate this vulnerability, as it requires end users to provide more than one piece of evidence to verify their identity, such as something they know (e.g., password), something they have (e.g., token), or something they are (e.g., biometric). Multi-factor authentication makes it harder for attackers to bypass the authentication process and access personal information. Reference: : CDPSE Review Manual (Digital Version), page 107

### NEW QUESTION # 225

A privacy risk assessment identified that a third-party collects personal data on the organization's behalf. This finding could subject

the organization to a regulatory fine for not disclosing this relationship. What should the organization do NEXT?

- A. Review the third-party relationship to determine who should be collecting data.
- B. Update the risk assessment process to cover only required disclosures.
- **C. Disclose the relationship to those affected in jurisdictions where such disclosures are required.**
- D. Amend the privacy policy to include a provision that data might be collected by trusted third parties.

**Answer: C**

Explanation:

Explanation

The organization should disclose the relationship to those affected in jurisdictions where such disclosures are required, as this is the most appropriate and compliant action to take after identifying a privacy risk related to third-party data collection. Disclosing the relationship to the data subjects is a way of providing transparency and accountability, as well as respecting their rights and choices regarding their personal data. It also helps the organization avoid regulatory fines or sanctions for not complying with the applicable privacy laws or regulations that mandate such disclosures. The other options are not as effective or sufficient as disclosing the relationship, as they do not address the root cause of the risk, do not mitigate the potential harm to the data subjects, or do not align with the privacy principles and best practices.

### NEW QUESTION # 226

A migration of personal data involving a data source with outdated documentation has been approved by senior management. Which of the following should be done NEXT?

- A. Engage an external auditor to review the source data.
- B. Check the documentation version history for anomalies.
- C. Ensure appropriate data classification.
- **D. Review data flow post migration.**

**Answer: D**

### NEW QUESTION # 227

.....
