This part of the candidates need to be fully prepared to allow them to get the highest score in the MB-700 Exam, make their own configuration files compatible with market demand.

Microsoft MB-700 (Microsoft Dynamics 365: Finance and Operations Apps Solution Architect) Certification Exam is designed to validate the skills and knowledge of professionals who work with Microsoft Dynamics 365: Finance and Operations Apps solutions. MB-700 exam is intended for individuals who are responsible for designing and implementing solutions that enable organizations to streamline their business processes and increase productivity.

Microsoft MB-700 exam is designed for individuals who want to demonstrate their skills as a Microsoft Dynamics 365: Finance and Operations Apps Solution Architect. MB-700 Exam evaluates the candidate's knowledge of the solution design, architecture, implementation, deployment, and management of Microsoft Dynamics 365 Finance and Operations Apps. It is ideal for

professionals who work in the field of solution architecture or solution design and want to prove their expertise in the use of Microsoft Dynamics 365 Finance and Operations Apps.

## Microsoft Dynamics 365: Finance and Operations Apps Solution Architect Sample Questions (Q132-Q137):

### NEW QUESTION # 132

A company implements Dynamics 365 Commerce. The company has 200 retail stores. The company has a retail store custom solution and a third-party e-commerce solution. Dynamics 365 Commerce will replace the custom retail point of sale (POS) solution. Dynamics 365 Commerce must integrate with the company's third-party e-commerce solution. The third-party e-commerce solution must meet the following requirements:

- \* Integrate with Microsoft Dynamics 365 for in-store order pickups.
- \* Store orders in XML file format.
- \* Send the XML order files to an FTP file location.

Dynamics 365 Commerce must meet the following requirements:

- \* Serve as the inventory system of record.
- \* Serve as the retail sales and financial system of record.
- \* Provide point-of-sale (POS) capabilities in store.
- \* Provide the ability for e-commerce customers to pick up orders in store.
- \* Update the status of the sales order to prevent it from being fulfilled multiple times.

The custom retail POS solution must meet the following requirements:

- \* Import retail transactions from all stores into Dynamics 365 Commerce.
- \* Produce a single pipe-delimited file of all daily sales transactions by store.
- \* Continue to operate for six months before it is deprecated.

You need to create data integrations for the business processes.

Which integration patterns should you use? To answer, drag the appropriate patterns to the correct requirements. Each pattern may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

### NEW QUESTION # 133

A company plans to implement Dynamics 365 Supply Chain Management.

You are a solution architect and need to prepare a Solution Blueprint document for this implementation.

You need to classify the requirements by type.

What is the classification for each requirement? To answer, drag the appropriate classifications to the correct requirements. Each classification may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

**Answer:**

Explanation:

Explanation

Box 1: Non-functional

Requirements are commonly referred to as either functional or non-functional. Functional requirements describe what the solution needs to do or its behaviors, and non-functional requirements commonly describe non-behavior aspects of the solution such as performance requirements.

The following examples are of well-composed non-functional requirements:

Average screen load time for internal users that are not mobile will be less than three seconds.

External portal must be able to handle 100 concurrent users who are performing case submission.

Any credit card number that is used cannot be stored in Common Data Service environment.

Box 2: Functional

Example functional requirements

The following scenarios describe simple examples of functional requirements:

As a sales user, I need to be able to close an opportunity as lost and then capture why it was lost so that we can improve our sales tactics in the future.

As a sales manager, I need to be able to approve a discount on a quote so that I can reduce the total price and give a discount to the

customer.

As a staff accountant, I want to be prevented from closing a batch that has pending items so that I do not have to reopen it later.

Box 3: Non-functional

Examples of common non-functional requirement types include:

Availability

Compliance/regulatory

\* -> Data retention/residency

Performance (response time, and so on)

Privacy

Recovery time

Security

Scalability
