

Reliable 010-160 Exam Online | Valid 010-160 Exam Questions

What's more, part of that Itbraindumps 010-160 dumps now are free: <https://drive.google.com/open?id=14SWWLAE5r8DdIaaaLijxWzvUnAu44T2>

010-160 exam dumps are valid and we have helped lots of candidates pass the exam successfully, and they send the thankful letter to us. 010-160 exam materials are edited and verified by professional experts, and they possess the professional knowledge for the exam, therefore you can use them at ease. In addition, we offer you free update for one, so you don't have to spend extra money on update version. We have online and offline chat service, and they possess the professional knowledge for 010-160 Exam Braindumps, if you have any questions, you can consult us, we are glad to help you.

Therefore, you must stay informed as per these changes to save time, money, and mental peace. As was already discussed, Itbraindumps satisfies the needs of Linux Essentials Certificate Exam - version 1.6 (010-160) exam candidates. The customer will receive updates of Linux Essentials Certificate Exam - version 1.6 (010-160) real dumps for up to 365 days after buying the product. Our offers don't stop here. If our customers want to evaluate the Linux Essentials Certificate Exam - version 1.6 (010-160) exam dumps before paying us, they can download a free demo as well.

Valid 010-160 Exam Questions | Exam 010-160 Reference

Because there are free trial services provided by our 010-160 preparation materials, by the free trial services you can get close contact with our products, learn about our 010-160 real test, and know how to choose the different versions before you buy our products. On the other hand, using free trial downloading before purchasing, I can promise that you will have a good command of the function of our 010-160 Test Prep. According to free trial downloading, you will know which version is more suitable for you.

Lpi 010-160 exam, also known as the Linux Essentials Certificate Exam, version 1.6, is a certification exam that focuses on the fundamental knowledge and skills required for using Linux operating systems. 010-160 exam is designed for individuals who are new to Linux or have limited experience with it. 010-160 Exam covers essential topics such as command-line basics, file management, text editing, and system security.

Lpi Linux Essentials Certificate Exam - version 1.6 Sample Questions (Q69-Q74):

NEW QUESTION # 69

What command displays manual pages? (Specify ONLY the command without any path or parameters.)

Answer:

Explanation:

man

Explanation:

The command that displays manual pages for Linux commands is the man command. The man command is used to display the manual pages for a given command or topic. For example, to view the manual page for the ls command, you can type:

man ls

This will open the manual page for the ls command in a pager, which allows you to scroll and search through the text. You can also specify the section number of the manual page if there are multiple pages with the same name. For example, to view the manual page for the passwd command in section 1, you can type:

man 1 passwd

The man command is one of the most useful and important commands for learning and using Linux. It provides detailed information about the syntax, options, arguments, examples, and other aspects of a command or topic. You can also use the --help option to get a brief summary of the usage and options of a command. For example, to get a quick help for the man command, you can type:

man --help

To learn more about the man command and how to use it effectively, you can refer to the following resources:

NEW QUESTION # 70

Which permissions are set on a regular file once the permissions have been modified with the command `chmod 654 file.txt`?

- A. drw-r-xr--
- B. -rw-r-xr--
- C. -wxr-x--x
- D. d-wxr-x--
- E. -rwxrw---x

Answer: B

Explanation:

Explanation

The chmod command is used to change the permissions of files and directories. The permissions are represented by three sets of three characters, indicating the permissions for the owner, the group, and the others. Each character can be either r (read), w (write), x (execute), or - (no permission). The chmod command can use either symbolic or numeric mode to specify the permissions. In this question, the numeric mode is used, which consists of three digits from 0 to 7. Each digit is the sum of the permissions for each set, where r is 4, w is 2, and x is 1. For example, 7 means rwx, 6 means rw-, and 4 means r-. Therefore, the command `chmod 654 file.txt` sets the permissions as follows:

* The first digit 6 means rw- for the owner, which means the owner can read and write the file, but not execute it.

* The second digit 5 means r-x for the group, which means the group can read and execute the file, but not write it.

* The third digit 4 means r-- for the others, which means the others can only read the file, but not write or execute it.

The resulting permissions are -rw-r-xr-, which is the correct answer. The other options are incorrect because they either have the wrong permissions or the wrong file type. A regular file does not have the d (directory) prefix, and a directory cannot have the - (no file type) prefix. References:

NEW QUESTION # 71

What is a Linux distribution?

- A. The Linux file system as seen from the root account after mounting all file systems.
- B. An operating system based on Linux but incompatible to the regular Linux kernel.
- C. A bundling of the Linux kernel, system utilities and other software.
- D. A set of changes to Linux which enable Linux to run on another processor architecture.

- E. The set of rules which governs the distribution of Linux kernel source code.

Answer: C

Explanation:

Explanation

A Linux distribution is a collection of software that is based on the Linux kernel and can be installed on a computer or a device to create a functional operating system. A Linux distribution typically includes the Linux kernel, a set of system utilities and libraries, a graphical user interface (GUI), a package manager, and various applications and services. A Linux distribution may also include additional software or features that are specific to the distribution's goals, target audience, or philosophy. For example, some Linux distributions are designed for desktop users, while others are optimized for servers, embedded systems, or security. Some Linux distributions are based on other Linux distributions, while others are developed independently. Some Linux distributions are free and open source, while others are proprietary or commercial. Some Linux distributions are popular and widely used, while others are niche or experimental. Some examples of Linux distributions are Ubuntu, Fedora, Debian, Mint, Arch, and Red Hat. References:

NEW QUESTION # 72

Which of the following are typical services offered by public cloud providers? (Choose three correct answers.)

- A. Internet as a Service(IaaS)
- B. Software as a Service (SaaS)
- C. Platform as a Service(PaaS)
- D. Infrastructure as a Service(IaaS)
- E. Graphics as a Service (GaaS)

Answer: B,C,D

NEW QUESTION # 73

What is true about the `dmesg` command? (Choose two correct answers.)

- A. It immediately outputs all new messages written to the system journal.
- B. It traces the execution of a command and shows each step the program carries out.
- C. It sends messages to the command lines of all current user sessions.
- D. It might not display older information because it was overwritten by newer information.
- E. It displays the content of the Linux kernel's ring buffer.

Answer: D,E

Explanation:

Explanation

The `dmesg` command is used to display the messages from the kernel that are stored in a ring buffer. A ring buffer is a fixed-size data structure that overwrites the oldest entries when it is full. Therefore, the `dmesg` command might not display older information because it was overwritten by newer information. The `dmesg` command is useful for troubleshooting system issues and checking hardware information. The `dmesg` command is not used to trace the execution of a command, send messages to user sessions, or output the system journal. Those functions are performed by other commands such as `strace`, `write`, and `journalctl` respectively. References: :
[`dmesg`] : [Ring buffer] : [`strace`] : [`write` (Unix)] : [`journalctl`][4]
