You will pass the Chrome-Enterprise-Administrator exam after 20 to 30 hours' learning with our Chrome-Enterprise-Administrator study material. If you fail to pass the exam, we will give you a refund. Many users have witnessed the effectiveness of our Chrome-Enterprise-Administrator Guide braindumps you surely will become one of them. Try it right now! And we will let you down.

Google Professional Chrome Enterprise Administrator Certification Exam Sample Questions (Q39-Q44):

NEW QUESTION # 39

A browser administrator is looking to deploy Chrome Enterprise Core and build a configuration that supports both managed device browsers as well as managed profiles Company

- Employees
- Users
- Contractors

If this is the current organizational unit (OU) structure in the Google Admin console, which change should the administrator make to the structure to support the desired use case?

- A. Create a Managed Browsers OU nested under the Users OU
- B. Create a Managed Browsers OU nested under the Contractors OU
- C. Create a Managed Browsers OU nested under the Employees OU
- **D. Create a Managed Browsers OU nested under the Company OU**

Answer: D

Explanation:

To effectively manage both managed device browsers (which apply policies at the device level) and managed profiles (which apply policies at the user profile level), creating a separate OU at the top level (under "Company") or directly under it, specifically for "Managed Browsers," is the recommended approach. This allows for distinct policies tailored to the browser instance, regardless of the user signed in. Nesting under specific user OUs (Employees, Users, Contractors) would complicate the management of shared devices or scenarios where different user types might use the same managed browser.

NEW QUESTION # 40

An organization has a critical extension that is force-installed on managed Chrome browsers to meet specific security needs. Additionally, the organization has specified that when extensions are unpublished from the Chrome Web Store, they are also disabled. The extension has been taken over by a malicious actor and has been unpublished from the Chrome Web Store. What impact will this have to the force-installed extension?

- **A. The force-installed extension will automatically be disabled**
- B. The force-installed extension will observe no change
- C. The admin will receive an alert in the Google Admin console to remediate the conflict
- D. The force-installed extension will be disabled for existing users only

Answer: A

Explanation:

If an extension that is force-installed via policy is unpublished from the Chrome Web Store, the Chrome browser will detect this status and automatically disable the extension on managed devices. This is a security mechanism to prevent the continued use of potentially compromised or no longer maintained extensions.

NEW QUESTION # 41

A company deploys policies in a hybrid manner from both on premises and the Google Admin console. How would policies set in chrome://policy?

- A. Level: Mandatory, Source: Platform
- **B. Level: Mandatory, Source: Cloud**

- C. Level: Recommended, Source: Cloud
- D. Applies To: Machine, Source: Cloud

Answer: B

Explanation:

When viewing applied Chrome policies in the `chrome://policy` internal page, policies enforced through Chrome Enterprise Core (the cloud management console) will typically be labeled with a "Source" of

"Cloud." If the administrator has enforced the policy, the "Level" will likely be "Mandatory," indicating that users cannot change this setting. "Platform" would refer to policies set locally on the operating system (like Group Policy on Windows). "Recommended" policies are suggestions that users can typically override.

NEW QUESTION # 42

An administrator is modifying a policy at the top-level organizational unit (OU), and there is an OU below that should not accept this modification. What can the administrator do to be certain of this*?

- A. Set policy precedence to Child > Parent
- B. Set the policy to locally applied at the parent OU
- C. Set the policy to locally applied at the child OU
- D. Turn off inheritance for all policies

Answer: C

Explanation:

To prevent a child OU from inheriting a policy set at a parent OU, the administrator needs to configure the policy within the child OU itself and set its inheritance status to "Locally applied." This explicitly overrides the inherited policy from the parent with a specific setting for the child OU. Setting it to locally applied at the parent would not prevent inheritance. Turning off inheritance entirely might not be desired for other policies, and "Child > Parent" is the default precedence when inheritance is enabled.

NEW QUESTION # 43

Where can information about all of the profiles associated with a browser be found*?

- A. Managed devices
- B. Chrome log events
- C. Chrome Insights report
- D. Managed browsers detail

Answer: D

Explanation:

The "Managed browsers detail" page in the Google Admin console provides specific information about individual managed Chrome browser instances. This includes details about the profiles associated with that browser, such as the signed-in users and their management status. Chrome log events might contain some profile-related information but are more focused on actions. The "Managed devices" section primarily focuses on ChromeOS devices. The "Chrome Insights report" provides a high-level overview rather than detailed profile information for a specific browser instance.

NEW QUESTION # 44

.....

We hold coherent direction with our exam candidates, so our Chrome-Enterprise-Administrator study materials are compiled in modern format. Many competitors simulate and strive to emulate our standard, but our Chrome-Enterprise-Administrator training braindumps outstrip others in many aspects, so it is incumbent on us to offer help. Considering the current plea of our exam candidates we make up our mind to fight for your satisfaction and wish to pass the Chrome-Enterprise-Administrator Exam.
