We provide free update to the clients within one year. The clients can get more AI-900 study materials to learn and understand the latest industry trend. We boost the specialized expert team to take charge for the update of AI-900 study materials timely and periodically. They refer to the excellent published authors' thesis and the latest emerging knowledge points among the industry to update our AI-900 Study Materials. After one year, the clients can enjoy 50 percent discounts and the old clients enjoy some certain discounts when purchasing. So the clients can enjoy more benefits after they buy our AI-900 study materials.

Microsoft AI-900, also known as the Microsoft Azure AI Fundamentals Certification Exam, is an entry-level certification exam that is designed for individuals who are interested in understanding the basics of artificial intelligence (AI) and how it can be applied in the Microsoft Azure cloud platform. AI-900 exam is ideal for individuals who are interested in pursuing a career in AI or data science, as well as professionals who are looking to broaden their knowledge of AI and its applications.

The AI-900 Exam is a great way to showcase your expertise in AI and Azure services, which can help you stand out from the crowd in the job market. Organizations worldwide are looking for skilled professionals who can help them leverage AI to achieve their business goals. Having an AI-900 certification on your resume can make you a valuable asset to any organization looking to implement AI solutions.

Microsoft AI-900 Dumps PDF To Gain Brilliant Result 2026

Everyone has their own characteristics when they start to study our AI-900 exam questions. In order for each user to find a learning method that suits them, we will provide you with a targeted learning version and study plan. There are three versions of the AI-900 Practice Engine for you to choose: the PDF, Software and APP online. And further more, we have free demos of the AI-900 learning guide on the website for you to download before you make the purchase.

Microsoft Azure AI Fundamentals Sample Questions (Q263-Q268):

NEW QUESTION # 263

What are two metrics that you can use to evaluate a regression model? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. balanced accuracy
- B. area under curve (AUC)
- C. coefficient of determination (R2)
- D. root mean squared error (RMSE)
- E. F1 score

Answer: C,D

Explanation:

Explanation

A: R-squared (R2), or Coefficient of determination represents the predictive power of the model as a value between -inf and 1.00. 1.00 means there is a perfect fit, and the fit can be arbitrarily poor so the scores can be negative.

C: RMS-loss or Root Mean Squared Error (RMSE) (also called Root Mean Square Deviation, RMSD), measures the difference between values predicted by a model and the values observed from the environment that is being modeled.

NEW QUESTION # 264

Select the answer that correctly completes the sentence

Answer:

Explanation:

NEW QUESTION # 265

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

This question is based on identifying Natural Language Processing (NLP) workloads, which is a fundamental topic in the Microsoft Azure AI Fundamentals (AI-900) certification. According to the official Microsoft Learn module "Describe features of natural language processing (NLP) workloads on Azure", NLP enables computers to understand, interpret, and generate human language - both written and spoken.

* A bot that responds to queries by internal users - Yes This is an example of a natural language processing workload because it involves understanding and generating human language. A chatbot interprets user input (queries written or spoken) using language understanding and text analytics, and then produces appropriate responses. On Azure, this can be implemented using Azure AI Language (LUIS) and the Azure Bot Service, both core NLP technologies.

* A mobile application that displays images relating to an entered search term - No This application involves searching for or displaying images, which falls under the computer vision workload, not NLP.

Computer vision focuses on analyzing and interpreting visual data like photos or videos, while NLP deals with language and text processing.

* A web form used to submit a request to reset a password - No A password reset form involves structured input fields and user authentication, not natural language understanding or generation. It's part of standard web development and identity management, not an NLP-related process.

Therefore, based on Microsoft's AI-900 curriculum definitions:

The only true NLP example is the bot responding to user queries, since it processes and understands natural language input to generate conversational output.

NEW QUESTION # 266

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Box 1: Yes

Azure bot service can be integrated with the powerful AI capabilities with Azure Cognitive Services.

Box 2: Yes

Azure bot service engages with customers in a conversational manner.

Box 3: No

The QnA Maker service creates knowledge base, not question and answers sets.

Note: You can use the QnA Maker service and a knowledge base to add question-and-answer support to your bot. When you create your knowledge base, you seed it with questions and answers.
