Die Feedbacks von den IT-Fachleuten, die BCS CTFL4 Zertifizierungsprüfung erfolgreich bestanden haben, haben bewiesen, dass ihren Erfolg DeutschPrüfung beizumessen ist. Die Fragen und Antworten zur BCS CTFL4 Zertifizierungsprüfung haben ihnen sehr geholfen. Dabei erspart DeutschPrüfung ihnen auch viele wertvolle Zeit und Energie. Sie haben die BCS CTFL4 Zertifizierungsprüfung ganz mühelos beim ersten Versuch bestanden. So ist DeutschPrüfung eine zuverlässige Website. Wenn Sie DeutschPrüfung wählen, sind Sie der nächste erfolgreiche IT-Fachmann. DeutschPrüfung würde Ihren Traum verwirklichen.

BCS CTFL4 Prüfungsplan:

Thema	Einzelheiten
Thema 1	<ul style="list-style-type: none">• Fundamentals of Testing: It discusses the basic principles related to testing. The topic evaluates your understandings about the test process.
Thema 2	<ul style="list-style-type: none">• Static Testing: The topic covers static testing basics, the feedback and review process.
Thema 3	<ul style="list-style-type: none">• Testing Throughout the Software Development Lifecycle: This topic explains how testing is incorporated into different development approaches. It also focuses on the concepts of test-first approaches.
Thema 4	<ul style="list-style-type: none">• Test Analysis and Design: It focuses on black-box and the collaboration-based test approach.
Thema 5	<ul style="list-style-type: none">• Managing the Test Activities: This topic explains how to plan tests in general, monitor and control test activities, and report defects in a clear and understandable way.

CTFL4 German - CTFL4 Tests

Viele Leute meinen, man braucht viel fachliche IT-Kenntnisse, um die schwierigen BCS CTFL4 IT-Zertifizierungsprüfung zu bestehen. Nur diejenigen, die umfassende IT-Kenntnisse besitzen, sind qualifiziert dazu, sich an der BCS CTFL4 Prüfung zu beteiligen. Jetzt gibt es viele Methoden, die Ihre unausreichenden Fachkenntnisse wettmachen. Sie können sogar mit weniger Zeit und Energie als die fachlich gutqualifizierten die BCS CTFL4 Prüfung auch bestehen. Wie es heißt, viele Wege führen nach Rom.

BCS ISTQB Certified Tester Foundation Level CTFL 4.0 CTFL4 Prüfungsfragen mit Lösungen (Q24-Q29):

24. Frage

As a result of the joint evaluation of a product version with the customer, it has been concluded that it would be appropriate to retrieve an earlier version of the product and carry out a benchmark. Depending on the result, further development will be carried out based on the current version or the retrieved version.

Which mechanism, process, and/or technique will allow the specific version (including the testing work products) of a given software product to be restored?

- A. Change management
- B. Defect management
- C. Risk management
- **D. Configuration management**

Antwort: D

Begründung:

Comprehensive and Detailed In-Depth Explanation: Configuration management (B) ensures that versions of software and test artifacts are properly tracked, stored, and retrievable. It allows teams to:

- * Restore earlier versions of software and test work products
- * Maintain traceability between requirements, tests, and code
- * Avoid discrepancies due to mismanaged versions
- * (A) is incorrect because defect management tracks issues but does not restore versions.
- * (C) is incorrect because change management controls changes but does not track past versions.
- * (D) is incorrect because risk management assesses risks but does not manage software versions.

Effective configuration management ensures the ability to roll back changes and maintain system stability.

25. Frage

Confirmation testing is performed after:

- A. a defect is fixed and after other tests do not find any side-effect introduced in the software as a result of such fix
- **B. a defect is fixed, and if such testing is successful then the regression tests that are relevant for such fix can be executed**
- C. the execution of an automated regression test suite to confirm the absence of false positives in the test results
- D. a failed test, and aims to run that test again to confirm that the same behavior still occurs and thus appears to be reproducible

Antwort: B

Begründung:

Confirmation testing is performed after a defect is fixed, and if such testing is successful then the regression tests that are relevant for such fix can be executed. Confirmation testing, also known as re-testing, is the process of verifying that a defect has been resolved by running the test case that originally detected the defect. Confirmation testing is usually done before regression testing, which is the process of verifying that no new defects have been introduced in the software as a result of changes or fixes. Therefore, option D is the correct answer.

26. Frage

Which ONE of the following options MOST ACCURATELY describes statement testing?

- A. In statement testing, the coverage items are control flow transfers between branches. The aim is to design test cases to exercise branches in the code until an acceptable level of coverage is achieved, expressed as a percentage.
- B. In statement testing, the coverage items are branches, and the aim is to design test cases to exercise branches in the code until an acceptable level of coverage is achieved, expressed as a percentage.
- **C. In statement testing, the coverage items are executable statements. The aim is to design test cases that exercise statements in the code until an acceptable level of coverage is achieved, expressed as a percentage.**
- D. In statement testing, the coverage items are decisions and statements. The aim is to design test cases that exercise statements in the code until an acceptable level of coverage is achieved, expressed as a percentage.

Antwort: C

Begründung:

Comprehensive and Detailed In-Depth Explanation: Statement testing aims to execute every executable statement in the source code at least once.

- * (D) is correct as statement testing ensures maximum statement execution.
- * (A) describes branch testing, which focuses on flow transfers.
- * (B) and (C) incorrectly mix decision testing and branch testing concepts.

27. Frage

The following chart represents metrics related to testing of a project that was completed. Indicate what is represented by the lines A, B and the axes X, Y

- A. X - Time
Y - Cost
A - Cost of test (per week)
B - Cost of finding a single bug (per week)
- B. X - Time
Y - Percent
A - % of functional tests in the test suite
B - % of non-functional tests in the test suite
- C. X - Time
Y - Number of defects
A - Number of open defects
B - Number of closed defects
- D. X - Time
Y - Count
A - Total number of executed tests
B - Number of open bugs

Antwort: D

Begründung:

Option D correctly explains what is represented by the lines A, B and the axes X, Y in a testing metrics chart. According to option D:

X-axis represents Time

Y-axis represents Count

Line A represents Number of open bugs

Line B represents Total number of executed tests

This information is essential in understanding and analyzing the testing metrics of a completed project.

28. Frage

You are testing a system that is used in motor vehicles to warn the driver of an obstacle when re-versing. Output is provided by a series of LED lights (green, yellow, and red), each illuminated based on clearly defined conditions.

The following summary describes the functionality:

* Object within 10 metres, green LED lit.

* Object within 5 metres, yellow LED lit.

* Object within 1 metre, red LED lit.

* Setting sensitivity mode to "ON" will result in only the red LED being lit when the object is within 1 metre.

The following decision table describes the rules associated with the functioning of this proximity warning system:

Conditions	Rule 1	Rule 2	Rule 3	Rule 4	Rule 5	Rule 6
Distance < 10 m	Y	N	N	Y	N	N
Distance < 5 m	N	Y	N	N	Y	N
Distance < 1 m	N	N	Y	N	N	Y
Sensitivity ON	N	N	N	Y	Y	Y

Actions	Rule 1	Rule 2	Rule 3	Rule 4	Rule 5	Rule 6
Green LED	Y	N	N	N	N	N
Yellow LED	N	Y	N	N	N	N
Red LED	N	N	Y	N	N	Y

Which intended functionality is tested by Rule 5 in the decision table?

- A. Object is within 5 metres of the vehicle and the sensitivity mode is switched "on", resulting in the yellow LED being lit.
- B. Object is within 5 metres of the vehicle and the sensitivity mode is switched "off", resulting in no LED being lit.
- **C. Object is within 5 metres of the vehicle and the sensitivity mode is switched "on", resulting in no LED being lit.**
- D. Object is within 5 metres of the vehicle and the sensitivity mode is switched "off", resulting in the yellow LED being lit.

Antwort: C

Begründung:

Rule 5 in the decision table indicates that when the object is within 5 metres of the vehicle and the sensitivity mode is switched "on", no LED is lit. This matches the conditions and actions described in the decision table provided, ensuring that only the red LED is lit when the sensitivity mode is on and the object is within 1 metre, otherwise no LED is lit .

29. Frage

.....

Die BCS CTFL4 Zertifizierungsprüfung ist zur Zeit sehr beliebt bei den IT-Fachleuten. Durch die BCS CTFL4 Zertifizierungsprüfung werden Ihre Lebens-und Arbeitsverhältnisse verbessert. Daneben wird Ihre Position in der IT-Branche gefestigt.
