

# SOA-C03 Exam Study Solutions, New SOA-C03 Test Blueprint

P.S. Free & New SOA-C03 dumps are available on Google Drive shared by ActualVCE: [https://drive.google.com/open?id=1o5pzi-JomI\\_o9uK10CLNPr5jKsxE5xK](https://drive.google.com/open?id=1o5pzi-JomI_o9uK10CLNPr5jKsxE5xK)

SOA-C03 practice test can be your optimum selection and useful tool to deal with the urgent challenge. With over a decade's striving, our SOA-C03 training materials have become the most widely-lauded and much-anticipated products in industry. We will look to build up R&D capacity by modernizing innovation mechanisms and fostering a strong pool of professionals. Therefore, rest assured of full technical support from our professional elites in planning and designing SOA-C03 Practice Test.

We know that it is hard to stay and study for the AWS Certified CloudOps Engineer - Associate (SOA-C03) exam dumps in one place for a long time. Therefore, you have the option to use AWS Certified CloudOps Engineer - Associate (SOA-C03) PDF questions anywhere and anytime. ActualVCE AWS Certified CloudOps Engineer - Associate (SOA-C03) dumps are designed according to the Amazon SOA-C03 certification exam standard and have hundreds of questions similar to the actual AWS Certified CloudOps Engineer - Associate (SOA-C03) exam.

## New Amazon SOA-C03 Test Blueprint - SOA-C03 Valid Exam Notes

When it comes to negotiating your salary with reputed tech firms, you could feel entirely helpless if you're a fresh graduate or don't have enough experience. You will have no trouble landing a well-paid job in a reputed company if you have Amazon SOA-C03 Certification on your resume. Success in the test is also a stepping stone to climbing the career ladder. If you are determined enough, you can get top positions in your firm with the Amazon SOA-C03 certification.

### Amazon SOA-C03 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• <b>Security and Compliance:</b> This section measures skills of Security Engineers and includes implementing IAM policies, roles, MFA, and access controls. It focuses on troubleshooting access issues, enforcing compliance, securing data at rest and in transit using AWS KMS and ACM, protecting secrets, and applying findings from Security Hub, GuardDuty, and Inspector.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• <b>Monitoring, Logging, Analysis, Remediation, and Performance Optimization:</b> This section of the exam measures skills of CloudOps Engineers and covers implementing AWS monitoring tools such as CloudWatch, CloudTrail, and Prometheus. It evaluates configuring alarms, dashboards, and notifications, analyzing performance metrics, troubleshooting issues using EventBridge and Systems Manager, and applying strategies to optimize compute, storage, and database performance.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>• <b>Deployment, Provisioning, and Automation:</b> This section measures the skills of Cloud Engineers and covers provisioning and maintaining cloud resources using AWS CloudFormation, CDK, and third-party tools. It evaluates automation of deployments, remediation of resource issues, and managing infrastructure using Systems Manager and event-driven processes like Lambda or S3 notifications.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Reliability and Business Continuity:</b> This section measures the skills of System Administrators and focuses on maintaining scalability, elasticity, and fault tolerance. It includes configuring load balancing, auto scaling, Multi-AZ deployments, implementing backup and restore strategies with AWS Backup and versioning, and ensuring disaster recovery to meet RTO and RPO goals.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• <b>Networking and Content Delivery:</b> This section measures skills of Cloud Network Engineers and focuses on VPC configuration, subnets, routing, network ACLs, and gateways. It includes optimizing network cost and performance, configuring DNS with Route 53, using CloudFront and Global Accelerator for content delivery, and troubleshooting network and hybrid connectivity using logs and monitoring tools.</li> </ul>

## Amazon AWS Certified CloudOps Engineer - Associate Sample Questions (Q81-Q86):

### NEW QUESTION # 81

A company manages a set of AWS accounts by using AWS Organizations. The company's security team wants to use a native AWS service to regularly scan all AWS accounts against the Center for Internet Security (CIS) AWS Foundations Benchmark. What is the MOST operationally efficient way to meet these requirements?

- A. Run the CIS AWS Foundations Benchmark by using Amazon Inspector.
- **B. Designate an AWS Security Hub administrator account, automatically enroll new organization accounts, and enable CIS AWS Foundations Benchmark.**
- C. Designate a central security account as the AWS Security Hub administrator account. Use scripts to invite and accept member accounts.
- D. Designate a central security account as the Amazon GuardDuty administrator account and configure CIS scans.

**Answer: B**

Explanation:

AWS Security Hub is the native AWS service that provides continuous compliance checks against security standards, including the CIS AWS Foundations Benchmark. When integrated with AWS Organizations, Security Hub can automatically enroll existing and newly created accounts, eliminating manual invitations and scripts.

By designating a Security Hub administrator account and enabling automatic account onboarding, the organization ensures consistent security posture monitoring across all accounts. CIS benchmark checks are run continuously, and findings are aggregated centrally, simplifying governance and remediation workflows.

Amazon Inspector focuses on vulnerability scanning for EC2, container images, and Lambda functions-not CIS compliance.

GuardDuty is a threat detection service and does not run CIS benchmarks.

Therefore, using AWS Security Hub with automatic organization-wide enrollment is the most efficient solution.

### NEW QUESTION # 82

An application runs on Amazon EC2 instances behind an Application Load Balancer (ALB). The application takes up to 2 minutes to populate a local cache after the application is started. The application reports as healthy in the target group health check a few seconds after starting.

A CloudOps engineer observes that after some of the instances are rebooted, the instances receive an equal share of the traffic immediately after each instance reports as healthy. The application needs to receive a gradually increasing share of the traffic while the application cache is populated.

Which solution will meet this requirement?

- A. Change the HealthCheckTimeoutSeconds paramotor in the target group to 120 seconds. Before rebooting the instances, deregister the instances from the target group. After rebooting the instances, register the instances with the target group.
- **B. Configure an Amazon CloudWatch alarm to monitor the health check status. Configure the action of the alarm to restart an EC2 instance if a health check fails. Change the loadbalancing.algorithm.type target group attribute to be weighted\_random.**
- C. Create an Amazon EC2 Auto Scaling group. Attach the existing EC2 instances to the Auto Scaling group. Configure an

EC2 Auto Scaling lifecycle hook to move starting instances to the Pending Wait state. Update the application to complete the lifecycle hook when the local cache has been populated.

- **D. Change the `slow_start.duration_seconds` target group attribute to 120 seconds. Before rebooting the instances, deregister the instances from the target group. After rebooting the instances, register the instances with the target group.**

**Answer: D**

Explanation:

The slow start feature of an ALB target group (`slow_start.duration_seconds`) is specifically designed to let new or newly healthy targets ramp up gradually, giving them a smaller, increasing share of traffic over a defined period. Setting it to 120 seconds allows each instance to warm its local cache during that time instead of receiving a full share of requests immediately, which matches the 2-minute cache warm-up requirement.

### NEW QUESTION # 83

A company runs an application on Amazon EC2 instances in an Auto Scaling group. Scale-out actions take a long time because of long-running boot scripts. The CloudOps engineer must reduce scale-out time without overprovisioning. Which solution will meet these requirements?

- **A. Add a warm pool to the Auto Scaling group.**
- B. Change the launch configuration to use a larger instance size.
- C. Increase the minimum number of instances in the Auto Scaling group.
- D. Add a predictive scaling policy to the Auto Scaling group.

**Answer: A**

Explanation:

Comprehensive Explanation (250-350 words):

An Auto Scaling warm pool keeps pre-initialized instances in a stopped or running state, allowing them to be quickly attached to the Auto Scaling group when scaling events occur. This significantly reduces scale-out latency caused by long bootstrapping scripts.

Unlike increasing the minimum instance count, warm pools do not permanently overprovision resources.

Predictive scaling improves timing but does not eliminate boot time delays.

Therefore, warm pools provide the fastest scale-out with minimal cost overhead.

### NEW QUESTION # 84

A company uses a large number of Linux-based Amazon EC2 instances to run business operations. The company uses AWS Systems Manager to manage the EC2 instances. The company wants to ensure that the Systems Manager Agent (SSM Agent) is always up to date with the latest version.

Which solution will meet this requirement in the MOST operationally efficient way?

- **A. Enable the Auto update SSM Agent setting in Systems Manager Fleet Manager.**
- B. Use GitHub notifications and a Systems Manager Automation document.
- C. Enable the Auto update SSM Agent setting in Systems Manager Patch Manager.
- D. Subscribe to SSM Agent GitHub notifications and use Lambda to update agents.

**Answer: A**

Explanation:

AWS Systems Manager provides a built-in capability to automatically update the SSM Agent on managed instances. Enabling Auto update SSM Agent ensures that instances receive the latest agent version without manual intervention or custom automation.

This setting is centrally managed and applies across the fleet, making it the most scalable and operationally efficient solution. It eliminates the need for external notifications, custom Lambda functions, or scheduled automation workflows.

Options B and D introduce unnecessary complexity and operational burden. Option C is incorrect because Patch Manager is designed for operating system patching, not for managing SSM Agent updates.

Therefore, enabling automatic SSM Agent updates is the best solution.

### NEW QUESTION # 85

A company is using AWS CloudTrail and wants to ensure that SysOps administrators can easily verify that the log files have not been deleted or changed.

Which action should a SysOps administrator take to meet this requirement?

- **A. Enable CloudTrail log file integrity validation when the trail is created or updated.**
- B. Grant administrators access to the AWS Key Management Service (AWS KMS) key used to encrypt the log files.
- C. Turn on Amazon S3 server access logging for the bucket storing the log files.
- D. Configure the S3 bucket to replicate the log files to another bucket.

**Answer: A**

Explanation:

CloudTrail can produce digest files and sign log files to detect tampering. Enabling log file integrity validation ensures that any modification or deletion of delivered log files can be detected by verification against the digests and signatures, providing verifiable evidence of tampering or non-tampering for each log file. This is the standard mechanism used to assure SysOps that logs have not been altered after delivery.

## NEW QUESTION # 86

.....

As we all know, we are now facing more and more competition. The SOA-C03 exam is an important way to improve our competitiveness. The certification can show others whether we have a certain skill, whether we meet the requirements of others, for us. Get approved at work to increase your chips. For different needs, our SOA-C03 Certification Exam questions are flexible and changeable. On the one hand, SOA-C03 pdf files allow you to make full use of fragmented time, and you will be able to pass the SOA-C03 exam with the least time and effort with our SOA-C03 training materials.
