Oracle Cloud Infrastructure 2025 Application Integration Professional Sample Questions (Q35-Q40):

NEW QUESTION # 35

Which statements are TRUE with regard to SOAP and the advantages it provides? Select THREE.

- A. SOAP provides flexibility for message formatting allowing for loose coupling between a client and a server.
- B. SOAP is platform independent and programming language independent.
- C. SOAP over HTTP is typically not blocked by firewalls and proxy servers.
- D. SOAP clients can easily hold stateful references to remote server-side SOAP objects.
- E. SOAP commonly serves as a cleaning agent that removes excess data from the transmission protocol.
- F. SOAP typically leverages XML-based payloads to communicate between two client machines across any modern network.

Answer: B,C,F

Explanation:

Comprehensive and Detailed Explanation:

SOAP (Simple Object Access Protocol) advantages:

B:True-platform and language independence via XML and WSDL.

C:True-XML payloads are standard for SOAP communication.

F:True-HTTP transport makes it firewall-friendly.

A:False-SOAP is stateless by design; state requires custom implementation.

D:False-a humorous misinterpretation; SOAP doesn't "clean" data.

NEW QUESTION # 36

Which two statements are true regarding messaging adapters in Oracle Integration Cloud (OIC)?

- A. Both the Apache Kafka and OCI Streaming adapters support XML, JSON, and AVRO message formats.
- B. The OCI Streaming adapter does not support consuming messages from a specified consumer group.
- C. It is not mandatory to install a connectivity agent to use the OCI Streaming Adapter for Inbound polling.
- D. The Apache Kafka Adapter can be configured to support Transactions in case of Producers.

Answer: A,D

Explanation:

Comprehensive and Detailed Explanation:

Messaging adapters:

A:True-Kafka and OCI Streaming support XML, JSON, and AVRO.

C:True-Kafka adapter supports producer transactions.

B:False-OCI Streaming supports consumer groups.

NEW QUESTION # 37

You are tasked with testing an integration that uses a REST trigger in Oracle Integration Cloud (OIC). You have successfully configured the REST Adapter, and now you want to verify that the integration functions correctly.

What should you do to test the integration?

- A. Manually trigger the integration by sending an email to a specified email address with the required REST parameters.
- B. Export the integration as a .jar file and run it in a local development environment.
- C. Use the "Test" button in the integration designer to create a request, validate the response, and review the execution logs.
- D. Perform a SQL query on the associated database to ensure that the expected data is present.

Answer: C

Explanation:

Using the "Test" button is the most effective way to test a REST trigger-based integration in OIC. This method allows for direct

interaction with the integration, validation of requests/responses, and access to detailed logs for troubleshooting.

NEW QUESTION # 38

The Oracle Integration Cloud (OIC) integration designer editor provides a data mapper UI tool that is available for Map actions. Which statements are TRUE regarding the use of the Mapper tool? Select TWO.

- A. You cannot drag and drop a source data element to a target node element that is already mapped.
- **B. You can drag and drop a source data element to multiple target node elements.**
- C. You cannot drag and drop an XPath function activity directly to a target node element.
- **D. You cannot drag and drop an XSLT flow control statement directly to a target node element.**

Answer: B,D

Explanation:

Comprehensive and Detailed Explanation:

OIC's Data Mapper simplifies transformations. Let's evaluate each option:

Option A: You cannot drag and drop an XSLT flow control statement directly to a target node element.

True:XSLT flow controls (e.g., <xsl:for-each>) require manual coding in an external editor for advanced mappings. OIC's UI doesn't support dragging these directly; you must export the map, edit the XSLT, and reimport it. This limitation ensures simplicity in the UI while allowing power users flexibility.

Option B: You can drag and drop a source data element to multiple target node elements.

True:The mapper allows one-to-many mappings. For example, dragging "CustomerName" from the source to both "BillingName" and "ShippingName" in the target is supported, streamlining repetitive mappings.

Option C: You cannot drag and drop a source data element to a target node element that is already mapped.

False:You can overwrite an existing mapping by dragging a new source element to a mapped target, replacing the prior link. This flexibility aids iterative design.

Option D: You cannot drag and drop an XPath function activity directly to a target node element.

False:XPath functions (e.g., concat()) can be dragged from the function palette to a target node, applying transformations directly. This enhances usability.

Why A and B:A reflects a UI constraint, and B showcases mapping flexibility, both accurate per OIC's mapper design.

Use Case Example:Mapping "OrderDate" to multiple date Hawkins in a CRM sync, then using current-date() in the mapper, demonstrates B and D's capabilities.

NEW QUESTION # 39

You have a use case that requires a large data extract, which is more than 10MB, to be processed within an Oracle Integration Cloud (OIC) integration. Which are three valid options?

- A. Retrieve the file by invoking a SOAP API, which sends Base64 encoded data within the SOAP body, and then decode the data and make it available for processing using a Stage File action.
- **B. Send the file as a multipart attachment to an OIC integration using a REST trigger, and make it available for processing using a Stage File action.**
- C. Upload the file to the OIC file server, and then use an FTP adapter Download File operation, which makes it available for processing using a Stage File action.
- **D. Retrieve the file by invoking a SOAP API, which sends the document as an MTOM attachment, and make it available for processing using a Stage File action.**
- **E. Retrieve the file from an external endpoint using APIs that support application/blob as content type, and make it available for processing using a Stage File action.**

Answer: B,D,E

Explanation:

Comprehensive and Detailed Explanation:

Handling large files (>10MB) in OIC requires efficient mechanisms to avoid memory issues. Let's analyze each option:

Option A:True-REST trigger with multipart attachments is ideal for inbound large files, processed via Stage File.

Option B:False-Base64 in SOAP body bloats data (33% overhead), risking memory limits for >10MB files.

Option C:True-MTOM optimizes SOAP attachments, suitable for large files, processed with Stage File.

Option D:True-APIs returning application/blob handle binary data efficiently, staged for processing.
