We provide the best Plat-Arch-201 Study Guide and hope our sincere service will satisfy all the clients. And our services are praised by our worthy customers who said that when they talked with us, they knew we are reliable and professional.

Salesforce Certified Platform Data Architect Sample Questions (Q111-Q116):

NEW QUESTION # 111

Universal Containers has a custom object with millions of rows of data. When executing SOQL queries, which three options prevent

a query from being selective? (Choose three.)

- **A. Performing large loads and deletions.**
- **B. Using NOT and != operators.**
- C. Using a custom index on a deterministic formula field.
- D. Using trailing % wildcards.
- **E. Using leading % wildcards.**

Answer: A,B,E

Explanation:

Using leading % wildcards, performing large loads and deletions, and using NOT and != operators are three options that prevent a query from being selective. These options can cause the query to scan a large number of records or indexes, which can negatively impact the performance and scalability of the query. Using a custom index on a deterministic formula field, on the other hand, can improve the query selectivity by allowing the query to use the index instead of scanning all the records.

NEW QUESTION # 112

Universal Containers (UC) is implementing a Salesforce project with large volumes of data and daily transactions. The solution includes both real-time web service integrations and Visualforce mash - ups with back-end systems. The Salesforce Full sandbox used by the project integrates with full-scale back-end testing systems. What two types of performance testing are appropriate for this project? Choose 2 answer

- **A. Pre-go-live automated page-load testing against the Salesforce Full sandbox.**
- B. Post go-live automated page-load testing against the Salesforce Production org.
- **C. Stress testing against the web services hosted by the integration middleware.**
- D. Pre-go-live unit testing in the Salesforce Full sandbox.

Answer: A,C

Explanation:

Pre-go-live automated page-load testing against the Salesforce Full sandbox can help identify and resolve any performance bottlenecks or issues before deploying the solution to production.

The Full sandbox is an ideal environment for performance testing as it replicates the production org in terms of data, metadata, and integrations. Stress testing against the web services hosted by the integration middleware can also help evaluate the scalability and reliability of the integration solution under high load conditions.

NEW QUESTION # 113

Universal Containers is setting up an external Business Intelligence (BI) system and wants to extract 1,000,000 Contact records. What should be recommended to avoid timeouts during the export process?

- **A. Utilize the Bulk API to export the data.**
- B. Schedule a Batch Apex job to export the data.
- C. Use GZIP compression to export the data.
- D. Use the SOAP API to export data.

Answer: A

Explanation:

According to the exam guide, one of the objectives is to "describe the use cases and considerations for using various tools and techniques for data migration (for example, Data Loader, Bulk API)". This implies that option B is the correct way to extract large volumes of data from Salesforce. The Bulk API is designed to handle large-scale data operations and avoid timeouts.

NEW QUESTION # 114

A health care provider wishes to use Salesforce to track patient care. The following actions are in Salesforce

1. Payment Providers: Orgs who pay for the care of patients.
2. Doctors: They provide care plans for patients and need to support multiple patients, they are provided access to patient information.
3. Patients: They are individuals who need care.

A data architect needs to map the actor to Sf objects. What should be the optimal selection by the data architect?

- A. Patients as Contacts, Payment providers as Accounts, & Doctors as Accounts
- B. Patients as Person Accounts, Payment providers as Accounts, & Doctors as Contacts
- **C. Patients as Person Accounts, Payment providers as Accounts, & Doctors as Person Account**
- D. Patients as Accounts, Payment providers as Accounts, & Doctors as Person Accounts

Answer: C

Explanation:

Patients as Person Accounts, Payment providers as Accounts, & Doctors as Person Accounts is the optimal selection by the data architect to map the actor to Salesforce objects. This is because Person Accounts are a special type of accounts that can store both business and personal information for individual customers. Payment providers are organizations that pay for the care of patients, so they can be modeled as Accounts. Doctors are also individuals who provide care plans for patients and need access to patient information, so they can also be modeled as Person Accounts.

NEW QUESTION # 115

Which two statements are accurate with respect to performance testing a Force.com application?

- **A. A performance test plan must be created and submitted to Salesforce customer support.**
- **B. Applications with highly customized code or large volumes should be performance tested.**
- C. Application performance benchmarked in a sandbox can also be expected in production.
- D. All Force.com applications must be performance tested in a sandbox as well as production.

Answer: A,B

Explanation:

A performance test plan is required for any Force.com application that has highly customized code or large volumes of data. You need to create and submit a performance test plan to Salesforce customer support before conducting any performance testing in your sandbox or production org. Applications with highly customized code or large volumes of data should be performance tested to ensure they meet the expected response time and throughput

NEW QUESTION # 116

.....

To succeed on the Salesforce Plat-Arch-201 exam, you require a specific Salesforce Plat-Arch-201 exam environment to practice. But before settling on any one method, you make sure that it addresses their specific concerns about the Plat-Arch-201 exam, such as whether or not the platform they are joining will aid them in passing the Salesforce Certified Platform Data Architect (Plat-Arch-201) exam on the first try, whether or not it will be worthwhile, and will it provide the necessary Plat-Arch-201 Questions.
