**NEW QUESTION # 20**
In the SAP BTP Cockpit, at which level is Trust Configuration available? Note: There are 2 correct answers to this question.

- A. Subaccount
- B. Directory
- C. Organization
- D. Global Account

**Answer: A,D**

Explanation:
In the SAP Business Technology Platform (BTP) Cockpit, Trust Configuration is available at both the Global Account and Subaccount levels. At the Global Account level, trust configurations define the identity provider (IdP) settings that apply across all subaccounts within the account, enabling centralized management of authentication for the entire BTP environment. This allows

administrators to establish a default IdP or configure custom IdPs for consistent user authentication. At the Subaccount level, trust configurations provide flexibility to override or customize the IdP settings specific to individual subaccounts, accommodating unique requirements for different applications or services. This dual-level approach ensures that organizations can balance global standardization with localized control. The Directory and Organization levels are not used for trust configurations in SAP BTP, as these are not part of the platform's security configuration hierarchy, making options C and D incorrect.
