

최신 EMC Servers D-PE-OE-01 무료샘플문제 (Q320-Q325):

질문 # 320

Which is a feature of an AMD processor in a PowerEdge server?

- A. Secure Encrypted Virtualization
- B. Fastest processor speeds
- C. Up to 60 cores
- D. Supports up to four sockets

정답: A

설명:

Understanding Features of AMD Processors in Dell PowerEdge Servers Server Components (26%) Define the different processor, memory options, and memory configurations Analyze server security features Overview AMD processors, specifically the AMD EPYC series, are utilized in Dell PowerEdge servers to provide high performance, scalability, and advanced security features. One of the standout features of AMD processors is Secure Encrypted Virtualization (SEV).

Explanation of Options

Option A: Supports up to four sockets

AMD EPYC processors in current Dell PowerEdge servers typically support up to two sockets. Intel processors are more commonly associated with supporting up to four sockets in server configurations.

Conclusion: Incorrect.

Option B: Up to 60 cores

AMD EPYC processors offer up to 64 cores per processor. While "up to 60 cores" is close, it does not fully capture the maximum core count offered.

Conclusion: While partially correct, not the most distinctive feature.

Option C: Fastest processor speeds

Processor speeds vary depending on specific models and configurations. Both AMD and Intel offer processors with high clock speeds. Claiming the "fastest processor speeds" is subjective and not a definitive feature.

Conclusion: Not a unique feature.

Option D: Secure Encrypted Virtualization

SEV is a security feature unique to AMD processors. It allows for the encryption of virtual machine memory, providing isolation between VMs and enhancing security in virtualized environments.

Features:

Encrypts VM memory with individual keys.

Protects against hypervisor-level attacks.

Enhances data security and compliance.

Conclusion: Correct Answer.

Dell Operate Reference

Server Components (26%):

Define the different processor, memory options, and memory configurations: Understanding the features and capabilities of AMD processors in server environments.

Analyze server security features: SEV is a significant security feature offered by AMD processors, enhancing virtualization security.

Conclusion

The standout feature of AMD processors in Dell PowerEdge servers is Secure Encrypted Virtualization, which enhances security in virtualized environments by encrypting VM memory.

질문 # 321

A server has both processor sockets populated. An adapter card in the server is not functioning. However, no errors are displayed. The technician reboots the server, enters the System Setup utility, and selects System BIOS.

What should the technician do before replacing the adapter card?

- A. Select Processor Settings, Verify that the slots associated with processor 1 are enabled
- B. Select Integrated Device Settings > Slot Disablement, Verify that the adapter slot is enabled
- C. Select Device Settings, Reset the adapter card to default settings
- D. Select System Profile > Custom, Verify that the adapter slots for both processors are enabled

정답: B

질문 # 322

A technician tries to power on a server but nothing happens when they press the power button. The status LEDs on both PSUs are green. The technician is able to connect to the iDRAC to review the System Event Logs and discovers that PSU2 has failed.

- A. Reboot the server, Reset the NVRAM
- B. Cycle the AC power, Reset the NVRAM
- **C. Cycle the AC power, Test one PSU at a time**
- D. Reboot the server, Test one PSU at a time

정답: C

질문 # 323

When does a customer require the Service Tag of the Dell EMC PowerEdge server?

- A. First time logging in to iDRAC
- **B. Obtaining warranty information**
- C. Activating the OS
- D. First time accessing the BIOS

정답: B

질문 # 324

What is a systems management console solution optimized for monitoring and managing Dell enterprise and remote office hardware?

- A. iDRAC9
- B. iSM
- C. SupportAssist Enterprise
- **D. OpenManage Essentials**

정답: D

질문 # 325
