With all types of 1z0-076 test guide selling in the market, lots of people might be confused about which one to choose. Many people can't tell what kind of 1z0-076 study dumps and software are the most suitable for them. Our company can guarantee that our 1z0-076 Actual Questions are the most reliable. Having gone through about 10 years' development, we still pay effort to develop high quality 1z0-076 study dumps and be patient with all of our customers, therefore you can trust us completely.

## Oracle 1z0-076 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Managing Oracle Net Services in a Data Guard Environment: The section focuses on Oracle Net Services and its role in Data Guard networking setup.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Monitoring a Data Guard Broker Configuration: The topic covers the use of Enterprise Manager and DGMGRL to monitor Data Guard configurations and explains the various data protection modes available.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Enhanced Client Connectivity in a Data Guard Environment: This topic focuses on enhancing client connectivity in a Data Guard setup and implementing failover procedures for seamless client redirection. It also covers application continuity to ensure uninterrupted operations during role transitions.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Oracle Data Guard Broker Basics: An overview of the Data Guard broker, its architecture, components, benefits, and configurations, is provided here. It serves as an introduction to the tool used for managing Data Guard configurations.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>Using Oracle Active Data Guard: Supported Workloads in Read-Only Standby Databases: Here, the usage of physical standby databases for real-time queries is discussed.</li> </ul>
Topic 7	<ul style="list-style-type: none"> <li>Patching and Upgrading Databases in a Data Guard Configuration: This section provides guidance on patching and upgrading databases in a Data Guard environment, along with performance optimization techniques and monitoring considerations.</li> </ul>
Topic 8	<ul style="list-style-type: none"> <li>Backup and Recovery Considerations in an Oracle Data Guard Configuration: In this topic, Backup and recovery procedures in a Data Guard configuration are discussed, including RMAN backups, offloading to physical standby, and network-based recovery.</li> </ul>
Topic 10	<ul style="list-style-type: none"> <li>Oracle Data Guard Basics: This topic covers the essential architecture and concepts of Oracle Data Guard. It includes sub-topics such as the physical and logical standby database comparison, benefits of Data Guard, and its integration with multi-tenant databases.</li> </ul>

Topic 11	<ul style="list-style-type: none"> <li>Managing Physical Standby Files After Structural Changes on the Primary Database: The topic covers managing structural changes in the primary database and their impact on physical standby files.</li> </ul>
Topic 12	<ul style="list-style-type: none"> <li>Performing Role Transitions: Here, the concept of database roles is explained, along with the steps for performing switchovers, failovers, and maintaining physical standby sessions during role transitions.</li> </ul>

We always try to find ways to accelerate our customers' professional ability and offer the best quality of 1z0-076 dumps pdf among dumps vendors. So we decided to create the 1z0-076 real dumps based on the requirement of the certification center and cover the most knowledge points of 1z0-076 Practice Test. Our study guide will be your first choice as your exam preparation materials.

### Oracle Database 19c: Data Guard Administration Sample Questions (Q12-Q17):

#### NEW QUESTION # 12

You are licensed to use Oracle Active Data Guard.

Which TWO statements are true after enabling block change tracking on a physical standby database?

- A. It allows fast incremental backups to be offloaded to a snapshot standby database, when the physical standby database is converted.
- B. It starts the CTWR process on the primary database instance.
- C. It allows fast incremental backups to be offloaded to the physical standby database.
- D. It starts the CTWR process on the physical standby database instance.
- E. It allows fast incremental backups to be taken on the primary database.
- F. It starts the RVWR process on the physical standby database instance.

**Answer: C,F**

Explanation:

Block change tracking is a feature that enhances the efficiency of incremental backups by recording changed blocks in a tracking file. When used with Oracle Active Data Guard:

It starts the RVWR process on the physical standby database instance (A): When block change tracking is enabled on a physical standby database, the Recovery Writer (RVWR) process is initiated. This process is responsible for recording the changes to blocks in the block change tracking file, which is then used to optimize incremental backups.

It allows fast incremental backups to be offloaded to the physical standby database (E): With block change tracking enabled on the physical standby database, fast incremental backups can be offloaded from the primary database. This reduces the workload on the primary database and utilizes the standby database for backup operations, improving overall system performance and efficiency.

#### NEW QUESTION # 13

Examine the Data Guard configuration:

```
DGMGRL> show configuration;
```

```
Configuration - Animals
```

```
Protection Mode: MaxAvailability
```

```
Databases:
```

```
dogs - Primary database
```

```
cats - Snapshot standby database
```

```
sheep - Snapshot standby database
```

```
Fast-Start Failover: DISABLED
```

```
Configuration Status:
```

```
ORA-01034: ORACLE not available
```

ORA-16625: cannot reach database "dogs"

DGM-17017: unable to determine configuration status

ou wish to perform a failover to sheep. Which command, or sequence of commands, should you issue to the broker before executing failover to sheep; using the broker?

- A. DGMGRL> convert database cats to physical standby;
- B. DGMGRL> convert database cats to physical standby;
- C. DGMGRL> convert database sheep to physical standby;  
DGMGRL> edit configuration set protection mode as maxperformance;  
DGMGRL> convert database sheep to physical standby;
- D. None, because you can directly failover to a Snapshot Standby Database.
- E. **DGMGRL> convert database sheep to physical standby;**

**Answer: E**

#### NEW QUESTION # 14

Suppose that you manage the following databases in your environment:

\* boston: Primary database with a single PDB called DEVI

\* london: Physical standby database protecting the PDB called DEVI

\* orcl: Stand-alone database with a single PDB called PDB1 as a remote clone source You are planning to run the following command to create a remote clone in the primary database (boston) using pdbi in orcl:

Which are the THREE prerequisites for automating instantiation of the PDB in the standby database (london)?

- A. Set standby\_pdb\_source\_file\_dblink to clone\_link in the london database.
- **B. Set STANDBY\_FILE\_MANAGEMENT to auto in the london database.**
- C. Enable Active Data Guard in the \_ondon database.
- **D. Open PDB1 (remote clone source) in Read Only.**
- E. Open PDB1 (remote clone source) in Read Write.
- **F. Set STANDBY\_PDB\_SOURCE\_FILE\_DIRECTORY to <location of the PDB> in the london database.**

**Answer: B,D,F**

Explanation:

To automate the instantiation of a PDB in the standby database after creating a remote clone in the primary database, certain conditions must be met:

Open PDB1 (remote clone source) in Read Only (A): The source PDB from which the clone is created must be open in read-only mode to ensure a consistent state during cloning.

Set STANDBY\_PDB\_SOURCE\_FILE\_DIRECTORY to <location of the PDB> in the london database (C): This parameter specifies the location on the standby database where the files from the source PDB should be placed.

Set STANDBY\_FILE\_MANAGEMENT to auto in the london database (F): This parameter automates the management of file changes on the standby database when structural changes occur on the primary database, ensuring that the clone operation is reflected automatically on the standby.

#### NEW QUESTION # 15

Which two are prerequisites for configuring flashback database for Oracle 19c databases, in a Data Guard environment?

- A. The Data Guard real-time apply feature must be enabled.
- **B. The database must be in ARCHIVELOG mode.**
- **C. A fast recovery area must be configured.**
- D. A far sync instance must be configured to flash back a standby when the primary has been flashed back.
- E. The data guard broker must be used.

**Answer: B,C**

Explanation:

\* A fast recovery area must be configured (B): Flashback Database requires a fast recovery area to be set up because flashback

logs are stored there. The fast recovery area is a unified storage location for all recovery-related files and activities.

\* The database must be in ARCHIVELOG mode (C): Flashback Database operation relies on the ability to archive redo logs. Therefore, the database must be running in ARCHIVELOG mode for Flashback Database to be enabled.

### NEW QUESTION # 16

Examine this validate command:

```
DGMGRL> VALIDATE DATABASE VERBOSE "<database name>";
```

Which THREE statements are TRUE?

- A. The command performs a comparison of SPFILE entries between the primary database and a specified standby database.
- **B. The command performs a comprehensive set of database checks prior to a role change.**
- **C. The command can be used for a logical standby database.**
- **D. The command performs network connectivity checks between members of a broker configuration.**
- E. The command uses information available in various Oracle Data Guard views as well as the Automatic Diagnostic Repository.

**Answer: B,C,D**

Explanation:

\* The command performs a comprehensive set of database checks prior to a role change (A): The VALIDATE DATABASE command in Data Guard Manager (DGMGRL) is designed to perform an exhaustive check of a specified database's readiness for a role change, such as a switchover or failover.

\* The command performs network connectivity checks between members of a broker configuration (C): One of the checks includes verifying that the necessary network connectivity exists between the databases in a Data Guard Broker configuration.

\* The command can be used for a logical standby database (D): The VALIDATE DATABASE command is versatile and can be used for both physical and logical standby databases to ensure their readiness for role changes.
