Candidates are required to complete a set of tasks within a specified time frame and present their solution to a panel of experts.

Salesforce Certified B2C Commerce Architect Sample Questions (Q33-Q38):

NEW QUESTION # 33

There Is an Issue with the site when the domain Is opened from Google search results. After researching the problem. It turns out that the site returns * 404 page error when accessedwith a parameter in the URL.

What should the Architect recommend to fix that issue?

- A. Add this snippet to the aliases configuration for the domain
- **B. Add dynamic catch-all rule to redirect to home page.**
- C. Add dynamic redirect if the URL contains parameter to Home Show. Add this snippet to the aliases configuration for the domain
- D. Add this snippet to the aliases configuration for the domain:

Answer: B

Explanation:

To address the issue of the site returning a 404 error when accessed with a parameter from Google search results, a dynamic catch-all rule to redirect such requests to the homepage is an effective solution (Answer A).

This approach ensures that users landing from external links with appended parameters, which might not match any configured route or alias, are redirected to a valid page instead of seeing an error page. This improves the user experience and minimizes potential bounce rates caused by broken links or outdated URLs.

NEW QUESTION # 34

There is an issue with the site when the domain is opened from Google search results. After researching the problem, it turns out that the site returns a 404 page error when accessed with a parameter in the URL.

What should the Architect recommend to fix that issue?

- A. Add this snippet to the aliases configuration for the domain
- **B. Add this snippet to the aliases configuration for the domain:**
- C. Add dynamic catch-all rule to redirect to home page.
- D. Add dynamic redirect if the URL contains parameter to Home Show. Add this snippet to the aliases configuration for the domain

Answer: B

NEW QUESTION # 35

A client receives multiple feeds from third parties on the same SFTP location:

- * Product prices (sftp: prod/prices)
- * Stores information (sftp: prod/stores;
- * Product information (sftp: prod/catalog)
- * Categories information (sftp: prod/marketing)
- * Content (sftp: prod/marketing)

Some of the feeds are placed on sftp multiple times a day, as the information is updated in the source system.

The Architect decides to have only two jobs:

- * One that checks and downloads available feeds every hour
- * One that imports the files from Webdav once a day before the data replication, using the standard steps available in the Job Framework. Which design is correct for the import job, taking the steps scope in consideration?

- A. - four sibling flows execute steps in parallel: import products, stores, prices, content
- last flow executes steps in sequence: import categories, reindex
- **B. - Four sibling flows execute steps in parallel: import products, stores, price, content
- last flow executes steps in sequence: import categories, reindex**
- C. - three sibling flows import steps in parallel: import products, stores, prices
- fourth flow executes: import categories
- last flow executes steps in sequence: reindex, import content
- D. - four sibling flows execute steps in parallel: import products, stores, prices, content
- fifth flow executes: import categories
- last flow executes steps in sequence: reindex

Answer: B

NEW QUESTION # 36

A B2C Commerce Developer has just finished implementing a new promotion code form on checkout. During review, an Architect notes that the form is not using CSRF validation correctly.

```
<form action="{URLUtils.continueURL()}" method="GET">
  <!-- ... the form input elements ... -->
  <input type="hidden"
    name="{dw.web.CSRFProtection.getToken()}"
    value="{dw.web.CSRFProtection.generateToken()}" />
  <input type="submit" value="Apply Promotion Code" />
</form>

formResult = cartForm.handleAction({
  'addPromoCode': function (formgroup) {
    var CSRFProtection = require('dw/web/CSRFProtection');

    var status;
    var result = {
      cart: cart,
      EnableCheckout: true,
      dontRedirect: true
    };
    status = cart.addCoupon(formgroup.couponCode.htmlValue);
    /* ... some error handling code, based on the returned status ... */
    return result;
  }
});
```

Which two options are best practice recommendations for dealing with CSRF validation? Choose 2 answers

- A. Automatically renew the CSRF Token if expired.
- B. Only use POST methods over HTTPS.
- C. Only use GET methods over HTTPS.
- D. Ensure the CSRF protection is validated on form submission.

Answer: A,D

NEW QUESTION # 37

A client has a single site with multiple domains, locales, and languages. After launch, there is a need for the client to perform offline maintenance. The client would like to show the same maintenance page for each locale.

Which version of aliases,Json file below will accomplish this task?

- A. 
- B. 
- C. 
- D. 

Answer: B

Explanation:

Option C correctly addresses the requirement for showing the same maintenance page across multiple locales by having each different domain alias ("nto.eu", "nto.at", "nto.de") mapped to the same www domain ("www.nto.eu"). This setup allows all traffic, regardless of the original locale-specific domain, to be directed to a single, unified maintenance page hosted under the "www.nto.eu" domain. This ensures consistency in the maintenance message presented to all users, irrespective of their regional domain.
