## Microsoft GitHub Foundations Sample Questions (Q37-Q42):

### NEW QUESTION # 37

What is the difference between an organization member and an outside collaborator?

- A. Organization base permissions do not apply to outside collaborators.
- B. Outside collaborators do not consume paid licenses.
- C. Outside collaborators cannot be given the admin role on a repository.
- D. Two-factor authentication (2FA) is not required for outside collaborators.

**Answer: A**

Explanation:

In GitHub, an organization member is a user who has been added to an organization and is subject to the organization's base permissions and policies. An outside collaborator is a user who is not a member of the organization but has been granted access to one or more repositories within the organization.

Here's the difference between an organization member and an outside collaborator:

Organization Members:

Members are subject to the organization's base permissions, which apply across all repositories within the organization. These permissions might include read, write, or admin access, depending on what has been set as the default.

Members consume paid licenses if the organization is on a paid plan.

Members are required to have two-factor authentication (2FA) if the organization enforces it.

Outside Collaborators:

Outside collaborators do not have organization-wide permissions. They only have access to specific repositories to which they have been granted permission. This means organization base permissions do not apply to them (making option A correct).

Outside collaborators do not consume paid licenses. They are only counted toward the license if they are made organization members.

Outside collaborators can be granted any level of permission, including the admin role on specific repositories.

Two-factor authentication (2FA) can be enforced for outside collaborators at the repository level, depending on the organization's security settings.

Given this information, option A is the correct answer: "Organization base permissions do not apply to outside collaborators."

GitHub Documentation: Roles in an organization

GitHub Documentation: About outside collaborators

GitHub Documentation: Managing repository access for your organization

### NEW QUESTION # 38

Which of the following is the recommended primary method by GitHub for configuring Two-Factor Authentication (2FA) on your account?

- A. SMS text messages
- B. GitHub security alerts
- C. Email-based verification
- D. Time-based one-time password (TOTP) application **right**

**Answer: D**

Explanation:

GitHub recommends using a TOTP authentication app, such as Google Authenticator or Authy, as the primary method for Two-Factor Authentication (2FA) because it provides stronger security than SMS-based authentication. TOTP generates time-sensitive one-time codes that are used alongside your password to verify your identity, helping protect your account from unauthorized access.

Option B is CORRECT because GitHub strongly recommends using a TOTP app (such as Google Authenticator, Authy, or 1Password) for 2FA due to its higher reliability and security compared to SMS.

### NEW QUESTION # 39

Which of the following statements most accurately describes secret gists?

- A. Anyone with the URL for the gist can view the gist.
- B. Anyone can see the gist from the gist Discover page.
- C. Users with assigned access can view the gist.
- D. Secret gists require GitHub Enterprise.

**Answer: A**

Explanation:

Secret gists on GitHub are "unlisted" gists, meaning they are not publicly discoverable but can be viewed by anyone who has the URL.

Visibility of Secret Gists:

Option A is correct because secret gists can be viewed by anyone who has the direct URL, making them accessible yet unlisted.

### NEW QUESTION # 40

Workflows can reference actions in:

(Each correct answer presents a complete solution. Choose three.)

- A. The same repository as your workflow file.
- B. An enterprise marketplace.
- C. Any public repository.
- D. A published Docker container image on Docker Hub.
- E. GitHub Packages.

**Answer: A,C,D**

Explanation:

As mentioned in the answer to Question no. 66, GitHub Actions workflows can reference actions from a variety of sources:

\* Any Public Repository:

\* Option A is correct. Actions can be sourced from any public GitHub repository.

\* The Same Repository as Your Workflow File:

\* Option B is correct. Actions within the same repository as the workflow file can be referenced directly.

\* A Published Docker Container Image on Docker Hub:

\* Option E is correct. Workflows can also use actions provided as Docker container images from Docker Hub.

\* Incorrect Options:

\* Option C and D are not relevant for directly referencing actions in workflows.

### NEW QUESTION # 41

What are the defining features of Git?

- A. Low-cost local branching, convenient staging areas, multiple workflows, and being designed for managing small projects
- B. Distributed version control, open source software, and being designed for handling projects of any size with efficiency
- C. Centralized version control, proprietary software, and being designed for small projects
- D. Sequential version control, cloud-based hosting service, and being designed for collaboration on large projects

**Answer: B**

Explanation:

Git is a widely-used version control system that has several defining features:

**Distributed Version Control:**

Git is a distributed version control system, meaning that every developer has a full copy of the entire repository, including its history, on their local machine. This enables greater flexibility, as work can be done offline and each user has access to the full project history.

**Open Source Software:**

Git is open-source, meaning its source code is freely available for use, modification, and distribution. This fosters a large community of users and contributors who continuously improve the software.

**Efficiency with Large Projects:**

Git is designed to handle projects of any size with speed and efficiency. It can manage large codebases and many contributors without significant performance degradation, making it suitable for everything from small personal projects to large, complex software systems.

## NEW QUESTION # 42

.....

Grasping different consumers' learning situation in a comprehensive way, the operation system of our GH-900 practice materials can adapt to different consumer groups. Facts speak louder than words. Through years' efforts, our GH-900 exam preparation has received mass favorable reviews because the 99% pass rate of our GH-900 Study Guide is the powerful proof of trust of the public. No other vendor can do this like us, we are the unique and best GH-900 learning prep provider!
